(Adenin Fosforibosiltransferaz Eksikliği) (ACYP2 geni) (Tüm Gen Dizi Analizi) (Postnatal)	(Adenine phosphoribosyltransferase deficiency) (ACYP2 gene) (Sequence Analysis-All Coding Exons) (Postnatal)	ACYP2	ACYP2, ACYP	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	.	EDTA Blood Sample
Prader-Willi sendromu (PWS), Angelman sendromu (AS) (Delesyon + Metilasyon) (PWS/AS region (15q11-13), MKRN3, MAGEL2, NDN, SNRPN, UBE3A, ATP10A, GABRB3, OCA2) (MLPA)	(PWS), Angelman syndrome (AS) (deletion + methylation) (PWS / AS region (15q11-13), MKRN3, MAGEL2, NDN, SNRPN, UBE3A, ATP10A, GABRB3, OCA2)	PWS/AS region (15q11-13), MKRN3, MAGEL2, NDN, SNRPN, UBE3A, ATP10A, GABRB3, OCA2	.	MLPA	EDTA'lı Kan (2-4 ml)/ EDTA'lı Kemik İliği (2-3 ml)		20	60	.	.	30	Postnatal	.	EDTA Blood Sample / EDTA'lı kemik iliği
Prader-Willi sendromu (PWS), Angelman sendromu (AS) (Delesyon + Metilasyon) (PWS/AS region (15q11-13), MKRN3, MAGEL2, NDN, SNRPN, UBE3A, ATP10A, GABRB3, OCA2) (MLPA) (Prenatal)	(PWS), Angelman syndrome (AS) (deletion + methylation) (PWS / AS region (15q11-13), MKRN3, MAGEL2, NDN, SNRPN, UBE3A, ATP10A, GABRB3, OCA2) (MLPA) (Prenatal)	PWS/AS region (15q11-13), MKRN3, MAGEL2, NDN, SNRPN, UBE3A, ATP10A, GABRB3, OCA2	.	MLPA	Amniyon sıvısı / CVS / Heparinli ve EDTA'lı (İKİSİ BİRDEN) kordon kanı VE ANNEDEN EDTA'LI KAN		.	.	15	30	20	Prenatal	.	Amniotic Fluid / CVS / Heparinized and EDTA (BOTH) Fetal Blood and Maternal EDTA Blood Sample
[Asetilasyon, Yavaş], 243400, Otozomal Resesif (NAT2 geni) (Tüm Gen Dizi Analizi) (Postnatal)	[Acetylation, slow], 243400, Autosomal recessive (NAT2 gene) (Sequence Analysis-All Coding Exons) (Postnatal)	NAT2	NAT2, AAC2	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	.	EDTA Blood Sample
[Alfa-Aktinin-3 Eksikliği] (ACTN3 geni) (Tüm Gen Dizi Analizi) (Postnatal)	[Alpha-actinin-3 deficiency] (ACTN3 gene) (Sequence Analysis-All Coding Exons) (Postnatal)	ACTN3	ACTN3	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	.	EDTA Blood Sample
[AMP Deaminaz Eksikliği, Eritrositik], 612874, Otozomal Resesif (Adenosin Monofosfat Deaminaz Eksikliği) (AMPD3 geni) (Tüm Gen Dizi Analizi) (Postnatal)	[AMP deaminase deficiency, erythrocytic], 612874, Autosomal recessive (Adenosine monophosphate deaminase deficiency) (AMPD3 gene) (Sequence Analysis-All Coding Exons) (Postnatal)	AMPD3	AMPD3	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	.	EDTA Blood Sample
[Analjezi, Kappa-Opioid Reseptörü Agonistine Bağlı, Kadınlarla Özgül], 613098 (MC1R geni) (Tüm Gen Dizi Analizi) (Postnatal)	[Analgesia from kappa-opioid receptor agonist, female-specific], 613098 (MC1R gene) (Sequence Analysis-All Coding Exons) (Postnatal)	MC1R	MC1R, SHEP2, CMM5	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	.	EDTA Blood Sample
[Anjiyotensin I-Dönüştürücü Enzim, Benign Serum Yüksekmesi] (ACE geni) (Tüm Gen Dizi Analizi) (Postnatal)	[Angiotensin I-converting enzyme, benign serum increase] (ACE gene) (Sequence Analysis-All Coding Exons) (Postnatal)	ACE	ACE, DCP1, ACE1, MVCD3, ICH	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	.	EDTA Blood Sample
[Anhaptoglobinemi], 614081 (HP geni) (Tüm Gen Dizi Analizi) (Postnatal)	[Anhaptoglobinemia], 614081 (HP gene) (Sequence Analysis-All Coding Exons) (Postnatal)	HP	HP	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	.	EDTA Blood Sample
[Aquaporin-1 Eksikliği] (AQP1 geni) (Tüm Gen Dizi Analizi) (Postnatal)	[Aquaporin-1 deficiency] (AQP1 gene) (Sequence Analysis-All Coding Exons) (Postnatal)	AQP1	AQP1, CHIP28, CO	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	.	EDTA Blood Sample
[Aksiller Koku, Varyasyon], 117800, Otozomal Dominant (ABCC11 geni) (Tüm Gen Dizi Analizi) (Postnatal)	[Axillary odor, variation in], 117800, Autosomal dominant (ABCC11 gene) (Sequence Analysis-All Coding Exons) (Postnatal)	ABCC11	ABCC11, MRP8, EWWD, WW	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	.	EDTA Blood Sample
[Beta-Glikopiranozit Tatma] (TAS2R16 geni) (Tüm Gen Dizi Analizi) (Postnatal)	[Beta-glycopyranoside tasting] (TAS2R16 gene) (Sequence Analysis-All Coding Exons) (Postnatal)	TAS2R16	TAS2R16, T2R16	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	.	EDTA Blood Sample
[Bilirubin, Serum Düzeyi, QTL1], 601816 (UGT1A1 geni) (Tüm Gen Dizi Analizi) (Postnatal)	[Bilirubin, serum level of, QTL1], 601816 (UGT1A1 gene) (Sequence Analysis-All Coding Exons) (Postnatal)	UGT1A1	UGT1A1, UGT1, GNT1, BILIQTL1	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	DISEASE: Gilbert syndrome (GILBS) [MIM:143500]: Occurs as a consequence of reduced bilirubin transferase activity and is often detected in young adults with vague non-specific complaints. {ECO:0000269|PubMed:11013440, ECO:0000269|PubMed:12139570, ECO:0000269|PubMed:7715297, ECO:0000269|PubMed:9627603}. Note=The disease is caused by mutations affecting the gene represented in this entry.	EDTA Blood Sample
[Birbeck Granül Eksikliği], 613393 (CD207 geni) (Tüm Gen Dizi Analizi) (Postnatal)	[Birbeck granule deficiency], 613393 (CD207 gene) (Sequence Analysis-All Coding Exons) (Postnatal)	CD207	CD207, LANGERIN, CLEC4K	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	DISEASE: Birbeck granule deficiency (BIRGD) [MIM:613393]: A condition characterized by the absence of Birbeck granules in epidermal Langerhans cells. Despite the lack of Birbeck granules, Langerhans cells are present in normal numbers and have normal morphologic characteristics and antigen-presenting capacity. {ECO:0000269|PubMed:15816828}. Note=The disease is caused by mutations affecting the gene represented in this entry.	EDTA Blood Sample
[Kan Grubu Cromer], 613793 (CD55 geni) (Tüm Gen Dizi Analizi) (Postnatal)	[Blood group Cromer], 613793 (CD55 gene) (Sequence Analysis-All Coding Exons) (Postnatal)	CD55	CD55, DAF, CROM	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	.	EDTA Blood Sample
[Kan Grubu GIL], 607457 (AQP3 geni) (Tüm Gen Dizi Analizi) (Postnatal)	[Blood group GIL], 607457 (AQP3 gene) (Sequence Analysis-All Coding Exons) (Postnatal)	AQP3	AQP3	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	.	EDTA Blood Sample
[Kan Grubu, ABO Sistemi], 616093 (ABO geni) (Tüm Gen Dizi Analizi) (Postnatal)	[Blood group, ABO system], 616093 (ABO gene) (Sequence Analysis-All Coding Exons) (Postnatal)	ABO	ABO	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	.	EDTA Blood Sample
[Kan Grubu, Auberger Sistemi], 111200 (BCAM geni) (Tüm Gen Dizi Analizi) (Postnatal)	[Blood group, Auberger system], 111200 (BCAM gene) (Sequence Analysis-All Coding Exons) (Postnatal)	BCAM	LU, AU, BCAM	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	.	EDTA Blood Sample
[Kan Grubu, Colton], 110450 (AQP1 geni) (Tüm Gen Dizi Analizi) (Postnatal)	[Blood group, Colton], 110450 (AQP1 gene) (Sequence Analysis-All Coding Exons) (Postnatal)	AQP1	AQP1, CHIP28, CO	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	.	EDTA Blood Sample
[Kan Grubu, Diego], 110500 (SLC4A1 geni) (Tüm Gen Dizi Analizi) (Postnatal)	[Blood group, Diego], 110500 (SLC4A1 gene) (Sequence Analysis-All Coding Exons) (Postnatal)	SLC4A1	SLC4A1, AE1, EPB3, SPH4, SAO, CHC	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	.	EDTA Blood Sample
[Kan Grubu, Dombrock], 616060 (ART4 geni) (Tüm Gen Dizi Analizi) (Postnatal)	[Blood group, Dombrock], 616060 (ART4 gene) (Sequence Analysis-All Coding Exons) (Postnatal)	ART4	ART4, DO, DOK1	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	.	EDTA Blood Sample
[Kan Grubu, Duffy Sistemi], 110700, Otozomal Dominant (ACKR1 geni) (Tüm Gen Dizi Analizi) (Postnatal)	[Blood group, Duffy system], 110700, Autosomal dominant (ACKR1 gene) (Sequence Analysis-All Coding Exons) (Postnatal)	ACKR1	DARC, FY, GPD, WBCQ1	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	.	EDTA Blood Sample
[Kan Grubu, Froese], 601551 (SLC4A1 geni) (Tüm Gen Dizi Analizi) (Postnatal)	[Blood group, Froese], 601551 (SLC4A1 gene) (Sequence Analysis-All Coding Exons) (Postnatal)	SLC4A1	SLC4A1, AE1, EPB3, SPH4, SAO, CHC	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	.	EDTA Blood Sample
[Kan Grubu, Gerbich], 616089 (Sirtma) (GYPC geni) (Tüm Gen Dizi Analizi) (Postnatal)	[Blood group, Gerbich], 616089 (Matela) (GYPC gene) (Sequence Analysis-All Coding Exons) (Postnatal)	GYPC	GYPC, GE, GPC	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	.	EDTA Blood Sample
[Kan Grubu, Globosid Sistemi], 615021 (B3GALNT1 geni) (Tüm Gen Dizi Analizi) (Postnatal)	[Blood group, globoside system], 615021 (B3GALNT1 gene) (Sequence Analysis-All Coding Exons) (Postnatal)	B3GALNT1	B3GALT3, GLCT3, GLOB	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	.	EDTA Blood Sample
[Kan Grubu, I], 110800, Otozomal Dominant (GCNT2 geni) (Tüm Gen Dizi Analizi) (Postnatal)	[Blood group, I], 110800, Autosomal dominant (GCNT2 gene) (Sequence Analysis-All Coding Exons) (Postnatal)	GCNT2	GCNT2, I, CTRCT13	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	.	EDTA Blood Sample
[Kan Grubu, Hint Sistemi], 609027 (CD44 geni) (Tüm Gen Dizi Analizi) (Postnatal)	[Blood group, Indian system], 609027 (CD44 gene) (Sequence Analysis-All Coding Exons) (Postnatal)	CD44	CD44, MDU2, MDU3, MIC4, IN	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	.	EDTA Blood Sample
[Kan Grubu, John-Milton-Hagen Sistemi], 614745 (SEMA7A geni) (Tüm Gen Dizi Analizi) (Postnatal)	[Blood group, John-Milton-Hagen system], 614745 (SEMA7A gene) (Sequence Analysis-All Coding Exons) (Postnatal)	SEMA7A	SEMA7A, SEMAL, SEMAK1, CDW108, JMH	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	.	EDTA Blood Sample
[Kan Grubu, Kell], 110900 (KEL geni) (Tüm Gen Dizi Analizi) (Postnatal)	[Blood group, Kell], 110900 (KEL gene) (Sequence Analysis-All Coding Exons) (Postnatal)	KEL	KEL	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	.	EDTA Blood Sample
[Kan Grubu, Kidd], 111000 (SLC14A1 geni) (Tüm Gen Dizi Analizi) (Postnatal)	[Blood group, Kidd], 111000 (SLC14A1 gene) (Sequence Analysis-All Coding Exons) (Postnatal)	SLC14A1	SLC14A1, JK, UTE, UT1	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	.	EDTA Blood Sample
[Kan Grubu, Knops Sistemi], 607486 (CR1 geni) (Tüm Gen Dizi Analizi) (Postnatal)	[Blood group, Knops system], 607486 (CR1 gene) (Sequence Analysis-All Coding Exons) (Postnatal)	CR1	CR1, C3BR	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	.	EDTA Blood Sample
[Kan Grubu, Landsteiner-Wiener], 111250 (ICAM4 geni) (Tüm Gen Dizi Analizi) (Postnatal)	[Blood group, Landsteiner-Wiener], 111250 (ICAM4 gene) (Sequence Analysis-All Coding Exons) (Postnatal)	ICAM4	ICAM4, CD242, LW	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	.	EDTA Blood Sample
[Kan Grubu, Langereis Sistemi], 111600 (ABCB6 geni) (Tüm Gen Dizi Analizi) (Postnatal)	[Blood group, Langereis system], 111600 (ABCB6 gene) (Sequence Analysis-All Coding Exons) (Postnatal)	ABCB6	ABCB6, MTABC3, MCOPCB7, LAN, DUH3, PSHK2	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	.	EDTA Blood Sample
[Kan Grubu, Lewis] (FUT3 geni) (Tüm Gen Dizi Analizi) (Postnatal)	[Blood group, Lewis] (FUT3 gene) (Sequence Analysis-All Coding Exons) (Postnatal)	FUT3	FUT3, LE	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	.	EDTA Blood Sample
[Kan Grubu, Lüteryen Null], 247420, Otozomal Resesif (BCAM geni) (Tüm Gen Dizi Analizi) (Postnatal)	[Blood group, Lutheran null], 247420, Autosomal recessive (BCAM gene) (Sequence Analysis-All Coding Exons) (Postnatal)	BCAM	LU, AU, BCAM	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	.	EDTA Blood Sample
[Kan Grubu, Lüteryen Sistemi], 111200 (BCAM geni) (Tüm Gen Dizi Analizi) (Postnatal)	[Blood group, Lutheran system], 111200 (BCAM gene) (Sequence Analysis-All Coding Exons) (Postnatal)	BCAM	LU, AU, BCAM	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	.	EDTA Blood Sample
[Kan Grubu, MN] (GYPA geni) (Tüm Gen Dizi Analizi) (Postnatal)	[Blood group, MN] (GYPA gene) (Sequence Analysis-All Coding Exons) (Postnatal)	GYPA	GYPA, MN, GPA	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	.	EDTA Blood Sample
[Kan Grubu, OK], 111380 (BSG geni) (Tüm Gen Dizi Analizi) (Postnatal)	[Blood group, OK], 111380 (BSG gene) (Sequence Analysis-All Coding Exons) (Postnatal)	BSG	BSG	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	.	EDTA Blood Sample
[Kan Grubu, P1Pk Sistemi, S Fenotipi], 111400 (A4GALT geni) (Tüm Gen Dizi Analizi) (Postnatal)	[Blood group, P1Pk system, p phenotype], 111400 (A4GALT gene) (Sequence Analysis-All Coding Exons) (Postnatal)	A4GALT	A4GALT, P1PK	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	.	EDTA Blood Sample
[Kan Grubu, P1Pk Sistemi, P Fenotipi], 111400 (A4GALT geni) (Tüm Gen Dizi Analizi) (Postnatal)	[Blood group, P1Pk system, P phenotype], 111400 (A4GALT gene) (Sequence Analysis-All Coding Exons) (Postnatal)	A4GALT	A4GALT, P1PK	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	.	EDTA Blood Sample
[Kan Grubu, P1PK Sistemi, P(k) Fenotipi], 111400 (B3GALNT1 geni) (Tüm Gen Dizi Analizi) (Postnatal)	[Blood group, P1PK system, P(k) phenotype], 111400 (B3GALNT1 gene) (Sequence Analysis-All Coding Exons) (Postnatal)	B3GALNT1	B3GALT3, GLCT3, GLOB	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	.	EDTA Blood Sample
[Kan Grubu, Radin], 111620 (ERMAP geni) (Tüm Gen Dizi Analizi) (Postnatal)	[Blood group, Radin], 111620 (ERMAP gene) (Sequence Analysis-All Coding Exons) (Postnatal)	ERMAP	ERMAP, SC, RD	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	.	EDTA Blood Sample
[Kan Grubu, Ralph], 179620 (CD151 geni) (Tüm Gen Dizi Analizi) (Postnatal)	[Blood group, Raph], 179620 (CD151 gene) (Sequence Analysis-All Coding Exons) (Postnatal)	CD151	CD151, PETA3, SFA1, MER2	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	.	EDTA Blood Sample
[Kan Grubu, Rhesus], 111690 (RHCE geni) (Tüm Gen Dizi Analizi) (Postnatal)	[Blood group, Rhesus], 111690 (RHCE gene) (Sequence Analysis-All Coding Exons) (Postnatal)	RHCE	RHCE	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	.	EDTA Blood Sample
[Kan Grubu, Scianna Sistemi], 111750 (ERMAP geni) (Tüm Gen Dizi Analizi) (Postnatal)	[Blood group, Scianna system], 111750 (ERMAP gene) (Sequence Analysis-All Coding Exons) (Postnatal)	ERMAP	ERMAP, SC, RD	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	.	EDTA Blood Sample
[Kan Grubu, Ss] (GYPB geni) (Tüm Gen Dizi Analizi) (Postnatal)	[Blood group, Ss] (GYPB gene) (Sequence Analysis-All Coding Exons) (Postnatal)	GYPB	GYPB, SS, MNS	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	.	EDTA Blood Sample
[Kan Grubu, Swann], 601550 (SLC4A1 geni) (Tüm Gen Dizi Analizi) (Postnatal)	[Blood group, Swann], 601550 (SLC4A1 gene) (Sequence Analysis-All Coding Exons) (Postnatal)	SLC4A1	SLC4A1, AE1, EPB3, SPH4, SAO, CHC	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	.	EDTA Blood Sample
[Kan Grubu, Vel Sistemi], 615264, Otozomal Resesif (SMIM1 geni) (Tüm Gen Dizi Analizi) (Postnatal)	[Blood group, Vel system], 615264, Autosomal recessive (SMIM1 gene) (Sequence Analysis-All Coding Exons) (Postnatal)	SMIM1	SMIM1, VEL	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	.	EDTA Blood Sample
[Kan Grubu, Waldner], 112010 (SLC4A1 geni) (Tüm Gen Dizi Analizi) (Postnatal)	[Blood group, Waldner], 112010 (SLC4A1 gene) (Sequence Analysis-All Coding Exons) (Postnatal)	SLC4A1	SLC4A1, AE1, EPB3, SPH4, SAO, CHC	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	.	EDTA Blood Sample
[Kan Grubu, Wright], 112050 (SLC4A1 geni) (Tüm Gen Dizi Analizi) (Postnatal)	[Blood group, Wright], 112050 (SLC4A1 gene) (Sequence Analysis-All Coding Exons) (Postnatal)	SLC4A1	SLC4A1, AE1, EPB3, SPH4, SAO, CHC	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	.	EDTA Blood Sample
[Kan Grubu, Yt Sistemi], 112100 (ACHE geni) (Tüm Gen Dizi Analizi) (Postnatal)	[Blood group, Yt system], 112100 (ACHE gene) (Sequence Analysis-All Coding Exons) (Postnatal)	ACHE	ACHE, YT	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	.	EDTA Blood Sample
[Kan Basıncı Düzenleme QTL], 145500, Multifaktöriyel (SELE geni) (Tüm Gen Dizi Analizi) (Postnatal)	[Blood pressure regulation QTL], 145500, Multifactorial (SELE gene) (Sequence Analysis-All Coding Exons) (Postnatal)	SELE	SELE, ELAM1	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	.	EDTA Blood Sample
[Kan Basıncı Düzenleme QTL], 181500, Multifaktöriyel (RGS5 geni) (Tüm Gen Dizi Analizi) (Postnatal)	[Blood pressure regulation QTL], 145500, Multifactorial (RGS5 gene) (Sequence Analysis-All Coding Exons) (Postnatal)	RGS5	RGS5	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	.	EDTA Blood Sample

[Kan Basıncı Düzenleme QTL] 145500, Multifaktöriyel (ATP1B1 geni) (Tüm Gen Dizi Analizi) (Postnatal)	[Blood pressure regulation QTL], 145500, Multifactorial (ATP1B1 gene) (Sequence Analysis-All Coding Exons) (Postnatal)	ATP1B1	ATP1B1	Tüm Gen Dizi Analizi' Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	. It is due to abnormal serum albumin that binds T4 with enhanced affinity. {ECO:0000269|PubMed:7852505, ECO:0000269|PubMed:8048949, ECO:0000269|PubMed:9329347, ECO:0000269|PubMed:9589637}. Note=The disease is caused by mutations affecting the gene represented in this entry.	EDTA Blood Sample
[Distranstiretinemik Hipertiroksinemi], 145680, Otozomal Dominant (TTR geni) (Tüm Gen Dizi Analizi) (Postnatal)	[Dystransthyretinemic hyperthyroxinemia], 145680, Autosomal dominant (TTR gene) (Sequence Analysis-All Coding Exons) (Postnatal)	TTR	TTR, PALB	Tüm Gen Dizi Analizi' Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	DISEASE: Amyloidosis, transthyretin-related (AMYL-TTR) [MIM:105210]: A hereditary generalized amyloidosis due to transthyretin amyloid deposition. Protein fibrils can form in different tissues leading to amyloid polyneuropathies, amyloidotic cardiomyopathy, carpal tunnel syndrome, systemic senile amyloidosis. The disease includes leptomeningeal amyloidosis that is characterized by primary involvement of the central nervous system. Neuropathologic examination shows amyloid in the walls of leptomeningeal vessels, in pia arachnoid, and subpial deposits. Some patients also develop vitreous amyloid deposition that leads to visual impairment (oculeptomeningeal amyloidosis). Clinical features include seizures, stroke-like episodes, dementia, psychomotor deterioration, variable amyloid deposition in the vitreous humor. {ECO:0000269|PubMed:10036587, ECO:0000269|PubMed:10071047, ECO:0000269|PubMed:10211412, ECO:0000269|PubMed:10436378, ECO:0000269|PubMed:10439117, ECO:0000269|PubMed:10611950, ECO:0000269|PubMed:10627135, ECO:0000269|PubMed:10694917, ECO:0000269|PubMed:10842705, ECO:0000269|PubMed:10842718, ECO:0000269|PubMed:10882995, ECO:0000269|PubMed:11445644, ECO:0000269|PubMed:11866053, ECO:0000269|PubMed:12050338, ECO:0000269|PubMed:12557757, ECO:0000269|PubMed:12771253, ECO:0000269|PubMed:1301926, ECO:0000269|PubMed:1351039,	EDTA Blood Sample

Sarcosinemia is most probably a benign condition without significant clinical problems. Some reports have associated sarcosinemia with mental retardation and neurologic problems. {ECO:0000269|PubMed:10444331, ECO:0000269|PubMed:22825317}. Note=The disease is caused by mutations affecting the gene represented in this entry.;	EDTA Blood Sample
[Sedoheptulokinase Eksikliği], 617213, Otozomal Resesif (Izole Sedoheptulokinase Eksikliği) (SHPK geni) (Tüm Gen Dizi Analizi) (Postnatal)	[Sedoheptulokinase deficiency], 617213, Autosomal recessive (Isolated sedoheptulokinase deficiency) (SHPK gene) (Sequence Analysis-All Coding Exons) (Postnatal)	SHPK	SHPK, CARKL	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	.	EDTA Blood Sample
[Kısa Uyku], 612975, Otozomal Dominant (BHLHE41 geni) (Tüm Gen Dizi Analizi) (Postnatal)	[Short sleeper], 612975, Autosomal dominant (BHLHE41 gene) (Sequence Analysis-All Coding Exons) (Postnatal)	BHLHE41	BHLHE41, BHLHB3, DEC2, SHARP1	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	.	EDTA Blood Sample
[Deri / Saç / Göz Pigmentasyonu 1, Sarışın / Kahverengi Saç], 227220, Otozomal Resesif (HERC2 geni) (Tüm Gen Dizi Analizi) (Postnatal)	[Skin/hair/eye pigmentation 1, blond/brown hair], 227220, Autosomal recessive (HERC2 gene) (Sequence Analysis-All Coding Exons) (Postnatal)	HERC2	HERC2, SHEP1, MRT38	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	.	EDTA Blood Sample
[Deri / Saç / Göz Pigmentasyonu 1, Sarışın / Kahverengi Saç], 227220, Otozomal Resesif (Okulokütanöz Albinizm Tip 2) (OCA2 geni) (Tüm Gen Dizi Analizi) (Postnatal)	[Skin/hair/eye pigmentation 1, blond/brown hair], 227220, Autosomal recessive (Oculocutaneous albinism type 2) (OCA2 gene) (Sequence Analysis-All Coding Exons) (Postnatal)	OCA2	OCA2, P, PED, D15S12, BOCA, EYCL3, HCL3, SHEP1	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	.	EDTA Blood Sample
[Deri / Saç / Göz Pigmentasyonu 1, Mavi / Mavi Olmayan Gözler], 227220, Otozomal Resesif (OCA2 geni) (Tüm Gen Dizi Analizi) (Postnatal)	[Skin/hair/eye pigmentation 1, blue/nonblue eyes], 227220, Autosomal recessive (OCA2 gene) (Sequence Analysis-All Coding Exons) (Postnatal)	OCA2	OCA2, P, PED, D15S12, BOCA, EYCL3, HCL3, SHEP1	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	.	EDTA Blood Sample
[Deri / Saç / Göz Pigmentasyonu 1, Mavi / Mavi Olmayan Gözler], 227220, Otozomal Resesif (HERC2 geni) (Tüm Gen Dizi Analizi) (Postnatal)	[Skin/hair/eye pigmentation 1, blue/nonblue eyes], 227220, Autosomal recessive (HERC2 gene) (Sequence Analysis-All Coding Exons) (Postnatal)	HERC2	HERC2, SHEP1, MRT38	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	.	EDTA Blood Sample
[Deri / Saç / Göz Pigmentasyonu 10, Sarı / Kahverengi Saç], 612267 (TPCN2 geni) (Tüm Gen Dizi Analizi) (Postnatal)	[Skin/hair/eye pigmentation 10, blond/brown hair], 612267 (TPCN2 gene) (Sequence Analysis-All Coding Exons) (Postnatal)	TPCN2	TPCN2, TPC2, SHEP10	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	.	EDTA Blood Sample
[Deri / Saç / Göz Pigmentasyonu 2, Sarışın / Açık Ten], 266300, Otozomal Resesif (MC1R geni) (Tüm Gen Dizi Analizi) (Postnatal)	[Skin/hair/eye pigmentation 2, blond hair/fair skin], 266300, Autosomal recessive (MC1R gene) (Sequence Analysis-All Coding Exons) (Postnatal)	MC1R	MC1R, SHEP2, CMM5	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	.	EDTA Blood Sample
[Deri / Saç / Göz Pigmentasyonu 2, Kızıl Saç / Açık Ten], 266300, Otozomal Resesif (MC1R geni) (Tüm Gen Dizi Analizi) (Postnatal)	[Skin/hair/eye pigmentation 2, red hair/fair skin], 266300, Autosomal recessive (MC1R gene) (Sequence Analysis-All Coding Exons) (Postnatal)	MC1R	MC1R, SHEP2, CMM5	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	.	EDTA Blood Sample
[Deri / Saç / Göz Pigmentasyonu 3, Mavi / Yeşil Gözler], 601800 (Oküler Albinizm-Konjenital Sensorinöral Sağırlık) (TYR geni) (Tüm Gen Dizi Analizi) (Postnatal)	[Skin/hair/eye pigmentation 3, blue/green eyes], 601800 (Ocular albinism with congenital sensorineural deafness) (TYR gene) (Sequence Analysis-All Coding Exons) (Postnatal)	TYR	TYR, SHEP3, CMM8, OCA1A, ATN	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	.	EDTA Blood Sample
[Deri / Saç / Göz Pigmentasyonu 3, Mavi / Yeşil Gözler], 601800 (Oküler Albinizm-Konjenital Sensorinöral Sağırlık) (MLPA)	[Skin/hair/eye pigmentation 3, blue/green eyes], 601800 (Ocular albinism with congenital sensorineural deafness) (MLPA)	TYR	TYR, SHEP3, CMM8, OCA1A, ATN	MLPA (CNV)	20	60	.	.	.	.	30	Postnatal	.	EDTA Blood Sample
[Deri / Saç / Göz Pigmentasyonu 3, Açık /Koyu / Çilli Deri], 601800 (TYR geni) (Tüm Gen Dizi Analizi) (Postnatal)	[Skin/hair/eye pigmentation 3, light/dark/freckling skin], 601800 (TYR gene) (Sequence Analysis-All Coding Exons) (Postnatal)	TYR	TYR, SHEP3, CMM8, OCA1A, ATN	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	.	EDTA Blood Sample
[Deri / Saç / Göz Pigmentasyonu 3, Açık /Koyu / Çilli Deri], 601800 (MLPA)	[Skin/hair/eye pigmentation 3, light/dark/freckling skin], 601800 (MLPA)	TYR	TYR, SHEP3, CMM8, OCA1A, ATN	MLPA (CNV)	20	60	.	.	.	.	30	Postnatal	.	EDTA Blood Sample
[Deri / Saç / Göz Pigmentasyonu 4, Sarışın / Koyu Deri], 113750, Otozomal Resesif (Okulokütanöz Albinizm Tip 6) (SLC24A5 geni) (Tüm Gen Dizi Analizi) (Postnatal)	[Skin/hair/eye pigmentation 4, fair/dark skin], 113750, Autosomal recessive (Oculocutaneous albinism type 6) (SLC24A5 gene) (Sequence Analysis-All Coding Exons) (Postnatal)	SLC24A5	SLC24A5, NCKX5, SHEP4, OCA6	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	.	EDTA Blood Sample
[Deri / Saç / Göz Pigmentasyonu 5, Siyah / Siyah-Olmayan Saç], 227240, Otozomal Resesif (SLC45A2 geni) (Tüm Gen Dizi Analizi) (Postnatal)	[Skin/hair/eye pigmentation 5, black/nonblack hair], 227240, Autosomal recessive (SLC45A2 gene) (Sequence Analysis-All Coding Exons) (Postnatal)	SLC45A2	SLC45A2, MATP, AIM1, SHEP5, OCA4	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	.	EDTA Blood Sample

[Deri / Saç / Göz Pigmentasyonu 5, Koyu / Açık Ten], 227240, Otozomal Resesif (SLC45A2 gen) (Tüm Gen Dizi Analizi) (Postnatal)	[Skin/hair/eye pigmentation 5, dark/fair skin], 227240, Autosomal recessive (SLC45A2 gene) (Sequence Analysis-All Coding Exons) (Postnatal)	SLC45A2	SLC45A2, MATP, AIM1, SHEP5, OCA4	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	.	EDTA Blood Sample
[Deri / Saç / Göz Pigmentasyonu 5, Açık / Koyu Gözler], 227240, Otozomal Resesif (SLC45A2 gen) (Tüm Gen Dizi Analizi) (Postnatal)	[Skin/hair/eye pigmentation 5, dark/light eyes], 227240, Autosomal recessive (SLC45A2 gene) (Sequence Analysis-All Coding Exons) (Postnatal)	SLC45A2	SLC45A2, MATP, AIM1, SHEP5, OCA4	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	.	EDTA Blood Sample
[Deri / Saç / Göz Pigmentasyonu 6, Sarışın / Kahverengi Saç], 210750, Otozomal Resesif (SLC24A4 gen) (Tüm Gen Dizi Analizi) (Postnatal)	[Skin/hair/eye pigmentation 6, blond/brown hair], 210750, Autosomal recessive (SLC24A4 gene) (Sequence Analysis-All Coding Exons) (Postnatal)	SLC24A4	SLC24A4, NCKX4, SHEP6, AI2A5	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	.	EDTA Blood Sample
[Deri / Saç / Göz Pigmentasyonu 6, Mavi / Yeşil Gözler], 210750, Otozomal Resesif (SLC24A4 gen) (Tüm Gen Dizi Analizi) (Postnatal)	[Skin/hair/eye pigmentation 6, blue/green eyes], 210750, Autosomal recessive (SLC24A4 gene) (Sequence Analysis-All Coding Exons) (Postnatal)	SLC24A4	SLC24A4, NCKX4, SHEP6, AI2A5	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	.	EDTA Blood Sample
[Deri / Saç / Göz Pigmentasyonu 7, Sarı / Kahverengi Saç], 611664 (Ailesel Progresif Hiper ve Hipopigmentasyon) (KITLG gen) (Tüm Gen Dizi Analizi) (Postnatal)	[Skin/hair/eye pigmentation 7, blond/brown hair], 611664 (Familial progressive hyper- and hypopigmentation) (KITLG gene) (Sequence Analysis-All Coding Exons) (Postnatal)	KITLG	KITLG, MGF, SF, SCF, SHEP7, FPHH, DCUA, DFNA69	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	.	EDTA Blood Sample
[Deri / Saç / Göz Pigmentasyonu 9, Kahverengi / Kahverengi Olmayan Gözler], 611742 (ASIP gen) (Tüm Gen Dizi Analizi) (Postnatal)	[Skin/hair/eye pigmentation 9, brown/nonbrown eyes], 611742 (ASIP gene) (Sequence Analysis-All Coding Exons) (Postnatal)	ASIP	ASIP, AGTIL, SHEP9	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	.	EDTA Blood Sample
[Deri / Saç / Göz Pigmentasyonu 9, Koyu / Açık Saç], 611742 (ASIP gen) (Tüm Gen Dizi Analizi) (Postnatal)	[Skin/hair/eye pigmentation 9, dark/light hair], 611742 (ASIP gene) (Sequence Analysis-All Coding Exons) (Postnatal)	ASIP	ASIP, AGTIL, SHEP9	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	.	EDTA Blood Sample
[Deri / Saç / Göz Pigmentasyonu, Varyasyon, 11 (Melanezyen Sarışın Saç)], 612271 (TYRP1 gen) (Tüm Gen Dizi Analizi) (Postnatal)	[Skin/hair/eye pigmentation, variation in, 11 (Melanesian blond hair)], 612271 (TYRP1 gene) (Sequence Analysis-All Coding Exons) (Postnatal)	TYRP1	TYRP1, CAS2, GP75, SHEP11	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	.	EDTA Blood Sample
[Deri / Saç / Göz Pigmentasyonu, Varyasyon, 8], 611724 (IRF4 gen) (Tüm Gen Dizi Analizi) (Postnatal)	[Skin/hair/eye pigmentation, variation in, 8], 611724 (IRF4 gene) (Sequence Analysis-All Coding Exons) (Postnatal)	IRF4	IRF4, LSIRF, SHEP8	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	.	EDTA Blood Sample
[Sprint Performansı] (ACTN3 gen) (Tüm Gen Dizi Analizi) (Postnatal)	[Sprinting performance] (ACTN3 gene) (Sequence Analysis-All Coding Exons) (Postnatal)	ACTN3	ACTN3	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	.	EDTA Blood Sample
[Statinler, Zayıf Kolesterol Düşürücü Etki (HMGCR gen) (Tüm Gen Dizi Analizi) (Postnatal)	[Statins, attenuated cholesterol lowering by] (HMGCR gene) (Sequence Analysis-All Coding Exons) (Postnatal)	HMGCR	HMGCR, LDLCQ3	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	.	EDTA Blood Sample
[Süperoksit Dismutaz, Yüksek Hücre Dışı] (SOD3 gen) (Tüm Gen Dizi Analizi) (Postnatal)	[Superoxide dismutase, elevated extracellular] (SOD3 gene) (Sequence Analysis-All Coding Exons) (Postnatal)	SOD3	SOD3	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	.	EDTA Blood Sample
[Troksin Bağlayıcı Globulin QTL], 300932 (SERPINA7 gen) (Tüm Gen Dizi Analizi) (Postnatal)	[Thyroxine-binding globulin QTL], 300932 (SERPINA7 gene) (Sequence Analysis-All Coding Exons) (Postnatal)	SERPINA7	TBG, TBGQTL	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	DISEASE: Thyroxine-binding globulin deficiency (TBG deficiency) [MIM:314200]: Mutations in the SERPINA7 gene can result as a whole spectrum of deficiencies, characterized by either reduced or increased TBG levels in the serum. Patients show, respectively, reduced or elevated protein-bound iodine but are euthyroid. (ECO:0000269|PubMed:1294376, ECO:0000269|PubMed:1515456, ECO:0000269|PubMed:1901689, ECO:0000269|PubMed:1906047, ECO:0000269|PubMed:2155256, ECO:0000269|PubMed:2501669). Patients manifest rapid and early degeneration of their gonads, which are present in the adult as 'streak gonads', consisting mainly of fibrous tissue and variable amounts of ovarian stroma. As a result these patients do not develop secondary sexual characteristics at puberty. The external genitalia in these subjects are completely female, and Mullerian structures are normal. {ECO:0000269|PubMed:10670762, ECO:0000269|PubMed:10721678, ECO:0000269|PubMed:10843173, ECO:0000269|PubMed:10852465, ECO:0000269|PubMed:12107262, ECO:0000269|PubMed:12793612, ECO:0000269|PubMed:1339396, ECO:0000269|PubMed:1415266, ECO:0000269|PubMed:1483689, ECO:0000269|PubMed:1570825, ECO:0000269|PubMed:17063144, ECO:0000269|PubMed:2247149, ECO:0000269|PubMed:7717397, ECO:0000269|PubMed:7776083, ECO:0000269|PubMed:7985018, ECO:0000269|PubMed:8019555, ECO:0000269|PubMed:8105086, ECO:0000269|PubMed:8353496, ECO:0000269|PubMed:8447323, ECO:0000269|PubMed:9450909, ECO:0000269|PubMed:9521592, ECO:0000269|PubMed:9678356, ECO:0000269|Ref.41, ECO:0000269|Ref.47}. Note=The disease is caused by mutations affecting the gene represented in this entry. XY individuals with a duplication of part of the short arm of the X chromosome and an intact SRY gene develop as females. The single X chromosome in these individuals does not undergo X-chromosome inactivation; therefore, these individuals presumably carry 2 active copies of genes, including the NR0B1 gene, in the duplicated region. Individuals with deletion of this region develop as males. Genes within the dosage-sensitive sex reversal region are, therefore, not essential for testis development, but, when present in a double dose, interfere with testis formation..	EDTA Blood Sample

Radiologic features include delayed bone age, cone-shaped epiphyses, shortened long tubular bones, and ovoid vertebral bodies. Affected individuals have distinct facial features, including round face, well-defined eyebrows, long eyelashes, bulbous nose with anteverted nostrils, long and prominent philtrum, and thick lips with a small mouth. Other characteristic features include hoarse voice and pseudomuscular build, and there are distinct skeletal features as well, including an internal notch of the femoral head, internal notch of the second metacarpal, and external notch of the fifth metacarpal. Adenozin Deaminaz Eksikliği, Parsiyel, 102700, Otozomal Resesif, Somatik Mozaik (Ağır Kombine İmmun Yetmezlik, Adenozin Deaminaz Eksikliğine Bağlı) (ADA geni) (Tüm Gen Dizi Analizi) (Postnatal)	Adenosine deaminase deficiency, partial, 102700, Autosomal recessive, Somatic mosaicism (Severe combined immunodeficiency due to adenosine deaminase deficiency) (ADA gene) (Sequence Analysis-All Coding Exons) (Postnatal)	ADA	ADA	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	DISEASE: Severe combined immunodeficiency autosomal recessive T-cell-negative/B-cell-negative/NK-cell-negative due to adenosine deaminase deficiency (ADASCID) [MIM:102700]: An autosomal recessive disorder accounting for about 50% of non-X-linked SCIDs. SCID refers to a genetically and clinically heterogeneous group of rare congenital disorders characterized by impairment of both humoral and cell-mediated immunity, leukopenia, and low or absent antibody levels. Patients with SCID present in infancy with recurrent, persistent infections by opportunistic organisms. The common characteristic of all types of SCID is absence of T-cell- mediated cellular immunity due to a defect in T-cell development. ADA deficiency has been diagnosed in chronically ill teenagers and adults (late or adult onset). Population and newborn screening programs have also identified several healthy individuals with normal immunity who have partial ADA deficiency. {ECO:0000269|PubMed:10200056, ECO:0000269|PubMed:1284479, ECO:0000269|PubMed:2166947, ECO:0000269|PubMed:2783588, ECO:0000269|PubMed:3182793, ECO:0000269|PubMed:3839802, ECO:0000269|PubMed:6208479, ECO:0000269|PubMed:7599635, ECO:0000269|PubMed:8227344, ECO:0000269|PubMed:8299233}. Visual anomalies include decreased acuity and nystagmus. The phenotype is highly variable. The hair of affected individuals may turn darker with age, and pigmented nevi or freckles may be seen. African and African American individuals may have yellow hair and blue-gray or hazel irides. One phenotypic variant, 'brown OCA,' has been described in African and African American populations and is characterized by light brown hair and skin color and gray to tan irides. {ECO:0000269|PubMed:10649493, ECO:0000269|PubMed:10671067, ECO:0000269|PubMed:10987646, ECO:0000269|PubMed:12713581, ECO:0000269|PubMed:12727022, ECO:0000269|PubMed:12876664, ECO:0000269|PubMed:17385796, ECO:0000269|PubMed:23504663, ECO:0000269|PubMed:7762554, ECO:0000269|PubMed:7874125, ECO:0000269|PubMed:9259203}. Alveoler Kapiller Displazi - Pulmoner Venlerin Hizalama Bozukluğu, 1, 265380, Otozomal Dominant; ACDMPV (Konjenital Alveoler Kılcal Displazi) (FOXF1 geni) (Tüm Gen Dizi Analizi) (Postnatal)	Alveolar capillary dysplasia with misalignment of pulmonary veins, 265380, Autosomal dominant; ACDMPV (Congenital alveolar capillary dysplasia) (FOXF1 gene) (Sequence Analysis-All Coding Exons) (Postnatal)	FOXF1	FOXF1, FKHL5, ACDMPV	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	DISEASE: Alveolar capillary dysplasia with misalignment of pulmonary veins (ACDMPV) [MIM:265380]: A rare developmental disorder characterized by abnormal development of the capillary vascular system in the lungs. Histological features include failure of formation and ingrowth of alveolar capillaries, medial muscular thickening of small pulmonary arterioles with muscularization of the intraacinar arterioles, thickened alveolar walls, and anomalously situated pulmonary veins running alongside pulmonary arterioles and sharing the same adventitial sheath. Less common features include a reduced number of alveoli and a patchy distribution of the histopathologic changes. Affected infants present with respiratory distress and the disease is fatal within the newborn period. Additional features include multiple congenital anomalies affecting the cardiovascular, gastrointestinal, genitourinary, and musculoskeletal systems, as well as disruption of the normal right-left asymmetry of intrathoracic or intraabdominal organs. ACDMPV is a rare cause of persistent pulmonary hypertension of the newborn, an abnormal physiologic state caused by failure of transition of the pulmonary circulation from the high pulmonary vascular resistance of the fetus to the low pulmonary vascular resistance of the newborn. {ECO:0000269|PubMed:19500772, ECO:0000269|PubMed:23505205}. Alzheimer Hastalığı 1, Ailesel, 104300, Otozomal Dominant (Erken Başlangıçlı) Otozomal Dominant Alzheimer Hastalığı (APP geni) (Tüm Gen Dizi Analizi) (Postnatal)	Alzheimer disease 1, familial, 104300, Autosomal dominant (Early-onset autosomal dominant Alzheimer disease) (APP gene) (Sequence Analysis-All Coding Exons) (Postnatal)	APP	APP, AAA, CVAP, AD1	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	DISEASE: Alzheimer disease 1 (AD1) [MIM:104300]: A familial early- onset form of Alzheimer disease. It can be associated with cerebral amyloid angiopathy. Alzheimer disease is a neurodegenerative disorder characterized by progressive dementia, loss of cognitive abilities, and deposition of fibrillar amyloid proteins as intraneuronal neurofibrillary tangles, extracellular amyloid plaques and vascular amyloid deposits. The major constituent of these plaques is the neurotoxic amyloid-beta-APP 40-42 peptide (s), derived proteolytically from the transmembrane precursor protein APP by sequential secretase processing. The cytotoxic C-terminal fragments (CTFs) and the caspase-cleaved products such as C31 derived from APP, are also implicated in neuronal death. (ECO:0000269|PubMed:10097173, ECO:0000269|PubMed:10631141, ECO:0000269|PubMed:10665499, ECO:0000269|PubMed:10867787, ECO:0000269|PubMed:11063718, ECO:0000269|PubMed:11528419, ECO:0000269|PubMed:12034808, ECO:0000269|PubMed:1302033, ECO:0000269|PubMed:1303239, ECO:0000269|PubMed:1303275, ECO:0000269|PubMed:1415269, ECO:0000269|PubMed:15201367, ECO:0000269|PubMed:15365148, ECO:0000269|PubMed:15668448, ECO:0000269|PubMed:1671712, ECO:0000269|PubMed:1678058, ECO:0000269|PubMed:1908231, ECO:0000269|PubMed:1925564, ECO:0000269|PubMed:1944558,	EDTA Blood Sample
Alzheimer Hastalığı 18, Yatkınlık, 615590 (Retiküle Akropigmentasyon, Kitamura Tipi) (ADAM10 geni) (Tüm Gen Dizi Analizi) (Postnatal)	Alzheimer disease 18, susceptibility to, 615590 (Reticulate acropigmentation of Kitamura) (ADAM10 gene) (Sequence Analysis-All Coding Exons) (Postnatal)	ADAM10	ADAM10, MADM, RAK, AD18	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	. Alzheimer Hastalığı -2, 104310, Otozomal Dominant; AD2 (Early-Onset Autosomal Dominant Alzheimer Disease) (APOE geni) (Tüm Gen Dizi Analizi) (Postnatal)	Alzheimer disease-2, 104310, Autosomal dominant; AD2 (Early-onset autosomal dominant Alzheimer disease) (APOE gene) (Sequence Analysis-All Coding Exons) (Postnatal)	APOE	APOE, AD2, LPG, LDLCQ5	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	DISEASE: Alzheimer disease 2 (AD2) [MIM:104310]: A late-onset neurodegenerative disorder characterized by progressive dementia, loss of cognitive abilities, and deposition of fibrillar amyloid proteins as intraneuronal neurofibrillary tangles, extracellular amyloid plaques and vascular amyloid deposits. The major constituent of these plaques is the neurotoxic amyloid-beta-APP 40-42 peptide (s), derived proteolytically from the transmembrane precursor protein APP by sequential secretase processing. The cytotoxic C-terminal fragments (CTFs) and the caspase-cleaved products such as C31 derived from APP, are also implicated in neuronal death. Note=Disease susceptibility is associated with variations affecting the gene represented in this entry. The APOE*4 allele is genetically associated with the common late onset familial and sporadic forms of Alzheimer disease. Risk for AD increased from 20% to 90% and mean age at onset decreased from 84 to 68 years with increasing number of APOE*4 alleles in 42 families with late onset AD. Thus APOE*4 gene dose is a major risk factor for late onset AD and, in these families, homozygosity for APOE*4 was virtually sufficient to cause AD by age 80. The mechanism by which APOE*4 participates in pathogenesis is not known.	EDTA Blood Sample
Alzheimer Hastalığı-4,606889, Otozomal Dominant (Erken Başlangıçlı Otozomal Dominant Alzheimer Hastalığı) (PSEN2 geni) (Tüm Gen Dizi Analizi) (Postnatal)	Alzheimer disease-4, 606889, Autosomal dominant (Early-onset autosomal dominant Alzheimer disease) (PSEN2 gene) (Sequence Analysis-All Coding Exons) (Postnatal)	PSEN2	PSEN2, AD4, STM2, CMD1V	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	DISEASE: Alzheimer disease 4 (AD4) [MIM:606889]: A familial early- onset form of Alzheimer disease. Alzheimer disease is a neurodegenerative disorder characterized by progressive dementia, loss of cognitive abilities, and deposition of fibrillar amyloid proteins as intraneuronal neurofibrillary tangles, extracellular amyloid plaques and vascular amyloid deposits. The major constituent of these plaques is the neurotoxic amyloid-beta-APP 40-42 peptide (s), derived proteolytically from the transmembrane precursor protein APP by sequential secretase processing. The cytotoxic C-terminal fragments (CTFs) and the caspase-cleaved products such as C31 derived from APP, are also implicated in neuronal death. It is typically characterized by cranial neuropathy and lattice corneal dystrophy. Most patients have modest involvement of internal organs, but severe systemic disease can develop in some individuals causing peripheral polyneuropathy, amyloid cardiomyopathy, and nephrotic syndrome leading to renal failure. {ECO:0000269|PubMed:1338910, ECO:0000269|PubMed:2176481}. Note=The disease is caused by mutations affecting the gene represented in this entry.;	EDTA Blood Sample

Amiloidoz, Herediter, Transtiretin İle İlişkili, 105210, Otozomal Dominant (ATTRV30M Amiloidoz) (TTR geni) (Tüm Gen Dizi Analizi) (Postnatal)	Amyloidosis, hereditary, transthyretin-related, 105210, Autosomal dominant (ATTRv30M amyloidosis) (TTR gene) (Sequence Analysis-All Coding Exons) (Postnatal)	TTR	TTR, PALB	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	DISEASE: Amyloidosis, transthyretin-related (AMYL-TTR) [MIM:105210]: A hereditary generalized amyloidosis due to transthyretin amyloid deposition. Protein fibrils can form in different tissues leading to amyloid polyneuropathies, amyloidotic cardiomyopathy, carpal tunnel syndrome, systemic senile amyloidosis. The disease includes leptomeningeal amyloidosis that is characterized by primary involvement of the central nervous system. Neuropathologic examination shows amyloid in the walls of leptomeningeal vessels, in pia arachnoid, and subpial deposits. Some patients also develop vitreous amyloid deposition that leads to visual impairment (oculoleptomeningeal amyloidosis). Clinical features include seizures, stroke-like episodes, dementia, psychomotor deterioration, variable amyloid deposition in the vitreous humor. {ECO:0000269|PubMed:10036587, ECO:0000269|PubMed:10071047, ECO:0000269|PubMed:10211412, ECO:0000269|PubMed:10436378, ECO:0000269|PubMed:10439117, ECO:0000269|PubMed:10611950, ECO:0000269|PubMed:10627135, ECO:0000269|PubMed:10694917, ECO:0000269|PubMed:10842705, ECO:0000269|PubMed:10842718, ECO:0000269|PubMed:10882995, ECO:0000269|PubMed:11445644, ECO:0000269|PubMed:11866053, ECO:0000269|PubMed:12050338, ECO:0000269|PubMed:12557757, ECO:0000269|PubMed:12771253, ECO:0000269|PubMed:1301926, ECO:0000269|PubMed:1351039,	EDTA Blood Sample
Amiloidoz, Primer Lokalize Kutanöz, 1, 105250, Otozomal Dominant; PLCA1 (Alesel Primer Lokalize Kutanöz Amiloidoz) (OSMR geni) (Tüm Gen Dizi Analizi) (Postnatal)	Amyloidosis, primary localized cutaneous, 1, 105250, Autosomal dominant; PLCA1 (Familial primary localized cutaneous amyloidosis) (OSMR gene) (Sequence Analysis-All Coding Exons) (Postnatal)	OSMR	OSMR, OSMRB, PLCA1	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	DISEASE: Amyloidosis, primary localized cutaneous, 1 (PLCA1) [MIM:105250]: A primary amyloidosis characterized by localized cutaneous amyloid deposition. This condition usually presents with itching (especially on the lower legs) and visible changes of skin hyperpigmentation and thickening that may be exacerbated by chronic scratching and rubbing. Primary localized cutaneous amyloidosis is often divided into macular and lichen subtypes although many affected individuals often show both variants coexisting. Lichen amyloidosis characteristically presents as a pruritic eruption of grouped hyperkeratotic papules with a predilection for the shins, calves, ankles and dorsa of feet and thighs. Papules may coalesce to form hyperkeratotic plaques that can resemble lichen planus, lichen simplex or nodular prurigo. Macular amyloidosis is characterized by small pigmented macules that may merge to produce macular hyperpigmentation, sometimes with a reticulate or rippled pattern. In macular and lichen amyloidosis, amyloid is deposited in the papillary dermis in association with grouped colloid bodies, thought to represent degenerate basal keratinocytes. The amyloid deposits probably reflect a combination of degenerate keratin filaments, serum amyloid P component, and deposition of immunoglobulins. {ECO:0000269|PubMed:18179886, ECO:0000269|PubMed:19690585}. Note=The disease is caused by mutations affecting the gene represented in this entry.;	EDTA Blood Sample

Amyotrofik Lateral Skleroz, Yatkınlık, 13, 183090, Otozomal Dominant (Spinoserebellar Ataksi Tip 2) (ATXN2 geni) (Tüm Gen Dizi Analizi) (Postnatal)	Amyotrophic lateral sclerosis, susceptibility to, 13, 183090, Autosomal dominant (Spinocerebellar ataxia type 2) (ATXN2 gene) (Sequence Analysis-All Coding Exons) (Postnatal)	ATXN2	ATXN2, ATX2, SCA2, ASL13	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	DISEASE: Spinocerebellar ataxia 2 (SCA2) [MIM:183090]: Spinocerebellar ataxia is a clinically and genetically heterogeneous group of cerebellar disorders. Patients show progressive incoordination of gait and often poor coordination of hands, speech and eye movements, due to cerebellum degeneration with variable involvement of the brainstem and spinal cord. SCA2 belongs to the autosomal dominant cerebellar ataxias type I (ADCA I) which are characterized by cerebellar ataxia in combination with additional clinical features like optic atrophy, ophthalmoplegia, bulbar and extrapyramidal signs, peripheral neuropathy and dementia. SCA2 is characterized by hyporeflexia, myoclonus and action tremor and dopamine-responsive parkinsonism. In some patients, SCA2 presents as pure familial parkinsonism without cerebellar signs. {ECO:0000269|PubMed:8896555, ECO:0000269|PubMed:8896556, ECO:0000269|PubMed:8899537}. Note=The disease is caused by mutations affecting the gene represented in this entry. SCA2 is caused by expansion of a CAG repeat resulting in about 36 to 52 repeats in some patients. Longer expansions result in earlier the expansion, onset of the disease.	EDTA Blood Sample

Aort Anevrizması, Ailesel Torakal 9, 616166, Otozomal Dominant; AAT9 (Ailesel Torakal Aort Anevrizması ve Aort Diseksiyonu) (MFAP5 geni) (Tüm Gen Dizi Analizi) (Postnatal)	Aortic aneurysm, familial thoracic 9, 616166, Autosomal dominant; AAT9 (Familial thoracic aortic aneurysm and aortic dissection) (MFAP5 gene) (Sequence Analysis-All Coding Exons) (Postnatal)	MFAP5	MFAP5, MAGP2, AAT9	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	DISEASE: Aortic aneurysm, familial thoracic 9 (AAT9) [MIM:616166]: A disease characterized by permanent dilation of the thoracic aorta usually due to degenerative changes in the aortic wall. It is primarily associated with a characteristic histologic appearance known as 'medial necrosis' or 'Erdheim cystic medial necrosis' in which there is degeneration and fragmentation of elastic fibers, loss of smooth muscle cells, and an accumulation of basophilic ground substance. {ECO:0000269	PubMed:25434006}. Note=The disease is caused by mutations affecting the gene represented in this entry..	EDTA Blood Sample
Aort Kapak Hastalığı 1, 109730, Otozomal Dominant; AOVD1 (Ailesel Bikispit Aort Kapağı) (NOTCH1 geni) (Tüm Gen Dizi Analizi) (Postnatal)	Aortic valve disease 1, 109730, Autosomal dominant; AOVD1 (Familial bicuspid aortic valve) (NOTCH1 gene) (Sequence Analysis-All Coding Exons) (Postnatal)	NOTCH1	NOTCH1, TAN1, AOSS, AOVD1	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	DISEASE: Aortic valve disease 1 (AOVD1) [MIM:109730]: A common defect in the aortic valve in which two rather than three leaflets are present. It is often associated with aortic valve calcification, stenosis and insufficiency. In extreme cases, the blood flow may be so restricted that the left ventricle fails to grow, resulting in hypoplastic left heart syndrome. {ECO:0000269	PubMed:16025100}. Note=The disease is caused by mutations affecting the gene represented in this entry.	EDTA Blood Sample
Aort Kapak Hastalığı 2, 614823, Otozomal Dominant; AOVD2 (Ailesel Bikispit Aort Kapağı) (SMAD6 geni) (Tüm Gen Dizi Analizi) (Postnatal)	Aortic valve disease 2, 614823, Autosomal dominant; AOVD2 (Familial bicuspid aortic valve) (SMAD6 gene) (Sequence Analysis-All Coding Exons) (Postnatal)	SMAD6	SMAD6, MADH6, AOVD2	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	DISEASE: Aortic valve disease 2 (AOVD2) [MIM:614823]: A common defect in the aortic valve in which two rather than three leaflets are present. It is often associated with aortic valve calcification, stenosis and insufficiency. In extreme cases, the blood flow may be so restricted that the left ventricle fails to grow, resulting in hypoplastic left heart syndrome. {ECO:0000269|PubMed:22275001}. Note=The disease is caused by mutations affecting the gene represented in this entry. SMAD6 variants may contribute to increased risk of congenital cardiovascular malformations (CVM). CVM is a major cause of mortality and morbidity in childhood. In most sporadic cases that cannot be attributed to particular malformation syndromes or teratogenic exposures, there remains a substantial excess familial risk, indicating a significant genetic contribution to disease susceptibility (PubMed:22275001). {ECO:0000269|PubMed:22275001};.	EDTA Blood Sample
Apert Sendromu, 101200, Otozomal Dominant (Apert Sendromu) (FGFR2 geni) (Tüm Gen Dizi Analizi) (Postnatal)	Apert syndrome, 101200, Autosomal dominant (Apert syndrome) (FGFR2 gene) (Sequence Analysis-All Coding Exons) (Postnatal)	FGFR2	FGFR2, BEK, CFD1, JWS, TK14, BBDS	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	DISEASE: Apert syndrome (APRS) [MIM:101200]: A syndrome characterized by facio-cranio-synostosis, osseous and membranous syndactyly of the four extremities, and midface hypoplasia. The craniosynostosis is bicoronal and results in acrocephaly or brachysphenocephalic type. Syndactyly of the fingers and toes may be total (mitten hands and sock feet) or partial affecting the second, third, and fourth digits. Intellectual deficit is frequent and often severe, usually being associated with cerebral malformations. {ECO:0000269|PubMed:11781877, ECO:0000269|PubMed:7668257, ECO:0000269|PubMed:7719344, ECO:0000269|PubMed:9002682, ECO:0000269|PubMed:9452027, ECO:0000269|PubMed:9677057}. Ataksi, Posterior Kolon, Retinitis Pigmentoza, 609033, Otozomal Resesif; AXPC1 (Arka Kolon Ataksi-Retinitis Pigmentoza Sendromu) (FLVCR1 gen) (Tüm Gen Dizi Analizi) (Postnatal)	Ataxia, posterior column, with retinitis pigmentosa, 609033, Autosomal recessive; AXPC1 (Posterior column ataxia-retinitis pigmentosa syndrome) (FLVCR1 gene) (Sequence Analysis-All Coding Exons) (Postnatal)	FLVCR1	FLVCR1, AXPC1, PCARP	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	DISEASE: Posterior column ataxia with retinitis pigmentosa (PCARP) [MIM:609033]: A neurodegenerative syndrome beginning in infancy with areflexia and retinitis pigmentosa. Nyctalopia (night blindness) and peripheral visual field loss are usually evident during late childhood or teenage years, with subsequent progressive constriction of the visual fields and loss of central retinal function over time. A sensory ataxia caused by degeneration of the posterior columns of the spinal cord results in a loss of proprioceptive sensation that is clinically evident in the second decade of life and gradually progresses. Scoliosis, camptodactyly, achalasia, gastrointestinal dysmotility, and a sensory peripheral neuropathy are variable features of the disease. Affected individuals have no clinical or radiological evidence of cerebral or cerebellar involvement. {ECO:0000269|PubMed:21070897, ECO:0000269|PubMed:21267618}. Note=The disease is caused by mutations affecting the gene represented in this entry. Defective neuronal heme transmembrane export due to FLVCR1 mutations may abrogate the neuroprotective effects of neuroglobin and initiate an apoptotic cascade that results in the selective degeneration of photoreceptors in the neurosensory retina and sensory neurons in the posterior spinal cord.;	EDTA Blood Sample
Ataksi, Duyusal, 1, Otozomal Dominant, 608984, Otozomal Dominant (RNF170 geni) (Tüm Gen Dizi Analizi) (Postnatal)	Ataxia, sensory, 1, autosomal dominant, 608984, Autosomal dominant (RNF170 gene) (Sequence Analysis-All Coding Exons) (Postnatal)	RNF170	RNF170, SNAX1	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	. Note=The disease is caused by mutations affecting the gene represented in this entry.,	EDTA Blood Sample
Atriyal Septal Defekt 7, ± AV İletim Defekti, 108900, Otozomal Dominant; ASD7 (Atriyal Septal Defekt-Atriyoventriküler İletim Defekti Sendromu) (NKX2-5 geni) (Tüm Gen Dizi Analizi) (Postnatal)	Atrial septal defect 7, with or without AV conduction defects, 108900, Autosomal dominant; ASD7 (Atrial septal defect-atrioventricular conduction defects syndrome) (NKX2-5 gene) (Sequence Analysis-All Coding Exons) (Postnatal)	NKX2-5	NKX2-5, NKX2E, CSX, CHNG5, VSD3, HLHS2	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	.	EDTA Blood Sample
Atriyal Septal Defekt 8, 614433, Otozomal Dominant; ASD8 (İnteratriyal Kominikasyon) (CITED2 geni) (Tüm Gen Dizi Analizi) (Postnatal)	Atrial septal defect 8, 614433, Autosomal dominant; ASD8 (Interatrial communication) (CITED2 gene) (Sequence Analysis-All Coding Exons) (Postnatal)	CITED2	CITED2, MRG1, P35SRJ, VSD2, ASD8	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	.	EDTA Blood Sample
Atriyal Septal Defekt 9, 614475, Otozomal Dominant (İnteratriyal Kominikasyon) (GATA6 geni) (Tüm Gen Dizi Analizi) (Postnatal)	Atrial septal defect 9, 614475, Autosomal dominant (Interatrial communication) (GATA6 gene) (Sequence Analysis-All Coding Exons) (Postnatal)	GATA6	GATA6, AVSD5, ASD9, AVSD5, PACHD	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	.	EDTA Blood Sample
Atriyal Septal Defekt 9, Aut9 (İnteratriyal Kominikasyon) (GATA6 geni) (Tüm Gen Dizi Analizi) (Postnatal)	ATRIAL SEPTAL DEFECT 9; ASD9 (Interatrial communication) (GATA6 gene) (Sequence Analysis-All Coding Exons) (Postnatal)	GATA6	GATA6, AVSD5, ASD9, AVSD5, PACHD	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	.	EDTA Blood Sample
Atriyal Standstill 2, 615745, Otozomal Resesif; ATRST2 (Atriyal Durma) (NPPA geni) (Tüm Gen Dizi Analizi) (Postnatal)	Atrial standstill 2, 615745, Autosomal recessive; ATRST2 (Atrial standstill) (NPPA gene) (Sequence Analysis-All Coding Exons) (Postnatal)	NPPA	NPPA, PND, ANP, ATFB6, ATRST2	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	.	EDTA Blood Sample
Atriyal Standstill, Dijenik (GJA5 / SCN5A), 108770, Otozomal Dominant; ATRST1 (Atriyal Duraklaması) (GJA5 geni) (Tüm Gen Dizi Analizi) (Postnatal)	Atrial standstill, digenic (GJA5/SCN5A), 108770, Autosomal dominant; ATRST1 (Atrial standstill) (GJA5 gene) (Sequence Analysis-All Coding Exons) (Postnatal)	GJA5	GJA5, CX40, ATFB11	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	DISEASE: Atrial standstill 1 (ATRST1) [MIM:108770]: A rare arrhythmia characterized by the absence of electrical and mechanical activity in the atria. Electrocardiographically, it is characterized by bradycardia, the absence of P waves, and a junctional narrow complex escape rhythm. {ECO:0000269	PubMed:16790700}. Note=The disease may be caused by mutations affecting distinct genetic loci, including the gene represented in this entry. A rare GJA5 genotype has been detected in combination with a mutation in SCN5A in a large family with atrial standstill.	EDTA Blood Sample
Papüler Lezyonlar-Atrişi, 209500, Otozomal Resesif; APL (Atrişi-Papüler Lezyonlar) (HR geni) (Tüm Gen Dizi Analizi) (Postnatal)	Atrichia with papular lesions, 209500, Autosomal recessive; APL (Atrichia with papular lesions) (HR gene) (Sequence Analysis-All Coding Exons) (Postnatal)	HR	HR, AU, MUHH1, HYPT4	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	.	EDTA Blood Sample
Atriyoventriküler Septal Defekt 3, 600309, Otozomal Dominant (Atriyoventriküler Kanal Defekti) (GJA1 geni) (Tüm Gen Dizi Analizi) (Postnatal)	Atrioventricular septal defect 3, 600309, Autosomal dominant (Atrioventricular canal defect) (GJA1 gene) (Sequence Analysis-All Coding Exons) (Postnatal)	GJA1	GJA1, CX43, ODDD, SDTY3, ODOD, HSS, AVSD3, HLHS1, CMDR, EKVP	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	.	EDTA Blood Sample
Atriyoventriküler Septal Defekt 3; Avsd3 (Atriyoventriküler Kanal Defekti) (GJA1 geni) (Tüm Gen Dizi Analizi) (Postnatal)	ATRIOVENTRICULAR SEPTAL DEFECT 3; AVSD3 (Atrioventricular canal defect) (GJA1 gene) (Sequence Analysis-All Coding Exons) (Postnatal)	GJA1	GJA1, CX43, ODDD, SDTY3, ODOD, HSS, AVSD3, HLHS1, CMDR, EKVP	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	.	EDTA Blood Sample
Atriyoventriküler Septal Defekt 4, 614430, Otozomal Dominant; AVSD4 (Atriyoventriküler Kanal Defekti) (GATA4 geni) (Tüm Gen Dizi Analizi) (Postnatal)	Atrioventricular septal defect 4, 614430, Autosomal dominant; AVSD4 (Atrioventricular canal defect) (GATA4 gene) (Sequence Analysis-All Coding Exons) (Postnatal)	GATA4	GATA4, ASD2, VSD1, TACHD, TOF	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	.	EDTA Blood Sample
Atriyoventriküler Septal Defekt 4, 614430, Otozomal Dominant; AVSD4 (Atriyoventriküler Kanal Defekti) (MLPA)	Atrioventricular septal defect 4, 614430, Autosomal dominant; AVSD4 (Atrioventricular canal defect) (MLPA)	GATA4	GATA4, ASD2, VSD1, TACHD, TOF	MLPA (CNV)	EDTA'lı Kan (2-4 ml)		20	60	.	.	30	Postnatal	.	EDTA Blood Sample
Atriyoventriküler Septal Defekt 5, 614474, Otozomal Dominant (Atriyoventriküler Kanal Defekti) (GATA6 geni) (Tüm Gen Dizi Analizi) (Postnatal)	Atrioventricular septal defect 5, 614474, Autosomal dominant (Atrioventricular canal defect) (GATA6 gene) (Sequence Analysis-All Coding Exons) (Postnatal)	GATA6	GATA6, AVSD5, ASD9, AVSD5, PACHD	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	.	EDTA Blood Sample
Atriyoventriküler Septal Defekt 5; Avsd5 (Atriyoventriküler Kanal Defekti) (GATA6 geni) (Tüm Gen Dizi Analizi) (Postnatal)	ATRIOVENTRICULAR SEPTAL DEFECT 5; AVSD5 (Atrioventricular canal defect) (GATA6 gene) (Sequence Analysis-All Coding Exons) (Postnatal)	GATA6	GATA6, AVSD5, ASD9, AVSD5, PACHD	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	.	EDTA Blood Sample
Atriyoventriküler Septal Defekt, Parsiyel, Heterotaksi Sendromu, 606217, Otozomal Dominant; AVSD2 (Atriyoventriküler Kanal Defekti) (CRELD1 geni) (Tüm Gen Dizi Analizi) (Postnatal)	Atrioventricular septal defect, partial, with heterotaxy syndrome, 606217, Autosomal dominant; AVSD2 (Atrioventricular canal defect) (CRELD1 gene) (Sequence Analysis-All Coding Exons) (Postnatal)	CRELD1	CRELD1, AVSD2	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	.	EDTA Blood Sample
Atriyoventriküler Septal Defekt, Yatkınlık, 2, 606217, Otozomal Dominant; AVSD2 (Atriyoventriküler Kanal Defekti) (CRELD1 geni) (Tüm Gen Dizi Analizi) (Postnatal)	Atrioventricular septal defect, susceptibility to, 2, 606217, Autosomal dominant; AVSD2 (Atrioventricular canal defect) (CRELD1 gene) (Sequence Analysis-All Coding Exons) (Postnatal)	CRELD1	CRELD1, AVSD2	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	DISEASE: Atrioventricular septal defect 2 (AVSD2) [MIM:606217]: A congenital heart malformation characterized by a common atrioventricular junction coexisting with deficient atrioventricular septation. The complete form involves underdevelopment of the lower part of the atrial septum and the upper part of the ventricular septum; the valve itself is also shared. A less severe form, known as ostium primum atrial septal defect, is characterized by separate atrioventricular valvar orifices despite a common junction. {ECO:0000269	PubMed:12632326, ECO:0000269	PubMed:15857420}. Note=Disease susceptibility is associated with variations affecting the gene represented in this entry.,	EDTA Blood Sample

Otoimmün Poliendokrinopati Sendromu, Tip 1, ± Otozomal Dominant, Geri Dönüşümlü Metaflzyal Displazi, 240300, Otozomal Resesif; APS1 (Otoimmün Poliendokrinopati Tip 1) (AIRE geni) (Tüm Gen Dizi Analizi) (Postnatal)	Autoimmune polyendocrinopathy syndrome, type I, with or without reversible metaphyseal dysplasia, 240300, Autosomal recessive, Autosomal dominant; APS1 (Autoimmune polyendocrinopathy type 1) (AIRE gene) (Sequence Analysis-All Coding Exons) (Postnatal)	AIRE	AIRE, APECED, APS1	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	DISEASE: Autoimmune polyendocrine syndrome 1, with or without reversible metaphyseal dysplasia (APS1) [MIM:240300]: A rare disease characterized by the combination of chronic mucocutaneous candidiasis, hypoparathyroidism and Addison disease. Symptoms of mucocutaneous candidiasis manifest first, followed by hypotension or fatigue occurring as a result of Addison disease. APS1 is associated with other autoimmune disorders including diabetes mellitus, vitiligo, alopecia, hepatitis, pernicious anemia and primary hypothyroidism. {ECO:0000269|PubMed:10677297, ECO:0000269|PubMed:11275943, ECO:0000269|PubMed:11524731, ECO:0000269|PubMed:11524733, ECO:0000269|PubMed:11600535, ECO:0000269|PubMed:11836330, ECO:0000269|PubMed:12050215, ECO:0000269|PubMed:12173802, ECO:0000269|PubMed:12625412, ECO:0000269|PubMed:15712268, ECO:0000269|PubMed:9398839, ECO:0000269|PubMed:9888391}. Note=The disease is caused by mutations affecting the gene represented in this entry. Most of the mutations alter the nucleus-cytoplasm distribution of AIRE and disturb its association with nuclear dots and cytoplasmic filaments. Most of the mutations also decrease transactivation of the protein. The HSR domain is responsible for the homomultimerization activity of AIRE. All the missense mutations of the HSR and the SAND domains decrease this activity, but those in other domains do not. The AIRE protein is present in soluble high-molecular-weight complexes. Mutations in the HSR domain and deletion of PHD zinc fingers disturb the formation of these complexes. {PubMed:14974083}.	EDTA Blood Sample

The result is fragile bones and an increased risk of fractures, even after minimal trauma. Osteoporosis is a chronic condition of multifactorial etiology and is usually clinically silent until a fracture occurs. {ECO:0000269|PubMed:23644456}. Note=Disease susceptibility may be associated with variations affecting the gene represented in this entry. A LGR4 nonsense mutation creating a stop codon after position 126 (c.376C>T) is strongly associated with low bone mineral density and osteoporotic fractures (PubMed:23644456). This mutation probably causes degradation of the transcript by nonsense-mediated decay (NMD). The c.376C>T mutation is also associated with electrolyte imbalance, late onset of menarche and reduced testosterone levels, as well as an increased risk of squamous cell carcinoma of the skin and biliary tract cancer (PubMed:23644456). {ECO:0000269|PubMed:23644456}.;	EDTA Blood Sample

Important genetic factors have been indicated by familial occurrence and bilateral involvement. Mutations at more than one locus can be involved in different families or even in the same case. {ECO:0000269|PubMed:17287723, ECO:0000269|PubMed:22241545}. Note=Disease susceptibility is associated with variations affecting the gene represented in this entry. Breast cancer susceptibility is strongly associated with PALB2 truncating mutations. Conversely, rare missense mutations do not strongly influence breast cancer risk (PubMed:22241545). {ECO:0000269|PubMed:22241545}.	EDTA Blood Sample
Meme Kanseri, Yatkınlık, 114480, Otozomal Dominant (Kalıtsal Meme Kanseri) (HMMR geni) (Tüm Gen Dizi Analizi) (Postnatal)	Breast cancer, susceptibility to, 114480, Autosomal dominant (Hereditary breast cancer) (HMMR gene) (Sequence Analysis-All Coding Exons) (Postnatal)	HMMR	HMMR	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	. Cantu Sendromu (Hipertrikotik Osteokondrodisplazi, Cantu Tipi) (ABCC9 geni) (Tüm Gen Dizi Analizi) (Postnatal)	CANTU SYNDROME (Hypertrichotic osteochondrodysplasia, Cantu type) (ABCC9 gene) (Sequence Analysis-All Coding Exons) (Postnatal)	ABCC9	ABCC9, SUR2, CMD1O, ATPB12, CANTU	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	DISEASE: Hypertrichotic osteochondrodysplasia (HTOCD) [MIM:239850]: A rare disorder characterized by congenital hypertrichosis, neonatal macrosomia, a distinct osteochondrodysplasia, and cardiomegaly. The hypertrichosis leads to thick scalp hair, which extends onto the forehead, and a general increase in body hair. In addition, macrocephaly and coarse facial features, including a broad nasal bridge, epicanthal folds, a wide mouth, and full lips, can be suggestive of a storage disorder. About half of affected individuals are macrosomic and edematous at birth, whereas in childhood they usually have a muscular appearance with little subcutaneous fat. Thickened calvarium, narrow thorax, wide ribs, flattened or ovoid vertebral bodies, cova valga, osteopenia, enlarged medullary canals, and metaphyseal widening of long bones have been reported. Cardiac manifestations such as patent ductus arteriosus, ventricular hypertrophy, pulmonary hypertension, and pericardial effusions are present in approximately 80% of cases. Motor development is usually delayed due to hypotonia. Most patients have a mild speech delay, and a small percentage have learning difficulties or intellectual disability. (ECO:0000269|PubMed:22608503, ECO:0000269|PubMed:22610116). Note=The disease is caused by mutations affecting the gene represented in this entry.;	EDTA Blood Sample

Note=Disease susceptibility is associated with variations affecting the gene represented in this entry.	EDTA Blood Sample
Kardiyak Aritmi, Ankirin-B İle İlişkili, 600919, Otozomal Dominant (Ailesel Uzun QT Sendromu) (ANK2 geni) (Tüm Gen Dizi Analizi) (Postnatal)	Cardiac arrhythmia, ankyrin-B-related, 600919, Autosomal dominant (Familial long QT syndrome) (ANK2 gene) (Sequence Analysis-All Coding Exons) (Postnatal)	ANK2	ANK2, LQT4	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	DISEASE: Long QT syndrome 4 (LQT4) [MIM:600919]: A heart disorder characterized by a prolonged QT interval on the ECG and polymorphic ventricular arrhythmias. They cause syncope and sudden death in response to exercise or emotional stress, and can present with a sentinel event of sudden cardiac death in infancy. Long QT syndrome type 4 shows many atypical features compared to classical long QT syndromes, including pronounced sinus bradycardia, polyphasic T waves and atrial fibrillation. Cardiac repolarization defects may be not as severe as in classical LQT syndromes and prolonged QT interval on EKG is not a consistent feature. {ECO:0000269|PubMed:12571597, ECO:0000269|PubMed:15178757}. Note=The disease is caused by mutations affecting the gene represented in this entry.;	EDTA Blood Sample
Kardiyak İletim Defekti, Nonspesifik, 612838 (Ailesel Progresif Kardiyak İletim Defekti) (SCN1B geni) (Tüm Gen Dizi Analizi) (Postnatal)	Cardiac conduction defect, nonspecific, 612838 (Familial progressive cardiac conduction defect) (SCN1B gene) (Sequence Analysis-All Coding Exons) (Postnatal)	SCN1B	SCN1B, GEFSP1, BRGDA5, ATFB13, EIEE52	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	DISEASE: Brugada syndrome 5 (BRGDA5) [MIM:612838]: A tachyarrhythmia characterized by right bundle branch block and ST segment elevation on an electrocardiogram (ECG). It can cause the ventricles to beat so fast that the blood is prevented from circulating efficiently in the body. When this situation occurs, the individual will faint and may die in a few minutes if the heart is not reset. {ECO:0000269	PubMed:18464934}. Note=The disease is caused by mutations affecting the gene represented in this entry.	EDTA Blood Sample
Kardiyak İletim Defekti, Yaşlanmış, 115080, Otozomal Dominant (Ailesel Progresif Kardiyak İletim Defekti) (AKAP10 geni) (Tüm Gen Dizi Analizi) (Postnatal)	Cardiac conduction defect, susceptibility to, 115080, Autosomal dominant (Familial progressive cardiac conduction defect) (AKAP10 gene) (Sequence Analysis-All Coding Exons) (Postnatal)	AKAP10	AKAP10	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	DISEASE: Sudden cardiac death (SCD) [MIM:115080]: Unexpected rapid death due to cardiovascular collapse in a short time period, generally within one hour of initial symptoms. It is usually caused by the worsening of existing heart diseases. The sudden onset of symptoms, such as chest pain and cardiac arrhythmias, particularly ventricular tachycardia, can lead to the loss of consciousness and cardiac arrest followed by biological death. {ECO:0000269	PubMed:17485678}. Note=Disease susceptibility is associated with variations affecting the gene represented in this entry. Increased susceptibility to sudden cardiac death may be conferred by AKAP10 variants that are associated with markers of low vagus nerve sensitivity, e.g. fast basal heart rate and low heart rate variability.;	EDTA Blood Sample
Kalp İletim Hastalığı, ± Dilate Kardiyomiyopati, 616117, Otozomal Dominant; CCDD (Ailesel Atriyal Taşiaritmi-Ait-Hisian Kardiyak İletim Hastalığı) (TNNI3K geni) (Tüm Gen Dizi Analizi) (Postnatal)	Cardiac conduction disease with or without dilated cardiomyopathy, 616117, Autosomal dominant; CCDD (Familial atrial tachyarrhythmia-infra-Hisian cardiac conduction disease) (TNNI3K gene) (Sequence Analysis-All Coding Exons) (Postnatal)	TNNI3K	TNNI3K, CCDD	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	DISEASE: Cardiac conduction disease with or without dilated cardiomyopathy (CCDD) [MIM:616117]: A cardiac disorder characterized by atrial tachyarrhythmia and conduction system disease. Some patients have dilated cardiomyopathy. {ECO:0000269	PubMed:24925317}. Note=The disease is caused by mutations affecting the gene represented in this entry.;	EDTA Blood Sample

Kardiyomiyopati, Dilate, 1 FF; 613286; CMD1FF (Alleseİ İzole Dilate Kardiyomiyopati) (TNNI3 geni) (Tüm Gen Dizi Analizi) (Postnatal)	Cardiomyopathy, dilated, 1FF, 613286; CMD1FF (Familial isolated dilated cardiomyopathy) (TNNI3 gene) (Sequence Analysis-All Coding Exons) (Postnatal)	TNNI3	TNNI3, CMH7, CMD2A, RCM1, CMD1FF	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	.	EDTA Blood Sample
Kardiyomiyopati, Dilate, 1G, 604145 (Alleseİ İzole Dilate Kardiyomiyopati) (TTN geni) (Tüm Gen Dizi Analizi) (Postnatal)	Cardiomyopathy, dilated, 1G, 604145 (Familial isolated dilated cardiomyopathy) (TTN gene) (Sequence Analysis-All Coding Exons) (Postnatal)	TTN	TTN, CMD1G, TMD, LGMD2J, MPRM, HMERF, EOMFC	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	.	EDTA Blood Sample
Kardiyomiyopati, Dilate, 1G; Cmd1g (Alleseİ İzole Dilate Kardiyomiyopati) (TTN geni) (Tüm Gen Dizi Analizi) (Postnatal)	CARDIOMYOPATHY, DILATED, 1G; CMD1G (Familial isolated dilated cardiomyopathy) (TTN gene) (Sequence Analysis-All Coding Exons) (Postnatal)	TTN	TTN, CMD1G, TMD, LGMD2J, MPRM, HMERF, EOMFC	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	.	EDTA Blood Sample
Kardiyomiyopati, Dilate, 1HH, 613881, Otozomal Dominant; CMD1HH (Alleseİ İzole Dilate Kardiyomiyopati) (BAG3 geni) (Tüm Gen Dizi Analizi) (Postnatal)	Cardiomyopathy, dilated, 1HH, 613881, Autosomal dominant; CMD1HH (Familial isolated dilated cardiomyopathy) (BAG3 gene) (Sequence Analysis-All Coding Exons) (Postnatal)	BAG3	BAG3, MFM6	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	.	EDTA Blood Sample
Kardiyomiyopati, Dilate, 1I, 604765; CMD1I (Alleseİ İzole Dilate Kardiyomiyopati) (DES geni) (Tüm Gen Dizi Analizi) (Postnatal)	Cardiomyopathy, dilated, 1I, 604765; CMD1I (Familial isolated dilated cardiomyopathy) (DES gene) (Sequence Analysis-All Coding Exons) (Postnatal)	DES	DES, CMD1I, MFM1, SCPNK, ARVD7, ARVC7, LGMD2R	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	.	EDTA Blood Sample
Kardiyomiyopati, Dilate, 1II, 615184, Otozomal Dominant; CMD1II (Early-Onset Lamellar Cataract) (CRYAB geni) (Tüm Gen Dizi Analizi) (Postnatal)	Cardiomyopathy, dilated, 1II, 615184, Autosomal dominant; CMD1II (Early-onset lamellar cataract) (CRYAB gene) (Sequence Analysis-All Coding Exons) (Postnatal)	CRYAB	CRYAB, CRYA2, CTPP2, CMD1II, CTRCT16, MFM2	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	.	EDTA Blood Sample
Kardiyomiyopati, Dilate, 1J, 605362 (Sensorinöral Sağırlık-Dilate Kardiyomiyopati) (EYA4 geni) (Tüm Gen Dizi Analizi) (Postnatal)	Cardiomyopathy, dilated, 1J, 605362 (Sensorineural deafness with dilated cardiomyopathy) (EYA4 gene) (Sequence Analysis-All Coding Exons) (Postnatal)	EYA4	EYA4, DFNA10, CMD1J	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	DISEASE: Cardiomyopathy, dilated 1J (CMD1J) [MIM:605362]: A disorder characterized by ventricular dilation and impaired systolic function, resulting in congestive heart failure and arrhythmia. Patients are at risk of premature death. CMD1J is characterized by the association of sensorineural hearing loss and dilated cardiomyopathy in the absence of other anomalies. {ECO:0000269|PubMed:15735644}. Note=The disease is caused by mutations affecting the gene represented in this entry.,	EDTA Blood Sample
Kardiyomiyopati, Dilate, 1JJ, 615235, Otozomal Dominant; CMD1JJ (Alleseİ İzole Dilate Kardiyomiyopati) (LAMA4 geni) (Tüm Gen Dizi Analizi) (Postnatal)	Cardiomyopathy, dilated, 1JJ, 615235, Autosomal dominant; CMD1JJ (Familial isolated dilated cardiomyopathy) (LAMA4 gene) (Sequence Analysis-All Coding Exons) (Postnatal)	LAMA4	LAMA4, LAMA3, CMD1JJ	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	DISEASE: Cardiomyopathy, dilated 1JJ (CMD1JJ) [MIM:615235]: A disorder characterized by ventricular dilation and impaired systolic function, resulting in congestive heart failure and arrhythmia. Patients are at risk of premature death. {ECO:0000269|PubMed:17646580}. Note=The disease is caused by mutations affecting the gene represented in this entry.,	EDTA Blood Sample
Kardiyomiyopati, Dilate, 1KK, 615248, Otozomal Dominant; CMD1KK (Alleseİ İzole Dilate Kardiyomiyopati) (MYPN geni) (Tüm Gen Dizi Analizi) (Postnatal)	Cardiomyopathy, dilated, 1KK, 615248, Autosomal dominant; CMD1KK (Familial isolated dilated cardiomyopathy) (MYPN gene) (Sequence Analysis-All Coding Exons) (Postnatal)	MYPN	MYPN, CMD1DD, CMH22, RCM4, NEM11	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	DISEASE: Cardiomyopathy, familial hypertrophic 22 (CMH22) [MIM:615248]: A hereditary heart disorder characterized by ventricular hypertrophy, which is usually asymmetric and often involves the interventricular septum. The symptoms include dyspnea, syncope, collapse, palpitations, and chest pain. They can be readily provoked by exercise. The disorder has inter- and intrafamilial variability ranging from benign to malignant forms with high risk of cardiac failure and sudden cardiac death. {ECO:0000269|PubMed:22286171}. Note=The disease is caused by mutations affecting the gene represented in this entry.	EDTA Blood Sample
Kardiyomiyopati, Dilate, 1L, 606685; CMD1L (Alleseİ İzole Dilate Kardiyomiyopati) (SGCD geni) (Tüm Gen Dizi Analizi) (Postnatal)	Cardiomyopathy, dilated, 1L, 606685; CMD1L (Familial isolated dilated cardiomyopathy) (SGCD gene) (Sequence Analysis-All Coding Exons) (Postnatal)	SGCD	SGCD, SGD, LGMD2F, CMD1L	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	.	EDTA Blood Sample
Kardiyomiyopati, Dilate, 1L, 606685; CMD1L (Alleseİ İzole Dilate Kardiyomiyopati) (MLPA)	Cardiomyopathy, dilated, 1L, 606685; CMD1L (Familial isolated dilated cardiomyopathy) (MLPA)	SGCD	SGCD, SGD, LGMD2F, CMD1L	MLPA (CNV)	EDTA'lı Kan (2-4 ml)		20	60	.	.	30	Postnatal	.	EDTA Blood Sample
Kardiyomiyopati, Dilate, 1LL, 615373, Otozomal Dominant (Alleseİ İzole Dilate Kardiyomiyopati) (PRDM16 geni) (Tüm Gen Dizi Analizi) (Postnatal)	Cardiomyopathy, dilated, 1LL, 615373, Autosomal dominant (Familial isolated dilated cardiomyopathy) (PRDM16 gene) (Sequence Analysis-All Coding Exons) (Postnatal)	PRDM16	PRDM16, MEL1, LVNC8, CMD1LL	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	DISEASE: Cardiomyopathy, dilated 1LL (CMD1LL) [MIM:615373]: A disorder characterized by ventricular dilation and impaired systolic function, resulting in congestive heart failure and arrhythmia. Patients are at risk of premature death. {ECO:0000269|PubMed:23768516}. Note=The disease is caused by mutations affecting the gene represented in this entry.	EDTA Blood Sample
Kardiyomiyopati, Dilate, 1M, 607482; CMD1M (Alleseİ İzole Dilate Kardiyomiyopati) (CSRP3 geni) (Tüm Gen Dizi Analizi) (Postnatal)	Cardiomyopathy, dilated, 1M, 607482; CMD1M (Familial isolated dilated cardiomyopathy) (CSRP3 gene) (Sequence Analysis-All Coding Exons) (Postnatal)	CSRP3	CSRP3, CRP3, CLP, CMD1M, CMH12	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	.	EDTA Blood Sample
Kardiyomiyopati, Dilate, 1MM, 615396, Otozomal Dominant (Alleseİ İzole Dilate Kardiyomiyopati) (MYBPC3 geni) (Tüm Gen Dizi Analizi) (Postnatal)	Cardiomyopathy, dilated, 1MM, 615396, Autosomal dominant (Familial isolated dilated cardiomyopathy) (MYBPC3 gene) (Sequence Analysis-All Coding Exons) (Postnatal)	MYBPC3	MYBPC3, CMH4, CMD1MM, LVNC10	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	.	EDTA Blood Sample
Kardiyomiyopati, Dilate, 1NN, 615916, Otozomal Dominant; CMD1NN (Alleseİ İzole Dilate Kardiyomiyopati) (RAF1 geni) (Tüm Gen Dizi Analizi) (Postnatal)	Cardiomyopathy, dilated, 1NN, 615916, Autosomal dominant; CMD1NN (Familial isolated dilated cardiomyopathy) (RAF1 gene) (Sequence Analysis-All Coding Exons) (Postnatal)	RAF1	RAF1, CRAF, NS5, CMD1NN	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	.	EDTA Blood Sample
Kardiyomiyopati, Dilate, 1O, 608569; CMD1O (Alleseİ İzole Dilate Kardiyomiyopati) (ABCC9 geni) (Tüm Gen Dizi Analizi) (Postnatal)	Cardiomyopathy, dilated, 1O, 608569; CMD1O (Familial isolated dilated cardiomyopathy) (ABCC9 gene) (Sequence Analysis-All Coding Exons) (Postnatal)	ABCC9	ABCC9, SUR2, CMD1O, ATFB12, CANTU	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	.	EDTA Blood Sample
Kardiyomiyopati, Dilate, 1P, 609909; CMD1P (Alleseİ İzole Dilate Kardiyomiyopati) (PLN geni) (Tüm Gen Dizi Analizi) (Postnatal)	Cardiomyopathy, dilated, 1P, 609909; CMD1P (Familial isolated dilated cardiomyopathy) (PLN gene) (Sequence Analysis-All Coding Exons) (Postnatal)	PLN	PLN, PLB, CMD1P, CMH18	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	DISEASE: Cardiomyopathy, dilated 1P (CMD1P) [MIM:609909]: A disorder characterized by ventricular dilation and impaired systolic function, resulting in congestive heart failure and arrhythmia. Patients are at risk of premature death. {ECO:0000269|PubMed:12610310, ECO:0000269|PubMed:16432188, ECO:0000269|PubMed:22137083}. Note=The disease is caused by mutations affecting the gene represented in this entry.	EDTA Blood Sample
Kardiyomiyopati, Dilate, 1R, 613424, Otozomal Dominant; CMD1R (Alleseİ İzole Dilate Kardiyomiyopati) (ACTC1 geni) (Tüm Gen Dizi Analizi) (Postnatal)	Cardiomyopathy, dilated, 1R, 613424, Autosomal dominant; CMD1R (Familial isolated dilated cardiomyopathy) (ACTC1 gene) (Sequence Analysis-All Coding Exons) (Postnatal)	ACTC1	ACTC1, CMD1R, CMH11, ASD5, LVNC4	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	.	EDTA Blood Sample
Kardiyomiyopati, Dilate, 1S, 613426, Otozomal Dominant; CMD1S (Alleseİ İzole Dilate Kardiyomiyopati) (MYH7 geni) (Tüm Gen Dizi Analizi) (Postnatal)	Cardiomyopathy, dilated, 1S, 613426, Autosomal dominant; CMD1S (Familial isolated dilated cardiomyopathy) (MYH7 gene) (Sequence Analysis-All Coding Exons) (Postnatal)	MYH7	MYH7, CMH1, MPD1, CMD1S, SPMM, SPMD	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	.	EDTA Blood Sample
Kardiyomiyopati, Dilate, 1U, 613694, Otozomal Dominant; CMD1U (Alleseİ İzole Dilate Kardiyomiyopati) (PSEN1 geni) (Tüm Gen Dizi Analizi) (Postnatal)	Cardiomyopathy, dilated, 1U, 613694, Autosomal dominant; CMD1U (Familial isolated dilated cardiomyopathy) (PSEN1 gene) (Sequence Analysis-All Coding Exons) (Postnatal)	PSEN1	PSEN1, AD3	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	.	EDTA Blood Sample
Kardiyomiyopati, Dilate, 1V, 613697, Otozomal Dominant; CMD1V (Alleseİ İzole Dilate Kardiyomiyopati) (PSEN2 geni) (Tüm Gen Dizi Analizi) (Postnatal)	Cardiomyopathy, dilated, 1V, 613697, Autosomal dominant; CMD1V (Familial isolated dilated cardiomyopathy) (PSEN2 gene) (Sequence Analysis-All Coding Exons) (Postnatal)	PSEN2	PSEN2, AD4, STM2, CMD1V	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	.	EDTA Blood Sample
Kardiyomiyopati, Dilate, 1W, 611407; CMD1W (Alleseİ İzole Dilate Kardiyomiyopati) (VCL geni) (Tüm Gen Dizi Analizi) (Postnatal)	Cardiomyopathy, dilated, 1W, 611407; CMD1W (Familial isolated dilated cardiomyopathy) (VCL gene) (Sequence Analysis-All Coding Exons) (Postnatal)	VCL	VCL, CMD1W, CMH15	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	DISEASE: Cardiomyopathy, dilated 1W (CMD1W) [MIM:611407]: A disorder characterized by ventricular dilation and impaired systolic function, resulting in congestive heart failure and arrhythmia. Patients are at risk of premature death. {ECO:0000269|PubMed:11815434, ECO:0000269|PubMed:16236538}. Note=The disease is caused by mutations affecting the gene represented in this entry.	EDTA Blood Sample
Kardiyomiyopati, Dilate, 1X, 611615, Otozomal Resesif; CMD1X (Alleseİ İzole Dilate Kardiyomiyopati) (FKTN geni) (Tüm Gen Dizi Analizi) (Postnatal)	Cardiomyopathy, dilated, 1X, 611615, Autosomal recessive; CMD1X (Familial isolated dilated cardiomyopathy) (FKTN gene) (Sequence Analysis-All Coding Exons) (Postnatal)	FKTN	FKTN, FCMD, CMD1X, LGMD2M, MDDGA4, MDDGB4, MDDGC4	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	.	EDTA Blood Sample

Kardiyomiyopati, Dilate, 1Y, 611878, Otozomal Dominant, CMD1Y (Aileseİ Izole Dilate Kardiyomiyopati) (TPM1 geni) (Tüm Gen Dizi Analizi) (Postnatal)	Cardiomyopathy, dilated, 1Y, 611878, Autosomal dominant; CMD1Y (Familial isolated dilated cardiomyopathy) (TPM1 gene) (Sequence Analysis-All Coding Exons) (Postnatal)	TPM1	TPM1, CMH3, CMD1Y , LVNC9	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	.	EDTA Blood Sample
Kardiyomiyopati, Dilate, 1Z, 611879; CMD1Z (Aileseİ Izole Dilate Kardiyomiyopati) (TNNC1 geni) (Tüm Gen Dizi Analizi) (Postnatal)	Cardiomyopathy, dilated, 1Z, 611879; CMD1Z (Familial isolated dilated cardiomyopathy) (TNNC1 gene) (Sequence Analysis-All Coding Exons) (Postnatal)	TNNC1	TNNC1, CMD1Z, CMH13	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	.	EDTA Blood Sample
Kardiyomiyopati, Dilate, 2A, 611880, Otozomal Resesif, CMD2A (Aileseİ Izole Dilate Kardiyomiyopati) (TNNI3 geni) (Tüm Gen Dizi Analizi) (Postnatal)	Cardiomyopathy, dilated, 2A, 611880, Autosomal recessive; CMD2A (Familial isolated dilated cardiomyopathy) (TNNI3 gene) (Sequence Analysis-All Coding Exons) (Postnatal)	TNNI3	TNNI3, CMH7, CMD2A, RCM1, CMD1FF	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	.	EDTA Blood Sample
Kardiyomiyopati, Dilate, 2B, 614672, Otozomal Resesif, CMD2B (Aileseİ Izole Dilate Kardiyomiyopati) (GATAD1 geni) (Tüm Gen Dizi Analizi) (Postnatal)	Cardiomyopathy, dilated, 2B, 614672, Autosomal recessive; CMD2B (Familial isolated dilated cardiomyopathy) (GATAD1 gene) (Sequence Analysis-All Coding Exons) (Postnatal)	GATAD1	GATAD1, ODAG, CMD2B	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	.	EDTA Blood Sample
Kardiyomiyopati, Dilate, 3B, 302045, X'e Bağlı; CMD3B (Aileseİ Izole Dilate Kardiyomiyopati) (DMD geni) (Tüm Gen Dizi Analizi) (Postnatal)	Cardiomyopathy, dilated, 3B, 302045, X-linked; CMD3B (Familial isolated dilated cardiomyopathy) (DMD gene) (Sequence Analysis-All Coding Exons) (Postnatal)	DMD	DMD, BMD, CMD3B	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	.	EDTA Blood Sample
Kardiyomiyopati, Dilate, 3B, 302045, X'e Bağlı; CMD3B (Aileseİ Izole Dilate Kardiyomiyopati) (MLPA)	Cardiomyopathy, dilated, 3B, 302045, X-linked; CMD3B (Familial isolated dilated cardiomyopathy) (MLPA)	DMD	DMD, BMD, CMD3B	MLPA (CNV)	EDTA'lı Kan (2-4 ml)	*	20	60	.	.	30	Postnatal	.	EDTA Blood Sample
Kardiyomiyopati, Dilate, Hipergonadotropik Hipogonadizm (Dilate Kardiyomiyopati-Hipergonadotropik Hipogonadizm Sendromu (Malouf Sendromu)) (LMNA geni) (Tüm Gen Dizi Analizi) (Postnatal)	CARDIOMYOPATHY, DILATED, WITH HYPERGONADOTROPIC HYPOGONADISM (Dilated cardiomyopathy-hypergonadotropic hypogonadism syndrome) (LMNA gene) (Sequence Analysis-All Coding Exons) (Postnatal)	LMNA	LMNA, LMN1, EMD2, FPLD2, CMD1A, HGPS, LGMD1B	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	.	EDTA Blood Sample
Kardiyomiyopati, Dilate, Hipergonadotropik Hipogonadizm (Dilate Kardiyomiyopati-Hipergonadotropik Hipogonadizm Sendromu (Malouf Sendromu)) (MLPA)	CARDIOMYOPATHY, DILATED, WITH HYPERGONADOTROPIC HYPOGONADISM (Dilated cardiomyopathy-hypergonadotropic hypogonadism syndrome) (MLPA)	LMNA	LMNA, LMN1, EMD2, FPLD2, CMD1A, HGPS, LGMD1B	MLPA (CNV)	EDTA'lı Kan (2-4 ml)		20	60	.	.	30	Postnatal	. Opacities vary in morphology, are often confined to a portion of the lens, and may be static or progressive. CTRCT10 includes congenital zonular with sutural opacities, among others. This is a form of zonular cataract with an erect Y-shaped anterior and an inverted Y-shaped posterior sutural opacities. Zonular or lamellar cataracts are opacities, broad or narrow, usually consisting of powdery white dots affecting only certain layers or zones between the cortex and nucleus of an otherwise clear lens. The opacity may be so dense as to render the entire central region of the lens completely opaque, or so translucent that vision is hardly if at all impeded. Zonular cataracts generally do not involve the embryonic nucleus, though sometimes they involve the fetal nucleus. Usually sharply separated from a clear cortex outside them, they may have projections from their outer edges known as riders or spokes. (ECO:0000269|PubMed:15016766, ECO:0000269|PubMed:9788845). Note=The disease is caused by mutations affecting the gene represented in this entry.;	EDTA Blood Sample
Katarakt 11, Çeşitli Tipler, 610623, Otozomal Dominant; CTRCT11 (Erken Başlangıçlı Sendromik Olmayan Katarakt) (PITX3 geni) (Tüm Gen Dizi Analizi) (Postnatal)	Cataract 11, multiple types, 610623, Autosomal dominant; CTRCT11 (Early-onset non-syndromic cataract) (PITX3 gene) (Sequence Analysis-All Coding Exons) (Postnatal)	PITX3	PITX3, CTPP4, CTRCT11, ASGD1	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	DISEASE: Cataract 11, multiple types (CTRCT11) [MIM:610623]: An opacification of the crystalline lens of the eye that frequently results in visual impairment or blindness. Opacities vary in morphology, are often confined to a portion of the lens, and may be static or progressive. CTRCT11 includes posterior polar cataract, among others. Posterior polar cataract is a subcapsular opacity, usually disk-shaped, located at the back of the lens. Some CTRCT11 patients can present a severe phenotype including microphthalmia and neurological dysfunction. (ECO:0000269|PubMed:15286169, ECO:0000269|PubMed:9620774). Note=The disease is caused by mutations affecting the gene represented in this entry.;	EDTA Blood Sample
Katarakt 12, Çeşitli Tipler, 611597, Otozomal Dominant; CTRCT12 (Erken Başlangıçlı Sendromik Olmayan Katarakt) (BFSP2 geni) (Tüm Gen Dizi Analizi) (Postnatal)	Cataract 12, multiple types, 611597, Autosomal dominant; CTRCT12 (Early-onset non-syndromic cataract) (BFSP2 gene) (Sequence Analysis-All Coding Exons) (Postnatal)	BFSP2	BFSP2, CP49, CP47, CTRCT12	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	. Katarakt 4, Çeşitli Tipler, 115700, Otozomal Dominant; CTRCT4 (Katarakt-Mikrokornea Sendromu) (CRYGD geni) (Tüm Gen Dizi Analizi) (Postnatal)	Cataract 4, multiple types, 115700, Autosomal dominant; CTRCT4 (Cataract-microcornea syndrome) (CRYGD gene) (Sequence Analysis-All Coding Exons) (Postnatal)	CRYGD	CRYGD, CRYG4, CTRCT4, CACA, CCA3, PCC	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	DISEASE: Cataract 4, multiple types (CTRCT4) [MIM:115700]: An opacification of the crystalline lens of the eye that frequently results in visual impairment or blindness. Opacities vary in morphology, are often confined to a portion of the lens, and may be static or progressive. CTRCT4 includes crystalline aculeiform, congenital cerulean and non-nuclear polymorphic cataracts, among others. Crystalline aculeiform cataract is characterized by fiberglass-like or needle-like crystals projecting in different directions, through or close to the axial region of the lens. Non-nuclear polymorphic cataract is a partial opacity with variable location between the fetal nucleus of the lens and the equator. The fetal nucleus is normal. The opacities are irregular and look similar to a bunch of grapes and may be present simultaneously in different lens layers. Congenital cerulean cataract is characterized by peripheral bluish and white opacifications organized in concentric layers with occasional central lesions arranged radially. The opacities are observed in the superficial layers of the fetal nucleus as well as the adult nucleus of the lens. Involvement is usually bilateral. Visual acuity is only mildly reduced in childhood. In adulthood, the opacifications may progress, making lens extraction necessary. Histologically the lesions are described as fusiform cavities between lens fibers which contain a deeply staining granular material. Although the lesions may take on various colors, a dull blue is the most common appearance and is responsible for the designation cerulean cataract. {ECO:0000269|PubMed:10521291, ECO:0000269|PubMed:10915766, ECO:0000269|PubMed:12011157, ECO:0000269|PubMed:12676897, ECO:0000269|PubMed:16943771, ECO:0000269|PubMed:17564961, ECO:0000269|PubMed:21051598	EDTA Blood Sample

Katarakt 40, X'e Bağlı, 302200, X'e Bağlı; CTRCT40 (Erken Başlangıçlı Sendromik Olmayan Katarakt) (NHS geni) (Tüm Gen Dizi Analizi) (Postnatal)	Cataract 40, X-linked, 302200, X-linked, CTRCT40 (Early-onset non-syndromic cataract) (NHS gene) (Sequence Analysis-All Coding Exons) (Postnatal)	NHS	NHS, CXN, CTRCT40	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	DISEASE: Cataract 40 (CTRCT40) [MIM:302200]: An opacification of the crystalline lens of the eye that frequently results in visual impairment or blindness. Opacities vary in morphology, are often confined to a portion of the lens, and may be static or progressive. CTRCT40 manifests as a congenital nuclear opacity with severe visual impairment in affected males. Heterozygous females have suture cataracts and only slight reduction in vision. In some cases, cataract is associated with microcornea without any other systemic anomaly or dysmorphism. Microcornea is defined by a corneal diameter inferior to 10 mm in both meridians in an otherwise normal eye. {ECO:0000269	PubMed:19414485}. Note=The disease is caused by mutations affecting the gene represented in this entry. Caused by copy number variations predicted to result in altered transcriptional regulation of the NHS gene: a 0.8 Mb segmental duplication-triplication encompassing the NHS, SCML1 and RAI2 genes, and an 4.8 kb intragenic deletion in NHS intron 1.;	EDTA Blood Sample

Sentronükleer Miyopati 5, 615959, Otozomal Resesif (Otozomal Resesif Santronükleer Miyopati) (SPEG geni) (Tüm Gen Dizi Analizi) (Postnatal)	Centronuclear myopathy 5, 615959, Autosomal recessive (Autosomal recessive centronuclear myopathy) (SPEG gene) (Sequence Analysis-All Coding Exons) (Postnatal)	SPEG	SPEG, APEG1, CNM5	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	DISEASE: Myopathy, centronuclear, 5 (CNM5) [MIM:615959]: A form of centronuclear myopathy, a congenital muscle disorder characterized by progressive muscular weakness and wasting involving mainly limb girdle, trunk, and neck muscles. It may also affect distal muscles. Weakness may be present during childhood or adolescence or may not become evident until the third decade of life. Ptosis is a frequent clinical feature. The most prominent histopathologic features include high frequency of centrally located nuclei in muscle fibers not secondary to regeneration, radial arrangement of sarcoplasmic strands around the central nuclei, and predominance and hypotrophy of type 1 fibers. CNM5 features include severe neonatal hypotonia with respiratory insufficiency, difficulty feeding, and delayed motor development. Some patients die in infancy, and some develop dilated cardiomyopathy. (ECO:0000269	PubMed:25087613). Note=The disease is caused by mutations affecting the gene represented in this entry.;	EDTA Blood Sample
Sentronükleer Miyopati 5, 615959, Otozomal Resesif (Otozomal Resesif Santronükleer Miyopati) (Prenatal) (SPEG geni) (Tüm Gen Dizi Analizi) (Prenatal)	Centronuclear myopathy 5, 615959, Autosomal recessive (Autosomal recessive centronuclear myopathy) (SPEG gene) (Sequence Analysis-All Coding Exons) (Prenatal)	SPEG	SPEG, APEG1, CNM5	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	Amniyon sıvısı / CVS / Heparinli ve EDTA'lı (İKİSİ BİRDEN) kordon kanı VE ANNEDEN EDTA'LI KAN		.	.	15	30	20	Prenatal	DISEASE: Myopathy, centronuclear, 5 (CNM5) [MIM:615959]: A form of centronuclear myopathy, a congenital muscle disorder characterized by progressive muscular weakness and wasting involving mainly limb girdle, trunk, and neck muscles. It may also affect distal muscles. Weakness may be present during childhood or adolescence or may not become evident until the third decade of life. Ptosis is a frequent clinical feature. The most prominent histopathologic features include high frequency of centrally located nuclei in muscle fibers not secondary to regeneration, radial arrangement of sarcoplasmic strands around the central nuclei, and predominance and hypotrophy of type 1 fibers. CNM5 features include severe neonatal hypotonia with respiratory insufficiency, difficulty feeding, and delayed motor development. Some patients die in infancy, and some develop dilated cardiomyopathy. (ECO:0000269	PubMed:25087613). Note=The disease is caused by mutations affecting the gene represented in this entry.;	Amniotic Fluid / CVS / Heparinized and EDTA (BOTH) Fetal Blood and Maternal EDTA Blood Sample
Sentronükleer Miyopati, Otozomal, Değiştirici, 160150, Otozomal Dominant (Otozomal Dominant Santronükleer Miyopati) (MTMR14 geni) (Tüm Gen Dizi Analizi) (Postnatal)	Centronuclear myopathy, autosomal, modifier of, 160150, Autosomal dominant (Autosomal dominant centronuclear myopathy) (MTMR14 gene) (Sequence Analysis-All Coding Exons) (Postnatal)	MTMR14	MTMR14, C3orf29, HJUMPY	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	. Serebral Amiloid Anjiyopati, 105150, Otozomal Dominant (Kalıtsal Serebral Hemoraji-Amiloidoz) (CST3 geni) (Tüm Gen Dizi Analizi) (Postnatal)	Cerebral amyloid angiopathy, 105150, Autosomal dominant (Hereditary cerebral hemorrhage with amyloidosis) (CST3 gene) (Sequence Analysis-All Coding Exons) (Postnatal)	CST3	CST3, ARMD11	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	DISEASE: Amyloidosis 6 (AMYL6) [MIM:105150]: A hereditary generalized amyloidosis due to cystatin C amyloid deposition. Cystatin C amyloid accumulates in the walls of arteries, arterioles, and sometimes capillaries and veins of the brain, and in various organs including lymphoid tissue, spleen, salivary glands, and seminal vesicles. Amyloid deposition in the cerebral vessels results in cerebral amyloid angiopathy, cerebral hemorrhage and premature stroke. Cystatin C levels in the cerebrospinal fluid are abnormally low. {ECO:0000269|PubMed:1352265, ECO:0000269|PubMed:2541223}. Note=The disease is caused by mutations affecting the gene represented in this entry.	EDTA Blood Sample
Serebral Amiloid Anjiyopati, Hollanda, İtalyan, Iowa, Flaman, Arktik Türevleri, 605714, Otozomal Dominant (Abeta21g Amiloidoz) (APP geni) (Tüm Gen Dizi Analizi) (Postnatal)	Cerebral amyloid angiopathy, Dutch, Italian, Iowa, Flemish, Arctic variants, 605714, Autosomal dominant (Abeta21g amyloidosis) (APP gene) (Sequence Analysis-All Coding Exons) (Postnatal)	APP	APP, AAA, CVAP, AD1	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal		EDTA Blood Sample
Serebral Amiloid Anjiyopati, Itm2b-İlgili, 1 (ITM2B Amiloidoz) (ITM2B geni) (Tüm Gen Dizi Analizi) (Postnatal)	CEREBRAL AMYLOID ANGIOPATHY, ITM2B-RELATED, 1 (ITM2B amyloidosis) (ITM2B gene) (Sequence Analysis-All Coding Exons) (Postnatal)	ITM2B	ITM2B, BRI, ABRI, FBD, RDGCA	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	DISEASE: Cerebral amyloid angiopathy, ITM2B-related 2 (CAA-ITM2B2) [MIM:117300]: A disorder characterized by amyloid deposition in the walls of the blood vessels of the cerebrum, choroid plexus, cerebellum, spinal cord and retina. Plaques and neurofibrillary tangles are observed in the hippocampus. Clinical features include progressive ataxia, dementia, cataracts and deafness. {ECO:0000269|PubMed:10781099, ECO:0000269|PubMed:14656991, ECO:0000269|PubMed:16091362}. Note=The disease is caused by mutations affecting the gene represented in this entry. A decamer duplication in the 3' region of ITM2B results in the production of the ADan amyloidogenic peptide (PubMed:10781099). ADan is generated by cleavage of the mutated precursor at the normal furin processing site. ADan accumulates in the brain and produces amyloid fibrils responsible for neuronal dysfunction and dementia. {ECO:0000269|PubMed:10781099}.	EDTA Blood Sample

Charcot-Marie-Tooth Hastalığı, Aksonal, Tip 2V, 616491, Otozomal Dominant; CMT2V (Charcot-Marie-Tooth Hastalığı, Otozomal Dominant Tip 2V) (NAGLU geni) (Tüm Gen Dizi Analizi) (Postnatal)	Charcot-Marie-Tooth disease, axonal, type 2V, 616491, Autosomal dominant; CMT2V (Autosomal dominant Charcot-Marie-Tooth disease type 2V) (NAGLU gene) (Sequence Analysis-All Coding Exons) (Postnatal)	NAGLU	NAGLU, MPS3B, CMT2V	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	DISEASE: Charcot-Marie-Tooth disease 2V (CMT2V) [MIM:616491]: An axonal form of Charcot-Marie-Tooth disease, a disorder of the peripheral nervous system, characterized by progressive weakness and atrophy, initially of the peroneal muscles and later of the distal muscles of the arms. Charcot-Marie-Tooth disease is classified in two main groups on the basis of electrophysiologic properties and histopathology: primary peripheral demyelinating neuropathies (designated CMT1 when they are dominantly inherited) and primary peripheral axonal neuropathies (CMT2). Neuropathies of the CMT2 group are characterized by signs of axonal degeneration in the absence of obvious myelin alterations, normal or slightly reduced nerve conduction velocities, and progressive distal muscle weakness and atrophy. CMT2V is an autosomal dominant sensory neuropathy with late onset. The main clinical feature is recurrent leg pain that progresses to constant painful paraesthesias in the feet and later the hands. As it evolves, some patients develop a mild sensory ataxia. {ECO:0000269|PubMed:25818967}. Note=The disease is caused by mutations affecting the gene represented in this entry.;	EDTA Blood Sample
Charcot-Marie-Tooth Hastalığı, Aksonal, Tip 2W, 616625, Otozomal Dominant; CMT2W (HARS geni) (Tüm Gen Dizi Analizi) (Postnatal)	Charcot-Marie-Tooth disease, axonal, type 2W, 616625, Autosomal dominant; CMT2W (HARS gene) (Sequence Analysis-All Coding Exons) (Postnatal)	HARS	HARS, USH3B, CMT2W	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	DISEASE: Charcot-Marie-Tooth disease 2W (CMT2W) [MIM:616625]: An autosomal dominant, axonal form of Charcot-Marie-Tooth disease, a disorder of the peripheral nervous system, characterized by progressive weakness and atrophy, initially of the peroneal muscles and later of the distal muscles of the arms. Charcot- Marie-Tooth disease is classified in two main groups on the basis of electrophysiologic properties and histopathology: primary peripheral demyelinating neuropathies (designated CMT1 when they are dominantly inherited) and primary peripheral axonal neuropathies (CMT2). Neuropathies of the CMT2 group are characterized by signs of axonal degeneration in the absence of obvious myelin alterations, normal or slightly reduced nerve conduction velocities, and progressive distal muscle weakness and atrophy. CMT2W patients manifest a peripheral neuropathy mainly affecting the lower limbs and resulting in gait difficulties and distal sensory impairment. Most patients also have upper limb involvement. {ECO:0000269|PubMed:22930593, ECO:0000269|PubMed:26072516}. It is due to defective endochondral and intramembranous bone formation. Typical features include hypoplasia/aplasia of clavicles, patent fontanelles, wormian bones (additional cranial plates caused by abnormal ossification of the calvaria), supernumerary teeth, short stature, and other skeletal changes. In some cases defects in RUNX2 are exclusively associated with dental anomalies. {ECO:0000269|PubMed:10521292, ECO:0000269|PubMed:10545612, ECO:0000269|PubMed:10689183, ECO:0000269|PubMed:10980549, ECO:0000269|PubMed:11857736, ECO:0000269|PubMed:12081718, ECO:0000269|PubMed:12196916, ECO:0000269|PubMed:12424590, ECO:0000269|PubMed:16270353, ECO:0000269|PubMed:19744171, ECO:0000269|PubMed:20082269, ECO:0000269|PubMed:20648631, ECO:0000269|PubMed:9182765, ECO:0000269|PubMed:9207800}. Patients manifest, in the neonatal period, orofacial weakness with impaired sucking and swallowing, resulting in poor feeding. Affected infants show a tendency to startle, with contractions of the facial muscles in response to tactile stimuli or during crying, trismus, abundant salivation, and opisthotonus. These features are referred to as Crisponi syndrome and can result in early death in infancy. Patients who survive into childhood have hyperhidrosis, mainly of the upper body, in response to cold temperatures, and sweat very little with heat. Additional abnormalities include a high-arched palate, nasal voice, depressed nasal bridge, inability to fully extend the elbows and kyphoscoliosis. {ECO:0000269|PubMed:12509788, ECO:0000269|PubMed:16952376, ECO:0000269|PubMed:17436251, ECO:0000269|PubMed:17436252, ECO:0000269|PubMed:21326283, ECO:0000269|PubMed:23026229, ECO:0000269|PubMed:24488861}. Kolorektal Kanser, Kalıtsal Nonpolipozis, Otozomal Dominant Tip 1, 120435 (Lynch Sendromu) (MSH2 geni) (Tüm Gen Dizi Analizi) (Postnatal)	Colorectal cancer, hereditary nonpolyposis, type 1, 120435, Autosomal dominant (Lynch syndrome) (MSH2 gene) (Sequence Analysis-All Coding Exons) (Postnatal)	MSH2	MSH2, COCA1, FCC1, HNPCC1	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		20	60	.	.	30	Postnatal	DISEASE: Hereditary non-polyposis colorectal cancer 1 (HNPCC1) [MIM:120435]: An autosomal dominant disease associated with marked increase in cancer susceptibility. It is characterized by a familial predisposition to early-onset colorectal carcinoma (CRC) and extra-colonic tumors of the gastrointestinal, urological and female reproductive tracts. HNPCC is reported to be the most common form of inherited colorectal cancer in the Western world. Clinically, HNPCC is often divided into two subgroups. Type I is characterized by hereditary predisposition to colorectal cancer, a young age of onset, and carcinoma observed in the proximal colon. Type II is characterized by increased risk for cancers in certain tissues such as the uterus, ovary, breast, stomach, small intestine, skin, and larynx in addition to the colon. Diagnosis of classical HNPCC is based on the Amsterdam criteria: 3 or more relatives affected by colorectal cancer, one a first degree relative of the other two; 2 or more generation affected; 1 or more colorectal cancers presenting before 50 years of age; exclusion of hereditary polyposis syndromes. The term 'suspected HNPCC' or 'incomplete HNPCC' can be used to describe families who do not or only partially fulfill the Amsterdam criteria, but in whom a genetic basis for colon cancer is strongly suspected. {ECO:0000269|PubMed:10375096, ECO:0000269|PubMed:10386556, ECO:0000269|PubMed:10528862, ECO:0000269|PubMed:10573010, ECO:0000269|PubMed:10612836, ECO:0000269|PubMed:10777691, ECO:0000269|PubMed:10829038, ECO:0000269|PubMed:11726306, ECO:0000269|PubMed:11870161, ECO:0000269|PubMed:11930458,	EDTA Blood Sample

Cone dystrophies are retinal dystrophies characterized by progressive degeneration of the cone photoreceptors with preservation of rod function, as indicated by electroretinogram. However, some rod involvement may be present in some cone dystrophies, particularly at late stage. Affected individuals suffer from photophobia, loss of visual acuity, color vision and central visual field. Another sign is the absence of macular lesions for many years. Cone dystrophies are distinguished from the cone-rod dystrophies in which some loss of peripheral vision also occurs. [ECO:0000269	PubMed:19615668). Note=The disease is caused by mutations affecting the gene represented in this entry..	EDTA Blood Sample

Amniotic Fluid / CVS / Heparinized and EDTA (BOTH) Fetal Blood and Maternal EDTA Blood Sample
Konjenital Kalp Kusurları, Sendromik Olmayan, 1, X'e Bağlı, 306955, X'e Bağlı Resesif (Heterotaksi) (ZIC3 geni) (Tüm Gen Dizi Analizi) (Postnatal)	Congenital heart defects, nonsyndromic, 1, X-linked, 306955, X-linked recessive (Heterotaxia) (ZIC3 gene) (Sequence Analysis-All Coding Exons) (Postnatal)	ZIC3	ZIC3, HTX1, HTX, VACTERLX	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	DISEASE: Heterotaxy, visceral, 1, X-linked (HTX1) [MIM:306955]: A form of visceral heterotaxy, a complex disorder due to disruption of the normal left-right asymmetry of the thoracoabdominal organs. Visceral heterotaxy or situs ambiguus results in randomization of the placement of visceral organs, including the heart, lungs, liver, spleen, and stomach. The organs are oriented randomly with respect to the left-right axis and with respect to one another. It can been associated with variety of congenital defects including cardiac malformations. {ECO:0000269|PubMed:14681828, ECO:0000269|PubMed:17295247, ECO:0000269|PubMed:24123890, ECO:0000269|PubMed:9354794}. Note=The disease is caused by mutations affecting the gene represented in this entry.	EDTA Blood Sample
