

# PATHOLOGY

**INTERGEN**

In today's world, pathology and genetics are inseparable branches. In cancer studies, especially in the investigation of somatic mutations, two branches work together. Intergen is one of those rare centers that turn the culture of joint working into an advantage for the favor of the patients and have established both pathology and genetics laboratories together. By making a conjunct council between pathology and genetics, based on the clinical information and sample situation, the most accurate tests are determined for the patient

## Our services

- Pathology and Genetic Joint Evaluation
- Surgical Pathology
- Biopsy Examination
- Cytopathological Examination
- Cervicovaginal Smear Test
- Fine Needle Aspiration Biopsies
- Cytology in Body Fluids
- Immunohistochemistry (IHC) Staining
