Muir-Torre Sendromu, 158320, Otozomal Dominant (Muir-Torre Sendromu) (MSH2 geni) (Tüm Gen Dizi Analizi) (Postnatal)	Muir-Torre syndrome, 158320, Autosomal dominant (Muir-Torre syndrome) (MSH2 gene) (Sequence Analysis-All Coding Exons) (Postnatal)	MSH2	MSH2, COCA1, FCC1, HNPCC1	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		20	60	.	.	30	Postnatal	DISEASE: Hereditary non-polyposis colorectal cancer 1 (HNPCC1) [MIM:120435]: An autosomal dominant disease associated with marked increase in cancer susceptibility. It is characterized by a familial predisposition to early-onset colorectal carcinoma (CRC) and extra-colonic tumors of the gastrointestinal, urological and female reproductive tracts. HNPCC is reported to be the most common form of inherited colorectal cancer in the Western world. Clinically, HNPCC is often divided into two subgroups. Type I is characterized by hereditary predisposition to colorectal cancer, a young age of onset, and carcinoma observed in the proximal colon. Type II is characterized by increased risk for cancers in certain tissues such as the uterus, ovary, breast, stomach, small intestine, skin, and larynx in addition to the colon. Diagnosis of classical HNPCC is based on the Amsterdam criteria: 3 or more relatives affected by colorectal cancer, one a first degree relative of the other two; 2 or more generation affected; 1 or more colorectal cancers presenting before 50 years of age; exclusion of hereditary polyposis syndromes. The term 'suspected HNPCC' or 'incomplete HNPCC' can be used to describe families who do not or only partially fulfill the Amsterdam criteria, but in whom a genetic basis for colon cancer is strongly suspected. (ECO:0000269|PubMed:10375096, ECO:0000269|PubMed:10386556, ECO:0000269|PubMed:10528862, ECO:0000269|PubMed:10573010, ECO:0000269|PubMed:10612836, ECO:0000269|PubMed:10777691, ECO:0000269|PubMed:10829038, ECO:0000269|PubMed:11726306, ECO:0000269|PubMed:11870161, ECO:0000269|PubMed:11920458,	EDTA Blood Sample

Multipl Pterjium Sendromu, Letal Tip, 253290, Otozomal Resesif; LMPS (Letal Multipl Pterjium Sendromu) (CHRNA1 geni) (Tüm Gen Dizi Analizi) (Postnatal)	Multiple pterygium syndrome, lethal type, 253290, Autosomal recessive; LMPS (Lethal multiple pterygium syndrome) (CHRNA1 gene) (Sequence Analysis-All Coding Exons) (Postnatal)	CHRNA1	CHRNA1, ACHRD, CMS1B, CMS1A	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	DISEASE: Myasthenic syndrome, congenital, 1A, slow-channel (CMS1A) [MIM:601462]: A common congenital myasthenic syndrome. Congenital myasthenic syndromes are characterized by muscle weakness affecting the axial and limb muscles (with hypotonia in early- onset forms), the ocular muscles (leading to ptosis and ophthalmoplegia), and the facial and bulbar musculature (affecting sucking and swallowing, and leading to dysphonia). The symptoms fluctuate and worsen with physical effort. CMS1A is a slow-channel myasthenic syndrome. It is caused by kinetic abnormalities of the AChR, resulting in prolonged AChR channel opening episodes, prolonged endplate currents, and depolarization block. This is associated with calcium overload, which may contribute to subsequent degeneration of the endplate and postsynaptic membrane. {ECO:0000269|PubMed:16685696, ECO:0000269|PubMed:7619526, ECO:0000269|PubMed:8872460, ECO:0000269|PubMed:9158151, ECO:0000269|PubMed:9221765}. Muscle from patients shows a complete loss of delta-sarcoglycan as well as of the others components of the sarcoglycan complex. (ECO:0000269	PubMed:9832045). Note=The disease is caused by mutations affecting the gene represented in this entry.	EDTA Blood Sample
Müsküler Distrofi, Limb-Girdle, Tip 2G, 601954, Otozomal Resesif; LGMD2G (Otozomal Resesif Limb-Girdle Tipi Müsküler Distrofi Tip 2G) (TCAP geni) (Tüm Gen Dizi Analizi) (Postnatal)	Muscular dystrophy, limb-girdle, type 2G, 601954, Autosomal recessive; LGMD2G (Autosomal recessive limb-girdle muscular dystrophy type 2G) (TCAP gene) (Sequence Analysis-All Coding Exons) (Postnatal)	TCAP	TCAP, LGMD2G, CMH2S	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	DISEASE: Limb-girdle muscular dystrophy 2G (LGMD2G) [MIM:601954]: An autosomal recessive degenerative myopathy characterized by proximal and distal muscle weakness and atrophy in the limbs, dystrophic changes on muscle biopsy, and absence of telethonin. Cardiac muscle is involved in a subset of patients. (ECO:0000269	PubMed:10655062). Note=The disease is caused by mutations affecting the gene represented in this entry.;	EDTA Blood Sample
Müsküler Distrofi, Limb-Girdle, Tip 2H, 254110, Otozomal Resesif; LGMD2H (Limb-Girdle Tipi Müsküler Distrofi, Tip 2H, Otozomal Resesif) (TRIM32 geni) (Tüm Gen Dizi Analizi) (Postnatal)	Muscular dystrophy, limb-girdle, type 2H, 254110, Autosomal recessive; LGMD2H (Autosomal recessive limb-girdle muscular dystrophy type 2H) (TRIM32 gene) (Sequence Analysis-All Coding Exons) (Postnatal)	TRIM32	TRIM32, HT2A, LGMD2H, BBS11	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	DISEASE: Limb-girdle muscular dystrophy 2H (LGMD2H) [MIM:254110]: An autosomal recessive degenerative myopathy characterized by pelvic girdle, shoulder girdle and quadriceps muscle weakness. Clinical phenotype and severity are highly variable. Disease progression is slow and most patients remain ambulatory into the sixth decade of life. . (ECO:0000269|PubMed:11822024, ECO:0000269|PubMed:17994549). Note=The disease is caused by mutations affecting the gene represented in this entry.	EDTA Blood Sample
Müsküler Distrofi, Limb-Girdle, Otozomal Resesif Tip 2J, 608807; LGMD2J (Limb-Girdle Tipi Müsküler Distrofi, Tip 2J, Otozomal Resesif) (TTN geni) (Tüm Gen Dizi Analizi) (Postnatal)	Muscular dystrophy, limb-girdle, type 2J, 608807, Autosomal recessive; LGMD2J (Autosomal recessive limb-girdle muscular dystrophy type 2J) (TTN gene) (Sequence Analysis-All Coding Exons) (Postnatal)	TTN	TTN, CMD1G, TMD, LGMD2J, MPRM, HMERF, EOMFC	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	DISEASE: Tardive tibial muscular dystrophy (TMD) [MIM:600334]: Autosomal dominant, late-onset distal myopathy. Muscle weakness and atrophy are usually confined to the anterior compartment of the lower leg, in particular the tibialis anterior muscle. Clinical symptoms usually occur at age 35-45 years or much later. (ECO:0000269|PubMed:12145747, ECO:0000269|PubMed:12891679). Note=The disease is caused by mutations affecting the gene represented in this entry.	EDTA Blood Sample

Müsküler Distrofi, Limb-Girdle, Tip 2 L, 611307, Otozomal Resesif; LGMD2L (Otozomal Resesif Limb-Girdle Müsküler Distrofi Tip 2L) (ANO5 geni) (Tüm Gen Dizi Analizi) (Postnatal)	Muscular dystrophy, limb-girdle, type 2L, 611307, Autosomal recessive; LGMD2L (Autosomal recessive limb-girdle muscular dystrophy type 2L) (ANO5 gene) (Sequence Analysis-All Coding Exons) (Postnatal)	ANO5	ANO5, TMEM16E, GDD1, LGMD2L	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	DISEASE: Limb-girdle muscular dystrophy 2L (LGMD2L) [MIM:611307]: An autosomal recessive degenerative myopathy characterized by proximal weakness, weakness of the hip and shoulder girdles and prominent asymmetrical quadriceps femoris and biceps brachii atrophy. {ECO:0000269	PubMed:20096397}. Note=The disease is caused by mutations affecting the gene represented in this entry.	EDTA Blood Sample
Müsküler Distrofi, Limb-Girdle, Tip 2Q, 613723, Otozomal Resesif; LGMD2Q (Otozomal Resesif Limb-Girdle Müsküler Distrofi Tip 2Q) (PLEC geni) (Tüm Gen Dizi Analizi) (Postnatal)	Muscular dystrophy, limb-girdle, type 2Q, 613723, Autosomal recessive; LGMD2Q (Autosomal recessive limb-girdle muscular dystrophy type 2Q) (PLEC gene) (Sequence Analysis-All Coding Exons) (Postnatal)	PLEC	PLEC1, PLEC, PLTN, EBS1, LGMD2Q, EBSOG, EBSPA, EBSMD, EBSND	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	DISEASE: Epidermolysis bullosa simplex, Ogna type (O-EBS) [MIM:131950]: A form of intraepidermal epidermolysis bullosa characterized by generalized skin bruising, skin fragility with non-scarring blistering and small hemorrhagic blisters on hands. At the ultrastructural level, it is differentiated from classical cases of K-EBS, WC-EBS and DM-EBS, by the occurrence of blisters originating in basal cells above hemidesmosomes, and abnormal hemidesmosome intracellular attachment plates. {ECO:0000269	PubMed:11851880}. Note=The disease is caused by mutations affecting the gene represented in this entry.	EDTA Blood Sample
Müsküler Distrofi, Limb-Girdle, Tip 2R, 615325, Otozomal Resesif; LGMD2R (Otozomal Resesif Limb-Girdle Müsküler Distrofi Tip 2R) (DES geni) (Tüm Gen Dizi Analizi) (Postnatal)	Muscular dystrophy, limb-girdle, type 2R, 615325, Autosomal recessive; LGMD2R (Autosomal recessive limb-girdle muscular dystrophy type 2R) (DES gene) (Sequence Analysis-All Coding Exons) (Postnatal)	DES	DES, CMD1I, MFM1, SCPNK, ARVD7, ARVC7, LGMD2R	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	DISEASE: Neurogenic scapuloperoneal syndrome Kaeser type (Kaeser syndrome) [MIM:181400]: Autosomal dominant disorder with a peculiar scapuloperoneal distribution of weakness and atrophy. A large clinical variability is observed ranging from scapuloperoneal, limb grindle and distal phenotypes with variable cardiac or respiratory involvement. Facial weakness, dysphagia and gynaecomastia are frequent additional symptoms. Affected men seemingly bear a higher risk of sudden, cardiac death as compared to affected women. Histological and immunohistochemical examination of muscle biopsy specimens reveal a wide spectrum of findings ranging from near normal or unspecific pathology to typical, myofibrillar changes with accumulation of desmin. {ECO:0000269|PubMed:17439987, ECO:0000269|PubMed:25394388}. Note=The disease is caused by mutations affecting the gene represented in this entry.	EDTA Blood Sample
Müsküler Distrofi, Limb-Girdle, Tip 2S, 615356, Otozomal Resesif; LGMD2S (Otozomal Resesif Limb-Girdle Müsküler Distrofi Tip 2S) (TRAPPC11 geni) (Tüm Gen Dizi Analizi) (Postnatal)	Muscular dystrophy, limb-girdle, type 2S, 615356, Autosomal recessive; LGMD2S (Autosomal recessive limb-girdle muscular dystrophy type 2S) (TRAPPC11 gene) (Sequence Analysis-All Coding Exons) (Postnatal)	TRAPPC11	TRAPPC11, C4orf41, LGMD2S	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	DISEASE: Limb-girdle muscular dystrophy 2S (LGMD2S) [MIM:615356]: A form of limb-girdle muscular dystrophy characterized by proximal muscle weakness with childhood onset, resulting in gait abnormalities and scapular winging. Serum creatine kinase is increased. A subset of patients may show a hyperkinetic movement disorder with chorea, ataxia, or dystonia and global developmental delay. {ECO:0000269	PubMed:23830518}. Note=The disease is caused by mutations affecting the gene represented in this entry.;	EDTA Blood Sample
Müsküler Distrofi, Limb-Girdle,Tip 2W, 616827, Otozomal Resesif; LGMD2W (Otozomal Resesif Limb-Girdle Müsküler Distrofi Tip 2W) (LIMS2 geni) (Tüm Gen Dizi Analizi) (Postnatal)	Muscular dystrophy, limb-girdle, type 2W, 616827, Autosomal recessive; LGMD2W (Autosomal recessive limb-girdle muscular dystrophy type 2W) (LIMS2 gene) (Sequence Analysis-All Coding Exons) (Postnatal)	LIMS2	LIMS2, PINCH2, LGMD2W	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	.	EDTA Blood Sample
Müsküler Distrofi, Limb-Girdle, Tip 2X, 616812, Otozomal Resesif; LGMD2X (Otozomal Resesif Limb-Girdle Müsküler Distrofi Tip 2X) (BVES geni) (Tüm Gen Dizi Analizi) (Postnatal)	Muscular dystrophy, limb-girdle, type 2X, 616812, Autosomal recessive; LGMD2X (Autosomal recessive limb-girdle muscular dystrophy type 2X) (BVES gene) (Sequence Analysis-All Coding Exons) (Postnatal)	BVES	BVES, HBVES, POPDC1, LGMD2X	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	.	EDTA Blood Sample
Müsküler Distrofi, Limb-Girdle, Tip 2Y, 617072, Otozomal Resesif; LGMD2Y (Otozomal Resesif Limb-Girdle Müsküler Distrofi Tip 2Y) (TOR1AIP1 geni) (Tüm Gen Dizi Analizi) (Postnatal)	Muscular dystrophy, limb-girdle, type 2Y, 617072, Autosomal recessive; LGMD2Y (Muscular dystrophy with progressive weakness, distal contractures and rigid spine) (TOR1AIP1 gene) (Sequence Analysis-All Coding Exons) (Postnatal)	TOR1AIP1	TOR1AIP1, LAP1, LAP1B, LGMD2Y	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal		EDTA Blood Sample
Müsküler Distrofi, Limb-Girdle, Tip 2Z, 617232, Otozomal Resesif; LGMD2Z (Dowling-Degos Hastalığı) (POGLUT1 geni) (Tüm Gen Dizi Analizi) (Postnatal)	Muscular dystrophy, limb-girdle, type 2Z, 617232, Autosomal recessive; LGMD2Z (Dowling-Degos disease) (POGLUT1 gene) (Sequence Analysis-All Coding Exons) (Postnatal)	POGLUT1	POGLUT1, CLP46, KTELC1, RUMI, C3orf9, DDD4, LGMD2Z	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	.	EDTA Blood Sample
Müsküler Distrofi, Limb-Girdle, Tip 1C, 607801, Otozomal Resesif, Otozomal Dominant (Otozomal Dominant Limb-Girdle Müsküler Distrofi Tip 1C) (CAV3 geni) (Tüm Gen Dizi Analizi) (Postnatal)	Muscular dystrophy, limb-girdle, type IC, 607801, Autosomal recessive, Autosomal dominant (Autosomal dominant limb-girdle muscular dystrophy type 1C) (CAV3 gene) (Sequence Analysis-All Coding Exons) (Postnatal)	CAV3	CAV3, LGMD1C, LQT9	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	DISEASE: HyperCKmia (HYPCK) [MIM:123320]: Characterized by persistent elevated levels of serum creatine kinase without muscle weakness. {ECO:0000269|PubMed:10746614, ECO:0000269|PubMed:12082049, ECO:0000269|PubMed:14663034, ECO:0000269|PubMed:15099591, ECO:0000269|PubMed:15580566}. Distal hereditary motor neuronopathies constitute a heterogeneous group of neuromuscular disorders caused by selective degeneration of motor neurons in the anterior horn of the spinal cord, without sensory deficit in the posterior horn. The overall clinical picture consists of a classical distal muscular atrophy syndrome in the legs without clinical sensory loss. The disease starts with weakness and wasting of distal muscles of the anterior tibial and peroneal compartments of the legs. Later on, weakness and atrophy may expand to the proximal muscles of the lower limbs and/or to the distal upper limbs. HMN7A is characterized by onset in the second decade of progressive distal muscle wasting and weakness affecting the upper and lower limbs and resulting in walking difficulties and hand grip. There is significant muscle atrophy of the hands and lower limbs. The disorder is associated with vocal cord paresis due to involvement of the tenth cranial nerve. {ECO:0000269|PubMed:23141292}. Note=The disease is caused by mutations affecting the gene represented in this entry.;	EDTA Blood Sample

The overall clinical picture consists of a classical distal muscular atrophy syndrome in the legs without clinical sensory loss. The disease starts with weakness and wasting of distal muscles of the anterior tibial and peroneal compartments of the legs. Later on, weakness and atrophy may expand to the proximal muscles of the lower limbs and/or to the distal upper limbs. HMN7A is characterized by onset in the second decade of progressive distal muscle wasting and weakness affecting the upper and lower limbs and resulting in walking difficulties and hand grip. There is significant muscle atrophy of the hands and lower limbs. The disorder is associated with vocal cord paresis due to involvement of the tenth cranial nerve. {ECO:0000269	PubMed:23141292}. Note=The disease is caused by mutations affecting the gene represented in this entry.	Amniotic Fluid / CVS / Heparinized and EDTA (BOTH) Fetal Blood and Maternal EDTA Blood Sample

Clinical features are easy fatigability and muscle weakness affecting the axial and limb muscles (with hypotonia in early-onset forms), the ocular muscles (leading to ptosis and ophthalmoplegia), and the facial and bulbar musculature (affecting sucking and swallowing, and leading to dysphonia). The symptoms fluctuate and worsen with physical effort. CMS2A is a slow-channel myasthenic syndrome. It is caused by kinetic abnormalities of the AChR, resulting in prolonged AChR channel opening episodes, prolonged endplate currents, and depolarization block. This is associated with calcium overload, which may contribute to subsequent degeneration of the endplate and postsynaptic membrane. {ECO:0000269|PubMed:8651643, ECO:0000269|PubMed:8872460}. Miyastenik Sendrom, Konjenital, 4C, Asetilkolin Reseptörü Eksikliği İle İlişkili, 608931, Otozomal Resesif; CMS4C (Konjenital Miyastenik Sendrom) (Prenatal) (CHRNE geni) (Tüm Gen Dizi Analizi) (Prenatal)	Myasthenic syndrome, congenital, 4C, associated with acetylcholine receptor deficiency, 608931, Autosomal recessive; CMS4C (Congenital myasthenic syndrome) (CHRNE gene) (Sequence Analysis-All Coding Exons) (Prenatal)	CHRNE	CHRNE, SCCMS, CMS4A, CMS4B, CMS4C	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	Amniyon sıvısı / CVS / Heparinli ve EDTA'lı (İKİSİ BİRDEN) kordon kanı VE ANNEDEN EDTA'LI KAN		.	.	15	30	20	Prenatal	DISEASE: Myasthenic syndrome, congenital, 4A, slow-channel (CMS4A) [MIM:605809]: A form of congenital myasthenic syndrome, a group of disorders characterized by failure of neuromuscular transmission, including pre-synaptic, synaptic, and post-synaptic disorders that are not of autoimmune origin. Clinical features are easy fatigability and muscle weakness affecting the axial and limb muscles (with hypotonia in early-onset forms), the ocular muscles (leading to ptosis and ophthalmoplegia), and the facial and bulbar musculature (affecting sucking and swallowing, and leading to dysphonia). The symptoms fluctuate and worsen with physical effort. CMS4A is a slow-channel myasthenic syndrome. It is caused by kinetic abnormalities of the AChR, resulting in prolonged AChR channel opening episodes, prolonged endplate currents, and depolarization block. This is associated with calcium overload, which may contribute to subsequent degeneration of the endplate and postsynaptic membrane. {ECO:0000269|PubMed:12141316, ECO:0000269|PubMed:7531341, ECO:0000269|PubMed:7538206, ECO:0000269|PubMed:8872460}. Note=The disease is caused by mutations affecting the gene represented in this entry.	Amniotic Fluid / CVS / Heparinized and EDTA (BOTH) Fetal Blood and Maternal EDTA Blood Sample

Miyelofibrozis, Somatik, 254450 (Miyeloid Metaplazi- Miyelofibrozis) (SH2B3 geni) (Tüm Gen Dizi Analizi) (Postnatal)	Myelofibrosis, somatic, 254450 (Myelofibrosis with myeloid metaplasia) (SH2B3 gene) (Sequence Analysis-All Coding Exons) (Postnatal)	SH2B3	SH2B3, LNK	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)/ EDTA'lı Kemik İliği (2-3 ml)		30	120	.	.	60	Postnatal	.	EDTA blood sample / EDTA bone marrow
Miyelofibrozis, Somatik, 254450 (Miyeloid Metaplazi- Miyelofibrozis) V617F Mutasyonu ve (Ekzon 12-14) (JAK2 geni) (Dizi Analizi) (Postnatal)	Myelofibrosis, somatic, 254450 (Myelofibrosis with myeloid metaplasia) V617F Mutation and (Exon 12-14) (JAK2 gene) (Dizi Analizi) (Postnatal)	JAK2	JAK2, THCYT3	Dizi Analizi/ Sequence Analysis	EDTA'lı Kan (2-4 ml)/ EDTA'lı Kemik İliği (2-3 ml)		30	120	.	.	60	Postnatal	DISEASE: Myelofibrosis (MYELOF) [MIM:254450]: A disorder characterized by replacement of the bone marrow by fibrous tissue, occurring in association with a myeloproliferative disorder. Clinical manifestations may include anemia, pallor, splenomegaly, hypermetabolic state, petechiae, ecchymosis, bleeding, lymphadenopathy, hepatomegaly, portal hypertension. Note=The disease is caused by mutations affecting the gene represented in this entry.	EDTA blood sample / EDTA bone marrow
Miyelofibrozis, Somatik, 254450 (Miyeloid Metaplazi- Miyelofibrozis) (CALR geni) (Tüm Gen Dizi Analizi) (Postnatal)	Myelofibrosis, somatic, 254450 (Myelofibrosis with myeloid metaplasia) (CALR gene) (Sequence Analysis-All Coding Exons) (Postnatal)	CALR	CALR, SSA	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)/ EDTA'lı Kemik İliği (2-3 ml)		30	120	.	.	60	Postnatal	.	EDTA blood sample / EDTA bone marrow
Miyeloid Lösemi, Akut (IRF1 geni) (Tüm Gen Dizi Analizi) (Postnatal)	Myelogenous leukemia, acute (IRF1 gene) (Sequence Analysis-All Coding Exons) (Postnatal)	IRF1	IRF1, MAR	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	DISEASE: Gastric cancer (GASC) [MIM:613659]: A malignant disease which starts in the stomach, can spread to the esophagus or the small intestine, and can extend through the stomach wall to nearby lymph nodes and organs. It also can metastasize to other parts of the body. The term gastric cancer or gastric carcinoma refers to adenocarcinoma of the stomach that accounts for most of all gastric malignant tumors. Two main histologic types are recognized, diffuse type and intestinal type carcinomas. Diffuse tumors are poorly differentiated infiltrating lesions, resulting in thickening of the stomach. In contrast, intestinal tumors are usually exophytic, often ulcerating, and associated with intestinal metaplasia of the stomach, most often observed in sporadic disease. {ECO:0000269|PubMed:10395927, ECO:0000269|PubMed:9679752}. Note=Disease susceptibility is associated with variations affecting the gene represented in this entry.;	EDTA Blood Sample
Miyeloid Lösemi, Akut (ACSL6 geni) (Tüm Gen Dizi Analizi) (Postnatal)	Myelogenous leukemia, acute (ACSL6 gene) (Sequence Analysis-All Coding Exons) (Postnatal)	ACSL6	ACSL6, FACL6, ACS2	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	DISEASE: Note=A chromosomal aberration involving ACSL6 may be a cause of myelodysplastic syndrome with basophilia. Translocation t(5;12)(q31;p13) with ETV6. {ECO:0000269|PubMed:10903516}.	EDTA Blood Sample
Miyeloid Lösemi, Akut, M4 / M4Eo Alt Tipi Somatik, 601626 (Sınıflandırılmamış Akut Miyeloid Lösemi) (CBFB geni) (Tüm Gen Dizi Analizi) (Postnatal)	Myeloid leukemia, acute, M4/M4Eo subtype, somatic, 601626 (Unclassified acute myeloid leukemia) (CBFB gene) (Sequence Analysis-All Coding Exons) (Postnatal)	CBFB	CBFB, PEBP2B	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)/ EDTA'lı Kemik İliği (2-3 ml)		30	120	.	.	60	Postnatal	DISEASE: Note=A chromosomal aberration involving CBFB is associated with acute myeloid leukemia of M4EO subtype. Pericentric inversion inv(16)(p13.q22). The inversion produces a fusion protein that consists of the 165 N-terminal residues of CBF-beta (PEPB2) with the tail region of MYH11. {ECO:0000269|PubMed:8351518}.	EDTA blood sample / EDTA bone marrow
Miyelokatekxis, İzole (CXCR4 geni) (Tüm Gen Dizi Analizi) (Postnatal)	Myelokathexis, isolated (CXCR4 gene) (Sequence Analysis-All Coding Exons) (Postnatal)	CXCR4	CXCR4, D2S201E, NPY3R, WHIMS	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	DISEASE: WHIM syndrome (WHIMS) [MIM:193670]: Immunodeficiency disease characterized by neutropenia, hypogammaglobulinemia and extensive human papillomavirus (HPV) infection. Despite the peripheral neutropenia, bone marrow aspirates from affected individuals contain abundant mature myeloid cells, a condition termed myelokathexis. {ECO:0000269|PubMed:12692554}. Note=The disease is caused by mutations affecting the gene represented in this entry.;	EDTA Blood Sample
Miyeloperoksidaz Eksikliği, 254600, Otozomal Resesif; MPOD (Miyeloperoksidaz Eksikliği) (MPO geni) (Tüm Gen Dizi Analizi) (Postnatal)	Myeloperoxidase deficiency, 254600, Autosomal recessive; MPOD (Myeloperoxidase deficiency) (MPO gene) (Sequence Analysis-All Coding Exons) (Postnatal)	MPO	MPO	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	DISEASE: Myeloperoxidase deficiency (MPOD) [MIM:254600]: A disorder characterized by decreased myeloperoxidase activity in neutrophils and monocytes that results in disseminated candidiasis. {ECO:0000269|PubMed:7904599, ECO:0000269|PubMed:8142659, ECO:0000269|PubMed:9354683, ECO:0000269|PubMed:9637725}. Note=The disease is caused by mutations affecting the gene represented in this entry.;	EDTA Blood Sample
Miyeloproliferatif Bozukluk-Eozinofili, 131440, Otozomal Dominant (Sınıflandırılmamış Kronik Miyeloproliferatif Hastalık) (PDGFRB geni) (Tüm Gen Dizi Analizi) (Postnatal)	Myeloproliferative disorder with eosinophilia, 131440, Autosomal dominant (Unclassified chronic myeloproliferative disease) (PDGFRB gene) (Sequence Analysis-All Coding Exons) (Postnatal)	PDGFRB	PDGFRB, PDGFR, IBGC4, IMF1, PENTT, KOGS	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	DISEASE: Myeloproliferative disorder chronic with eosinophilia (MPE) [MIM:131440]: A hematologic disorder characterized by malignant eosinophils proliferation. Note=The gene represented in this entry may be involved in disease pathogenesis. Chromosomal aberrations involving PDGFRB have been found in many instances of chronic myeloproliferative disorder with eosinophilia. Translocation t(5;12) with ETV6 on chromosome 12 creating an PDGFRB-ETV6 fusion protein (PubMed:12181402). Translocation t(5;15)(q33;q22) with TPS3BP1 creating a PDGFRB-TPS3BP1 fusion protein (PubMed:15492236). Translocation t(1;5)(q23;q33) that forms a PDE4DIP-PDGFRB fusion protein (PubMed:12907457). Translocation t(5;9)(q33-34;q23) with CEP85L that fuses the 5'-end of CEP85L (isoform 4) to the 3'-end of PDGFRB (PubMed:21938754). {ECO:0000269|PubMed:12181402, ECO:0000269|PubMed:12907457, ECO:0000269|PubMed:15492236, ECO:0000269|PubMed:21938754}.	EDTA Blood Sample
Miyeloproliferatif Hastalık, 605392 (FGFR1OP geni) (Tüm Gen Dizi Analizi) (Postnatal)	Myeloproliferative disorder, 605392 (FGFR1OP gene) (Sequence Analysis-All Coding Exons) (Postnatal)	FGFR1OP	FGFR1OP, FOP	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal		EDTA Blood Sample
(Miyeloproliferatif Neoplaziler, Ailesel, Yatkınlık), 616604, Otozomal Dominant (2200)	Myeloproliferative neoplasms, familial, susceptibility to, 616604, Autosomal dominant (440)	.	DUP14q32, C14DUPq32	Array-CGH	EDTA'lı Kan (2-4 ml) ve Heparinli Kan (2-4 ml)		20	120	.	.	60	Postnatal	.	EDTA Blood Sample and Heparinized blood sample
Miyeloproliferatif / Lenfoproliferatif Neoplazmalar, Ailesel (Çok Tip), Yatkınlık, 616871, Otozomal Dominant; MPLPF (DDX41 geni) (Tüm Gen Dizi Analizi) (Postnatal)	Myeloproliferative/lymphoproliferative neoplasms, familial (multiple types), susceptibility to, 616871, Autosomal dominant; MPLPF (DDX41 gene) (Sequence Analysis-All Coding Exons) (Postnatal)	DDX41	DDX41, ABS, MPLPF	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal		EDTA Blood Sample
Myhre Sendromu, 139210, Otozomal Dominant (Myhre Sendromu) (SMAD4 geni) (Tüm Gen Dizi Analizi) (Postnatal)	Myhre syndrome, 139210, Autosomal dominant (Myhre syndrome) (SMAD4 gene) (Sequence Analysis-All Coding Exons) (Postnatal)	SMAD4	SMAD4, MADH4, DPC4, SMAD4, JIP, MYHRS	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	DISEASE: Colorectal cancer (CRC) [MIM:114500]: A complex disease characterized by malignant lesions arising from the inner wall of the large intestine (the colon) and the rectum. Genetic alterations are often associated with progression from premalignant lesion (adenoma) to invasive adenocarcinoma. Risk factors for cancer of the colon and rectum include colon polyps, long-standing ulcerative colitis, and genetic family history. {ECO:0000269|PubMed:16959974}. Note=The disease may be caused by mutations affecting the gene represented in this entry.	EDTA Blood Sample
Myhre Sendromu, 139210, Otozomal Dominant (Myhre Sendromu) (MLPA)	Myhre syndrome, 139210, Autosomal dominant (Myhre syndrome) (MLPA)	SMAD4	SMAD4, MADH4, DPC4, SMAD4, JIP, MYHRS	MLPA (CNV)	EDTA'lı Kan (2-4 ml)		20	60	.	.	30	Postnatal	DISEASE: Colorectal cancer (CRC) [MIM:114500]: A complex disease characterized by malignant lesions arising from the inner wall of the large intestine (the colon) and the rectum. Genetic alterations are often associated with progression from premalignant lesion (adenoma) to invasive adenocarcinoma. Risk factors for cancer of the colon and rectum include colon polyps, long-standing ulcerative colitis, and genetic family history. {ECO:0000269|PubMed:16959974}. Miyokard Enfarktüsü, Yatkınlık (ACE geni) (Tüm Gen Dizi Analizi) (Postnatal)	Myocardial infarction, susceptibility to (ACE gene) (Sequence Analysis-All Coding Exons) (Postnatal)	ACE	ACE, DCP1, ACE1, MVCD3, ICH	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	DISEASE: Renal tubular dysgenesis (RTD) [MIM:267430]: Autosomal recessive severe disorder of renal tubular development characterized by persistent fetal anuria and perinatal death, probably due to pulmonary hypoplasia from early-onset oligohydramnios (the Potter phenotype). {ECO:0000269|PubMed:16116425}. Note=The disease is caused by mutations affecting the gene represented in this entry.	EDTA Blood Sample
Miyokard Enfarktüsü, Yatkınlık, 608446 (GCLC geni) (Tüm Gen Dizi Analizi) (Postnatal)	Myocardial infarction, susceptibility to, 608446 (GCLC gene) (Sequence Analysis-All Coding Exons) (Postnatal)	GCLC	GCLC, GLCLC	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	DISEASE: Hemolytic anemia due to gamma-glutamylcysteine synthetase deficiency (HAGGSD) [MIM:230450]: A disease characterized by hemolytic anemia, glutathione deficiency, myopathy, late-onset spinocerebellar degeneration, and peripheral neuropathy. {ECO:0000269|PubMed:10515893, ECO:0000269|PubMed:10733484, ECO:0000269|PubMed:12663448}. Note=The disease is caused by mutations affecting the gene represented in this entry.;	EDTA Blood Sample
Miyokard Enfarktüsü, Yatkınlık, 608446 (TNFSF4 geni) (Tüm Gen Dizi Analizi) (Postnatal)	Myocardial infarction, susceptibility to, 608446 (TNFSF4 gene) (Sequence Analysis-All Coding Exons) (Postnatal)	TNFSF4	TNFSF4, GP34, OX40L	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	DISEASE: Systemic lupus erythematosus (SLE) [MIM:152700]: A chronic, relapsing, inflammatory, and often febrile multisystemic disorder of connective tissue, characterized principally by involvement of the skin, joints, kidneys and serosal membranes. It is of unknown etiology, but is thought to represent a failure of the regulatory mechanisms of the autoimmune system. The disease is marked by a wide range of system dysfunctions, an elevated erythrocyte sedimentation rate, and the formation of LE cells in the blood or bone marrow. {ECO:0000269|PubMed:18059267}. Note=Disease susceptibility is associated with variations affecting the gene represented in this entry. The upstream region of TNFSF4 contains a single risk haplotype for SLE, which is correlated with increased expression of both cell-surface TNFSF4 and TNFSF4 transcripts. Increased levels of TNFSF4 are thought to augment T-cell-APC interaction and the functional consequences of T-cell activation, thereby destabilizing peripheral tolerance.;	EDTA Blood Sample
Miyokard Enfarktüsü, Yatkınlık, 608446 (OLR1 geni) (Tüm Gen Dizi Analizi) (Postnatal)	Myocardial infarction, susceptibility to, 608446 (OLR1 gene) (Sequence Analysis-All Coding Exons) (Postnatal)	OLR1	OLR1, LOX1	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	DISEASE: Note=Independent association genetic studies have implicated OLR1 gene variants in myocardial infarction susceptibility.	EDTA Blood Sample
Miyokard Enfarktüsü, Yatkınlık, 608446 (MIAT geni) (Tüm Gen Dizi Analizi) (Postnatal)	Myocardial infarction, susceptibility to, 608446 (MIAT gene) (Sequence Analysis-All Coding Exons) (Postnatal)	MIAT	MIAT, C22orf35	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal		EDTA Blood Sample
Miyokard Enfarktüsü, Yatkınlık, 608446 (LTA geni) (Tüm Gen Dizi Analizi) (Postnatal)	Myocardial infarction, susceptibility to, 608446 (LTA gene) (Sequence Analysis-All Coding Exons) (Postnatal)	LTA	LTA, TNFB	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	DISEASE: Psoriatic arthritis (PSORAS) [MIM:607507]: An inflammatory, seronegative arthritis associated with psoriasis. It is a heterogeneous disorder ranging from a mild, non-destructive disease to a severe, progressive, erosive arthropathy. Five types of psoriatic arthritis have been defined: asymmetrical oligoarthritis characterized by primary involvement of the small joints of the fingers or toes; asymmetrical arthritis which involves the joints of the extremities; symmetrical polyarthritis characterized by a rheumatoid like pattern that can involve hands, wrists, ankles, and feet;arthritis mutilans, which is a rare but deforming and destructive condition; arthritis of the sacroiliac joints and spine (psoriatic spondylitis). {ECO:0000269|PubMed:12746914}. Note=Disease susceptibility is associated with variations affecting the gene represented in this entry.;	EDTA Blood Sample
Miyokard Enfarktüsü, Yatkınlık, 608446 (LRP8 geni) (Tüm Gen Dizi Analizi) (Postnatal)	Myocardial infarction, susceptibility to, 608446 (LRP8 gene) (Sequence Analysis-All Coding Exons) (Postnatal)	LRP8	LRP8, APOER2, MCI1	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	DISEASE: Myocardial infarction 1 (MCI1) [MIM:608446]: A condition defined by the irreversible necrosis of heart muscle secondary to prolonged ischemia. {ECO:0000269|PubMed:17847002}. Note=The disease is caused by mutations affecting the gene represented in this entry.;	EDTA Blood Sample
Miyokard Enfarktüsü, Yatkınlık, 608446 (LGALS2 geni) (Tüm Gen Dizi Analizi) (Postnatal)	Myocardial infarction, susceptibility to, 608446 (LGALS2 gene) (Sequence Analysis-All Coding Exons) (Postnatal)	LGALS2	LGALS2	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	.	EDTA Blood Sample
Miyokard Enfarktüsü, Yatkınlık, 608446 (GCLM geni) (Tüm Gen Dizi Analizi) (Postnatal)	Myocardial infarction, susceptibility to, 608446 (GCLM gene) (Sequence Analysis-All Coding Exons) (Postnatal)	GCLM	GCLM, GLCLR	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	.	EDTA Blood Sample
Miyokard Enfarktüsü, Yatkınlık, 608446 (ESR1 geni) (Tüm Gen Dizi Analizi) (Postnatal)	Myocardial infarction, susceptibility to, 608446 (ESR1 gene) (Sequence Analysis-All Coding Exons) (Postnatal)	ESR1	ESR1, ESR, ESTRR	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	DISEASE: Estrogen resistance (ESTRR) [MIM:615363]: A disorder characterized by partial or complete resistance to estrogens, in the presence of elevated estrogen serum levels. Clinical features include absence of the pubertal growth spurt, delayed bone maturation, unfused epiphyses, reduced bone mineral density, osteoporosis, continued growth into adulthood and very tall adult stature. Glucose intolerance, hyperinsulinemia and lipid abnormalities may also be present. {ECO:0000269|PubMed:23841731, ECO:0000269|PubMed:8961262}. Note=The disease is caused by mutations affecting the gene represented in this entry.;	EDTA Blood Sample
Miyokard Enfarktüsü, Yatkınlık, 608446 (Glanzmann Trombastenisi) (ITGB3 geni) (Tüm Gen Dizi Analizi) (Postnatal)	Myocardial infarction, susceptibility to, 608446 (Glanzmann thrombasthenia) (ITGB3 gene) (Sequence Analysis-All Coding Exons) (Postnatal)	ITGB3	ITGB3, GP3A, GT, BDPLT2, BDPLT16	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	DISEASE: Bleeding disorder, platelet-type 16 (BDPLT16) [MIM:187800]: An autosomal dominant form of congenital macrothrombocytopenia associated with platelet anisocytosis. It is a disorder of platelet production. Affected individuals may have no or only mildly increased bleeding tendency. In vitro studies show mild platelet functional abnormalities. {ECO:0000269|PubMed:18065693}. Note=The disease is caused by mutations affecting the gene represented in this entry.;	EDTA Blood Sample
Miyoklonik Epilepsi, İnfantil, Alesel, 605021, Otozomal Resesif (Alesel İnfantil Miyoklonik Epilepsi) (TBC1D24 geni) (Tüm Gen Dizi Analizi) (Postnatal)	Myoclonic epilepsy, infantile, familial, 605021, Autosomal recessive (Familial infantile myoclonic epilepsy) (TBC1D24 gene) (Sequence Analysis-All Coding Exons) (Postnatal)	TBC1D24	TBC1D24, KIAA1171, FIME, EIEE16, DOORS, DFNB86, DFNA65	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	DISEASE: Deafness, onychodystrophy, osteodystrophy, mental retardation, and seizures syndrome (DOORS) [MIM:220500]: A syndrome characterized by sensorineural deafness, mental retardation, hypoplastic or absent nails, small or absent distal phalanges of hands and feet. Additional features include coarse facies, a large nose with wide nasal bridge, bulbous tip and anteverted nares, a long prominent philtrum and downturned corners of the mouth. Progressive neurological manifestations include seizures from infancy, optic atrophy, and peripheral polyneuropathy. {ECO:0000269|PubMed:24291220}. Renal failure may occasionally occur. {ECO:0000269	PubMed:18817903}. Note=The disease is caused by mutations affecting the gene represented in this entry.;	EDTA Blood Sample
Miyokimi, 121200, Otozomal Dominant; BFNS1 (Benign Ailesel Neonatal Epilepsi) (KCNQ2 geni) (Tüm Gen Dizi Analizi) (Postnatal)	Myokymia, 121200, Autosomal dominant; BFNS1 (Benign familial neonatal epilepsy) (KCNQ2 gene) (Sequence Analysis-All Coding Exons) (Postnatal)	KCNQ2	KCNQ2, EBN1, EIEE7, BFNS1	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	DISEASE: Seizures, benign familial neonatal 1 (BFNS1) [MIM:121200]: A disorder characterized by clusters of seizures occurring in the first days of life. Most patients have spontaneous remission by 12 months of age and show normal psychomotor development. Some rare cases manifest an atypical severe phenotype associated with epileptic encephalopathy and psychomotor retardation. The disorder is distinguished from benign familial infantile seizures by an earlier age at onset. In some patients, neonatal convulsions are followed later in life by myokymia, a benign condition characterized by spontaneous involuntary contractions of skeletal muscles fiber groups that can be observed as vermiform movement of the overlying skin. Electromyography typically shows continuous motor unit activity with spontaneous oligo- and multiplet-discharges of high intraburst frequency (myokymic discharges). Some patients may have isolated myokymia. {ECO:0000269|PubMed:11175290, ECO:0000269|PubMed:11572947, ECO:0000269|PubMed:14534157, ECO:0000269|PubMed:15249611, ECO:0000269|PubMed:9425895}. Miyopati, Aşırı Otofaji İle, X'e Bağlı Miyopati, 310440, X'e Bağlı Resesif; MEAX (X'e Bağlı Miyopati-Aşırı Otofajili) (VMA21 geni) (Tüm Gen Dizi Analizi) (Postnatal)	Myopathy, X-linked, with excessive autophagy, 310440, X-linked recessive; MEAX (X-linked myopathy with excessive autophagy) (VMA21 gene) (Sequence Analysis-All Coding Exons) (Postnatal)	VMA21	VMA21, XMEA	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	DISEASE: Myopathy, X-linked, with excessive autophagy (MEAX) [MIM:310440]: A muscle disorder characterized by childhood early onset of a slowly progressive proximal limb muscle weakness (especially in legs) and elevation of serum creatine kinase, without evidence of cardiac, respiratory or central nervous system involvement. Histopathological analysis reveals diseased muscle fibers that are not necrotic, but show abnormal autophagic vacuolation as a manifestation of excessive autophagic activity in skeletal muscle cells. {ECO:0000269|PubMed:19379691, ECO:0000269|PubMed:23315026, ECO:0000269|PubMed:24488655, ECO:0000269|PubMed:25683699}. Note=The disease is caused by mutations affecting the gene represented in this entry. VMA21 deficiency results in an increase of lysosomal pH from 4.7 to 5.2, which reduces lysosomal degradative ability and blocks autophagy. This reduces cellular free amino acids, which upregulates the mTOR pathway and mTOR-dependent macroautophagy, resulting in proliferation of large and ineffective autolysosomes that engulf sections of cytoplasm, merge together, and vacuolate the cell. {ECO:0000269|PubMed:23315026}.	EDTA Blood Sample

Myotonik Distrofi 1, 160900, Otozomal Dominant; DM1 (Steinert Myotonik Distrofi) (Tekrar Sayısı-)	Myotonic dystrophy 1, 160900, Autosomal dominant; DM1 (Steinert myotonic dystrophy)(Repeat Analysis)	DMPK	DMPK, DM, DMK	Tekrar sayısı/ Repeat Analysis	EDTA'lı Kan (2-4 ml)	*	20	90	.	.	60	Postnatal	DISEASE: Dystrophia myotonica 1 (DM1) [MIM:160900]: A muscular disorder characterized by myotonia, muscle wasting in the distal extremities, cataract, hypogonadism, defective endocrine functions, male baldness and cardiac arrhythmias. {ECO:0000269|PubMed:1302022, ECO:0000269|PubMed:1310900, ECO:0000269|PubMed:1546326, ECO:0000269|PubMed:19514047}. Note=The disease is caused by mutations affecting the gene represented in this entry. The causative mutation is a CTG expansion in the 3'- UTR of the DMPK gene. A length exceeding 50 CTG repeats is pathogenic, while normal individuals have 5 to 37 repeats. Intermediate alleles with 35-49 triplets are not disease-causing but show instability in intergenerational transmissions. Disease severity varies with the number of repeats: mildly affected persons have 50 to 150 repeats, patients with classic DM have 100 to 1,000 repeats, and those with congenital onset can have more than 2,000 repeats. {ECO:0000269|PubMed:1310900, ECO:0000269|PubMed:19514047}.;	EDTA Blood Sample

Cataplexy is a sudden loss of muscle tone triggered by emotions, which is the most valuable clinical feature used to diagnose narcolepsy. Human narcolepsy is primarily a sporadically occurring disorder but familial clustering has been observed. {ECO:0000269	PubMed:10973318}. Note=The disease is caused by mutations affecting the gene represented in this entry. Human narcolepsy is associated with a deficient orexin system. Orexins are absent and/or greatly diminished in the brain and cerebrospinal fluid (CSF) of most narcoleptic patients.;	EDTA Blood Sample
Narkolepsi 7, 614250, Otozomal Dominant; NRCLP7 (Narkolepsi-Katapleksi) (MOG geni) (Tüm Gen Dizi Analizi) (Postnatal)	Narcolepsy 7, 614250, Autosomal dominant; NRCLP7 (Narcolepsy-cataplexy) (MOG gene) (Sequence Analysis-All Coding Exons) (Postnatal)	MOG	MOG, NRCLP7	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	. Nefronoftizis 13, 614377, Otozomal Resesif; NPHP13 (Nefronoftizis) (WDR19 geni) (Tüm Gen Dizi Analizi) (Postnatal)	Nephronophthisis 13, 614377, Autosomal recessive; NPHP13 (Nephronophthisis) (WDR19 gene) (Sequence Analysis-All Coding Exons) (Postnatal)	WDR19	WDR19, SRTD5, ATD5, NPHP13, CED4	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	DISEASE: Short-rib thoracic dysplasia 5 with or without polydactyly (SRTD5) [MIM:614376]: A form of short-rib thoracic dysplasia, a group of autosomal recessive ciliopathies that are characterized by a constricted thoracic cage, short ribs, shortened tubular bones, and a 'trident' appearance of the acetabular roof. Polydactyly is variably present. Non-skeletal involvement can include cleft lip/palate as well as anomalies of major organs such as the brain, eye, heart, kidneys, liver, pancreas, intestines, and genitalia. Some forms of the disease are lethal in the neonatal period due to respiratory insufficiency secondary to a severely restricted thoracic cage, whereas others are compatible with life. Disease spectrum encompasses Ellis-van Creveld syndrome, asphyxiating thoracic dystrophy (Jeune syndrome), Mainzer-Saldino syndrome, and short rib-polydactyly syndrome. (ECO:0000269	PubMed:22019273). Note=The disease is caused by mutations affecting the gene represented in this entry.	EDTA Blood Sample

Niemann-Pick disease type A is a primarily neurodegenerative disorder characterized by onset within the first year of life, mental retardation, digestive disorders, failure to thrive, major hepatosplenomegaly, and severe neurologic symptoms. The severe neurological disorders and pulmonary infections lead to an early death, often around the age of four. Clinical features are variable. A phenotypic continuum exists between type A (basic neurovisceral) and type B (purely visceral) forms of Niemann-Pick disease, and the intermediate types encompass a cluster of variants combining clinical features of both types A and B. {ECO:0000269|PubMed:12556236, ECO:0000269|PubMed:1391960, ECO:0000269|PubMed:15221801, ECO:0000269|PubMed:15877209, ECO:0000269|PubMed:1618760, ECO:0000269|PubMed:1718266, ECO:0000269|PubMed:19405096, ECO:0000269|PubMed:2023926, ECO:0000269|PubMed:20386867, ECO:0000269|PubMed:8680412, ECO:0000269|PubMed:8693491, ECO:0000269|PubMed:9266408}. Niemann-Pick Hastalığı, Tip D, 257220, Otozomal Resesif (Niemann-Pick Hastalığı Tip C) (Prenatal) (MLPA)	Niemann-Pick disease, type D, 257220, Autosomal recessive (Niemann-Pick disease type C) (Prenatal) (MLPA)	NPC1	NPC1, NPC	MLPA (CNV)	Amniyon sıvısı / CVS / Heparinli ve EDTA'lı (İKİSİ BİRDEN) kordon kanı VE ANNEDEN EDTA'LI KAN		.	.	15	30	20	Prenatal	DISEASE: Niemann-Pick disease C1 (NPC1) [MIM:257220]: A lysosomal storage disorder that affects the viscera and the central nervous system. It is due to defective intracellular processing and transport of low-density lipoprotein derived cholesterol. It causes accumulation of cholesterol in lysosomes, with delayed induction of cholesterol homeostatic reactions. Niemann-Pick disease type C1 has a highly variable clinical phenotype. Clinical features include variable hepatosplenomegaly and severe progressive neurological dysfunction such as ataxia, dystonia and dementia. The age of onset can vary from infancy to late adulthood. An allelic variant of Niemann-Pick disease type C1 is found in people with Nova Scotia ancestry. Patients with the Nova Scotian clinical variant are less severely affected. (ECO:0000269|PubMed:10480349, ECO:0000269|PubMed:10521290, ECO:0000269|PubMed:10521297, ECO:0000269|PubMed:11182931, ECO:0000269|PubMed:11333381, ECO:0000269|PubMed:11349231, ECO:0000269|PubMed:11479732, ECO:0000269|PubMed:11545687, ECO:0000269|PubMed:11754101, ECO:0000269|PubMed:12401890, ECO:0000269|PubMed:12408188, ECO:0000269|PubMed:12554680, ECO:0000269|PubMed:12955717, ECO:0000269|PubMed:15774455, ECO:0000269|PubMed:16098014, ECO:0000269|PubMed:16126423, ECO:0000269|PubMed:16802107, ECO:0000269|PubMed:9211849, ECO:0000269|PubMed:9634529). Küçük Hücreli Akciğer Kanseri, Somatik, 211980 (IRF1 geni) (Tüm Gen Dizi Analizi) (Postnatal)	Nonsmall cell lung cancer, somatic, 211980 (IRF1 gene) (Sequence Analysis-All Coding Exons) (Postnatal)	IRF1	IRF1, MAR	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	Tümör dokusu (Taze ve ya etanol ile fikse) / Parafinize doku bloğu		30	120	.	.	60	Postnatal	DISEASE: Gastric cancer (GASC) [MIM:613659]: A malignant disease which starts in the stomach, can spread to the esophagus or the small intestine, and can extend through the stomach wall to nearby lymph nodes and organs. It also can metastasize to other parts of the body. The term gastric cancer or gastric carcinoma refers to adenocarcinoma of the stomach that accounts for most of all gastric malignant tumors. Two main histologic types are recognized, diffuse type and intestinal type carcinomas. Diffuse tumors are poorly differentiated infiltrating lesions, resulting in thickening of the stomach. In contrast, intestinal tumors are usually exophytic, often ulcerating, and associated with intestinal metaplasia of the stomach, most often observed in sporadic disease. {ECO:0000269|PubMed:10395927, ECO:0000269|PubMed:9679752}. Note=Disease susceptibility is associated with variations affecting the gene represented in this entry.;	Tumor tissue (Fresh or etanol fixed) /Parafinized tissue sample
Küçük Hücreli Dışı Akciğer Kanseri, Yatkınlık, 211980, Otozomal Resesif (Ekzon 18 - 19 - 20 - 21) (EGFR geni) (Dizi Analizi) (Postnatal)	Nonsmall cell lung cancer, susceptibility to, 211980, Autosomal recessive (EGFR gene) (Sequence Analysis) (Postnatal)	EGFR	EGFR, NSBD2	Dizi Analizi/ Sequence Analysis	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	DISEASE: Lung cancer (LNCR) [MIM:211980]: A common malignancy affecting tissues of the lung. EDTA Blood Sample
Obezite, Yatkınlık BMIQ12 İçin, 612362 (PCSK1 geni) (Tüm Gen Dizi Analizi) (Postnatal)	Obesity, susceptibility to, BMIQ12, 612362 (PCSK1 gene) (Sequence Analysis-All Coding Exons) (Postnatal)	PCSK1	PCSK1, NEC1, PC1, PC3, BMIQ12	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	DISEASE: Proprotein convertase 1 deficiency (PC1 deficiency) [MIM:600955]: Characterized by obesity, hypogonadism, hypoadrenalism, reactive hypoglycemia as well as marked small-intestinal absorptive dysfunction It is due to impaired processing of prohormones. {ECO:0000269|PubMed:14617756, ECO:0000269|PubMed:17595246, ECO:0000269|PubMed:9207799}. Note=The disease is caused by mutations affecting the gene represented in this entry.;	EDTA Blood Sample
Obezite, Yatkınlık, BMIQ14, 612460, Otozomal Resesif (FTO geni) (Tüm Gen Dizi Analizi) (Postnatal)	Obesity, susceptibility to, BMIQ14, 612460, Autosomal recessive (FTO gene) (Sequence Analysis-All Coding Exons) (Postnatal)	FTO	FTO, GDFD, BMIQ14	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	DISEASE: Obesity (OBESITY) [MIM:601665]: A condition characterized by an increase of body weight beyond the limitation of skeletal and physical requirements, as the result of excessive accumulation of body fat. [ECO:0000269|PubMed:26287746]. Note=Disease susceptibility is associated with variations affecting the gene represented in this entry. A pathogenic intronic FTO variation (rs1421085) disrupts an evolutionarily conserved motif for ARID5B binding. Loss of ARID5B binding results in overexpression of two genes distal to FTO, IRX3 and IRX5. IRX3 and IRX5 overexpression shifts pre-adipocytes differentiation from brown to white fat cells, resulting in increased lipid storage and loss of mitochondrial thermogenesis. {ECO:0000269|PubMed:26287746}.;	EDTA Blood Sample
Obezite, BMIQ18, Yatkınlık, 615457, Otozomal Dominant (MRAP2 geni) (Tüm Gen Dizi Analizi) (Postnatal)	Obesity, susceptibility to, BMIQ18, 615457, Autosomal dominant (MRAP2 gene) (Sequence Analysis-All Coding Exons) (Postnatal)	MRAP2	MRAP2, C6orf117, BMIQ18	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	DISEASE: Obesity (OBESITY) [MIM:601665]: A condition characterized by an increase of body weight beyond the limitation of skeletal and physical requirements, as the result of excessive accumulation of body fat. [ECO:0000269	PubMed:23969016]. Note=Disease susceptibility may be associated with variations affecting the gene represented in this entry.;	EDTA Blood Sample
Obezite, Yatkınlık BMIQ4 İçin, 607447 (UCP2 geni) (Tüm Gen Dizi Analizi) (Postnatal)	Obesity, susceptibility to, BMIQ4, 607447 (UCP2 gene) (Sequence Analysis-All Coding Exons) (Postnatal)	UCP2	UCP2, BMIQ4	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	.	EDTA Blood Sample

Obezite, Varyasyon, 601665, Otozomal Resesif, Otozomal Dominant, Multifaktöriyel (Obezite, Proopiyomelanokortin Eksikliğine Bağlı) (PPARGC1B geni) (Tüm Gen Dizi Analizi) (Postnatal)	Obesity, variation in, 601665, Autosomal recessive, Autosomal dominant, Multifactorial (Obesity due to pro-opiomelanocortin deficiency) (PPARGC1B gene) (Sequence Analysis-All Coding Exons) (Postnatal)	PPARGC1B	PPARGC1B, PGC1B, PERC	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	. Oküdentodijital Displazi, 164200, Otozomal Dominant; ODDD (Oküdentodijital Displazi) (GJA1 geni) (Tüm Gen Dizi Analizi) (Postnatal)	Oculodentodigital dysplasia, 164200, Autosomal dominant; ODDD (Oculodentodigital dysplasia) (GJA1 gene) (Sequence Analysis-All Coding Exons) (Postnatal)	GJA1	GJA1, CX43, ODDD, SDTY3, ODOD, HSS, AVSD3, HLHS1, CMDR, EKVP	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	DISEASE: Oculodentodigital dysplasia (ODDD) [MIM:164200]: A disease characterized by a typical facial appearance and variable involvement of the eyes, dentition, and fingers. Characteristic facial features include a narrow, pinched nose with hypoplastic alae nasi, prominent columella and thin anteverted nares together with a narrow nasal bridge, and prominent epicanthic folds giving the impression of hypertelorism. The teeth are usually small and carious. Typical eye findings include microphthalmia and microcornea. The characteristic digital malformation is complete syndactyly of the fourth and fifth fingers (syndactyly type III) but the third finger may be involved and associated camptodactyly is a common finding. Cardiac abnormalities are observed in rare instances. {ECO:0000269|PubMed:12457340, ECO:0000269|PubMed:14729836, ECO:0000269|PubMed:15108203, ECO:0000269|PubMed:15637728, ECO:0000269|PubMed:16219735, ECO:0000269|PubMed:16222672, ECO:0000269|PubMed:16378922, ECO:0000269|PubMed:16709485, ECO:0000269|PubMed:16813608, ECO:0000269|PubMed:16816024, ECO:0000269|PubMed:17509830, ECO:0000269|PubMed:18161618, ECO:0000269|PubMed:19338053, ECO:0000269|PubMed:21670345, ECO:0000269|PubMed:23550541, ECO:0000269|PubMed:24508941}. Typical facial features include a prominent forehead, frontal bossing, short nose with a depressed broad bridge, short columella, anteverted nostrils, long philtrum, and small chin. (ECO:0000269	PubMed:19481194). Note=The disease is caused by mutations affecting the gene represented in this entry. Point mutations leading to protein truncation, as well as larger genomic rearrangements resulting in exon deletions, have been found in family segregating omodysplasia type 1. All mutations identified in individuals affected by omodysplasia could lead to the absence of a functional protein, the mutant RNAs being suspected to be nonsense-mediated mRNA decay (NMD) targets. Even if the mRNA escapes NMD and is translated, all mutations are expected to disrupt the three-dimensional protein structure and often to abolish multiple highly conserved cysteine residues.;	EDTA Blood Sample

Aniridia is not just an isolated defect in iris development but it is associated with macular and optic nerve hypoplasia, cataract, corneal changes, nystagmus. Visual acuity is generally low but is unrelated to the degree of iris hypoplasia. Glaucoma is a secondary problem causing additional visual loss over time. {ECO:0000269|PubMed:10234503, ECO:0000269|PubMed:10737978, ECO:0000269|PubMed:11309364, ECO:0000269|PubMed:11553050, ECO:0000269|PubMed:11826019, ECO:0000269|PubMed:12552561, ECO:0000269|PubMed:12634864, ECO:0000269|PubMed:21850189, ECO:0000269|PubMed:8364574, ECO:0000269|PubMed:9147640, ECO:0000269|PubMed:9281415, ECO:0000269|PubMed:9792406, ECO:0000269|PubMed:9856761, ECO:0000269|PubMed:9931324, ECO:0000269|Ref.26, ECO:0000269|Ref.27}. Other clinical definitions for LFS have been proposed (PubMed:8118819 and PubMed:8718514) and called Li-Fraumeni like syndrome (LFL). In these families affected relatives develop a diverse set of malignancies at unusually early ages. Four types of cancers account for 80% of tumors occurring in TP53 germline mutation carriers: breast cancers, soft tissue and bone sarcomas, brain tumors (astrocytomas) and adrenocortical carcinomas. Less frequent tumors include choroid plexus carcinoma or papilloma before the age of 15, rhabdomyosarcoma before the age of 5, leukemia, Wilms tumor, malignant phyllodes tumor, colorectal and gastric cancers. {ECO:0000269	PubMed:10484981}. It results in low-back pain and unilateral leg pain. {ECO:0000269|PubMed:18304494}. Note=Disease susceptibility is associated with variations affecting the gene represented in this entry. Susceptibility to intervertebral disk disease, particularly lumbar disk degeneration, is conferred by a triplet repeat expansion polymorphism. ASPN allele having 14 aspartic acid repeats in the N-terminal region of the protein (D14), is associated with the disorder in some populations (PubMed:18304494). {ECO:0000269|PubMed:18304494}.;	EDTA Blood Sample
Hafif Kondrodisplazi İle Osteoartrit, 604864, Otozomal Dominant; OSCDP (Hafif Spondiloepifizyal Displazi-Erken Başlayan Osteoartrit, COL2A1 Mutasyonuna Bağlı) (COL2A1 geni) (Tüm Gen Dizi Analizi) (Postnatal)	Osteoarthritis with mild chondrodysplasia, 604864, Autosomal dominant; OSCDP (Mild spondyloepiphyseal dysplasia due to COL2A1 mutation with early-onset osteoarthritis) (COL2A1 gene) (Sequence Analysis-All Coding Exons) (Postnatal)	COL2A1	COL2A1	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	DISEASE: Stickler syndrome 1 (STL1) [MIM:108300]: An autosomal dominant form of Stickler syndrome, an inherited disorder that associates ocular signs with more or less complete forms of Pierre Robin sequence, bone disorders and sensorineural deafness. Ocular disorders may include juvenile cataract, myopia, strabismus, vitreoretinal or chorioretinal degeneration, retinal detachment, and chronic uveitis. Pierre Robin sequence includes an opening in the roof of the mouth (a cleft palate), a large tongue (macroglossia), and a small lower jaw (micrognathia). Bones are affected by slight platyspondylisis and large, often defective epiphyses. Juvenile joint laxity is followed by early signs of arthrosis. The degree of hearing loss varies among affected individuals and may become more severe over time. Syndrome expressivity is variable. {ECO:0000269|PubMed:11007540, ECO:0000269|PubMed:20513134, ECO:0000269|PubMed:7977371}. Note=The disease is caused by mutations affecting the gene represented in this entry.	EDTA Blood Sample

Osteoartrit-5, 612400 (Fibula Aplazisi-Kompleks Brakidaktili Sendromu (Du Pan Sendromu)) (GDF5 geni) (Tüm Gen Dizi Analizi) (Postnatal)	Osteoarthritis-5, 612400 (Fibular aplasia-complex brachydactyly syndrome) (GDF5 gene) (Sequence Analysis-All Coding Exons) (Postnatal)	GDF5	GDF5, CDMP1, SYNS2, OS5, BDA1C, SYM1B	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	DISEASE: Brachydactyly A2 (BDA2) [MIM:112600]: A form of brachydactyly. Brachydactyly defines a group of inherited malformations characterized by shortening of the digits due to abnormal development of the phalanges and/or the metacarpals. In brachydactyly type A2 shortening of the middle phalanges is confined to the index finger and the second toe, all other digits being more or less normal. Because of a rhomboid or triangular shape of the affected middle phalanx, the end of the second finger usually deviates radially. {ECO:0000269|PubMed:16127465, ECO:0000269|PubMed:18203755, ECO:0000269|PubMed:21976273}. Serum calcium, phosphorus and alkaline phosphatase levels are normal. Radiologically, it is characterized by early thickening of the endosteum of long bones, the skull and of the mandible. With advancing age, the trabeculae of the metaphysis become thickened. WENHY becomes clinically and radiologically evident by adolescence, does not cause deformity except in the skull and mandible, and is not associated with bone pain or fracture. Affected patients have normal height, proportion, intelligence and longevity. {ECO:0000269	PubMed:12579474}. Note=The disease is caused by mutations affecting the gene represented in this entry.	Amniotic Fluid / CVS / Heparinized and EDTA (BOTH) Fetal Blood and Maternal EDTA Blood Sample

Osteoporoz, 166710, Otozomal Dominant (LRP5 geni) (Tüm Gen Dizi Analizi) (Postnatal)	Osteoporosis, 166710, Autosomal dominant (LRP5 gene) (Sequence Analysis-All Coding Exons) (Postnatal)	LRP5	LRP5, BMND1, LRP7, LR3, OPPG, VBCH2, OPTA1, EVR4	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	DISEASE: Endosteal hyperostosis, Worth type (WENHY) [MIM:144750]: An autosomal dominant sclerosing bone dysplasia clinically characterized by elongation of the mandible, increased gonial angle, flattened forehead, and the presence of a slowly enlarging osseous prominence of the hard palate (torus palatinus). Serum calcium, phosphorus and alkaline phosphatase levels are normal. Radiologically, it is characterized by early thickening of the endosteum of long bones, the skull and of the mandible. With advancing age, the trabeculae of the metaphysis become thickened. WENHY becomes clinically and radiologically evident by adolescence, does not cause deformity except in the skull and mandible, and is not associated with bone pain or fracture. Affected patients have normal height, proportion, intelligence and longevity. {ECO:0000269	PubMed:12579474}. Note=The disease is caused by mutations affecting the gene represented in this entry.	EDTA Blood Sample

Osteoporoz, Erken Başlangıçlı, Yatkınlık, Otozomal Dominant, 615221 (İdiopatik Jüvenil Osteoporoz) (WNT1 geni) (Tüm Gen Dizi Analizi) (Postnatal)	Osteoporosis, early-onset, susceptibility to, autosomal dominant, 615221 (Idiopathic juvenile osteoporosis) (WNT1 gene) (Sequence Analysis-All Coding Exons) (Postnatal)	WNT1	WNT1, INT1, OI15, BMND16	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	DISEASE: Osteoporosis (OSTEOP) [MIM:166710]: A systemic skeletal disorder characterized by decreased bone mass and deterioration of bone microarchitecture without alteration in the composition of bone. The result is fragile bones and an increased risk of fractures, even after minimal trauma. Osteoporosis is a chronic condition of multifactorial etiology and is usually clinically silent until a fracture occurs. (ECO:0000269|PubMed:23499309, ECO:0000269|PubMed:23656646). Note=Disease susceptibility is associated with variations affecting the gene represented in this entry.	EDTA Blood Sample
Osteoporoz, İnvolüsyonel, 166710, Otozomal Dominant (VDR geni) (Tüm Gen Dizi Analizi) (Postnatal)	Osteoporosis, involutional, 166710, Autosomal dominant (VDR gene) (Sequence Analysis-All Coding Exons) (Postnatal)	VDR	VDR	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	DISEASE: Rickets vitamin D-dependent 2A (VDDR2A) [MIM:277440]: A disorder of vitamin D metabolism resulting in severe rickets, hypocalcemia and secondary hyperparathyroidism. Most patients have total alopecia in addition to rickets. (ECO:0000269|PubMed:1652893, ECO:0000269|PubMed:2177843, ECO:0000269|PubMed:2849209, ECO:0000269|PubMed:7828346, ECO:0000269|PubMed:8106618, ECO:0000269|PubMed:8381803, ECO:0000269|PubMed:8392085, ECO:0000269|PubMed:8675579, ECO:0000269|PubMed:8961271, ECO:0000269|PubMed:9005998). Note=The disease is caused by mutations affecting the gene represented in this entry.;	EDTA Blood Sample
Osteoporoz, Menopoz Sonrası, 166710, Otozomal Dominant (COL1A2 geni) (Tüm Gen Dizi Analizi) (Postnatal)	Osteoporosis, postmenopausal, 166710, Autosomal dominant (COL1A2 gene) (Sequence Analysis-All Coding Exons) (Postnatal)	COL1A2	COL1A2	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	DISEASE: Ehlers-Danlos syndrome 7B (EDS7B) [MIM:130060]: A connective tissue disorder characterized by hyperextensible skin, atrophic cutaneous scars due to tissue fragility and joint hyperlaxity. Marked by bilateral congenital hip dislocation, hyperlaxity of the joints, and recurrent partial dislocations. (ECO:0000269|PubMed:1577745, ECO:0000269|PubMed:2394758, ECO:0000269|PubMed:3680255). Pierre Robin sequence includes an opening in the roof of the mouth (a cleft palate), a large tongue (macroglossia), and a small lower jaw (micrognathia). Bones are affected by slight platyspondylisis and large, often defective epiphyses. Juvenile joint laxity is followed by early signs of arthrosis. The degree of hearing loss varies among affected individuals and may become more severe over time. Syndrome expressivity is variable. {ECO:0000269	PubMed:9506662}. Note=The disease is caused by mutations affecting the gene represented in this entry.	Amniotic Fluid / CVS / Heparinized and EDTA (BOTH) Fetal Blood and Maternal EDTA Blood Sample
Ovalositoz, SA Tipi, 166900, Otozomal Dominant; SAO (Güneydoğu Asya Ovalositozis) (SLC4A1 geni) (Tüm Gen Dizi Analizi) (Postnatal)	Ovalocytosis, SA type, 166900, Autosomal dominant; SAO (Southeast Asian ovalocytosis) (SLC4A1 gene) (Sequence Analysis-All Coding Exons) (Postnatal)	SLC4A1	SLC4A1, AE1, EPB3, SPH4, SAO, CHC	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	DISEASE: Ovalocytosis, Southeast Asian (SAO) [MIM:166900]: A hereditary hematologic disorder characterized by ovalocytic erythrocytes that are rigid and exhibit reduced expression of many erythrocyte antigens. Clinical manifestations include mild hemolysis, intermittent jaundice and gallstones. However, the disorder is most often asymptomatic. {ECO:0000269|PubMed:1538405, ECO:0000269|PubMed:1722314}. Note=The disease is caused by mutations affecting the gene represented in this entry.	EDTA Blood Sample
Over Kanseri, Somatik (ERBB2-HER2) (FISH)	Ovarian cancer, somatic (ERBB2-HER2) (FISH)	ERBB2	ERBB2, NGL, NEU, HER2	FISH	Tümör dokusu (Taze ve ya etanol ile fikse) / Parafinize doku bloğu		10	30	.	.	20	Postnatal	.	Tumor tissue (Fresh or etanol fixed) /Parafinized tissue sample

Breast neoplasms can be distinguished by their histologic pattern. Invasive ductal carcinoma is by far the most common type. Breast cancer is etiologically and genetically heterogeneous. Important genetic factors have been indicated by familial occurrence and bilateral involvement. Mutations at more than one locus can be involved in different families or even in the same case. {ECO:0000269|PubMed:10323242, ECO:0000269|PubMed:12442275, ECO:0000269|PubMed:12938098, ECO:0000269|PubMed:14722926, ECO:0000269|PubMed:18285836, ECO:0000269|PubMed:7545954, ECO:0000269|PubMed:7894491, ECO:0000269|PubMed:7894493, ECO:0000269|PubMed:7939630, ECO:0000269|PubMed:8554067, ECO:0000269|PubMed:8723683, ECO:0000269|PubMed:8776600, ECO:0000269|PubMed:9482581, ECO:0000269|PubMed:9609997, ECO:0000269|PubMed:9760198}. Note=Disease susceptibility is associated with variations affecting the gene represented in this entry. Mutations in BRCA1 are thought to be responsible for 45% of inherited breast cancer. Moreover, BRCA1 carriers have a 4-fold increased risk of colon cancer, whereas male carriers face a 3- fold increased risk of prostate cancer. Cells lacking BRCA1 show defects in DNA repair by homologous recombination.	EDTA Blood Sample
Pankreas Kanseri, Yatkınlık, 4, 614320; PNCA4 (Ailesel Pankreas Karsinomu) (MLPA)	Pancreatic cancer, susceptibility to, 4, 614320; PNCA4 (Familial pancreatic carcinoma) (MLPA)	BRCA1	BRCA1, PSCP, BROVCA1, PNCA4	MLPA (CNV)	EDTA'lı Kan (2-4 ml)		20	60	.	.	30	Postnatal	DISEASE: Breast cancer (BC) [MIM:114480]: A common malignancy originating from breast epithelial tissue. Breast neoplasms can be distinguished by their histologic pattern. Invasive ductal carcinoma is by far the most common type. Breast cancer is etiologically and genetically heterogeneous. Important genetic factors have been indicated by familial occurrence and bilateral involvement. Mutations at more than one locus can be involved in different families or even in the same case. {ECO:0000269|PubMed:10323242, ECO:0000269|PubMed:12442275, ECO:0000269|PubMed:12938098, ECO:0000269|PubMed:14722926, ECO:0000269|PubMed:18285836, ECO:0000269|PubMed:7545954, ECO:0000269|PubMed:7894491, ECO:0000269|PubMed:7894493, ECO:0000269|PubMed:7939630, ECO:0000269|PubMed:8554067, ECO:0000269|PubMed:8723683, ECO:0000269|PubMed:8776600, ECO:0000269|PubMed:9482581, ECO:0000269|PubMed:9609997, ECO:0000269|PubMed:9760198}. Pankreas Kanseri / Melanom Sendromu, 606719, Otozomal Dominant (Ailesel Atipik Multipl Mol Melanom Sendromu) (CDKN2A geni) (Tüm Gen Dizi Analizi) (Postnatal)	Pancreatic cancer/melanoma syndrome, 606719, Autosomal dominant (Familial atypical multiple mole melanoma syndrome) (CDKN2A gene) (Sequence Analysis-All Coding Exons) (Postnatal)	CDKN2A	CDKN2A, MTS1, P16, MLM, CMM2	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	DISEASE: Li-Fraumeni syndrome (LFS) [MIM:151623]: Autosomal dominant familial cancer syndrome that in its classic form is defined by the existence of a proband affected by a sarcoma before 45 years with a first degree relative affected by any tumor before 45 years and another first degree relative with any tumor before 45 years or a sarcoma at any age. Other clinical definitions for LFS have been proposed (PubMed:8118819 and PubMed:8718514) and called Li-Fraumeni like syndrome (LFL). In these families affected relatives develop a diverse set of malignancies at unusually early ages. Four types of cancers account for 80% of tumors occurring in TP53 germline mutation carriers: breast cancers, soft tissue and bone sarcomas, brain tumors (astrocytomas) and adrenocortical carcinomas. Less frequent tumors include choroid plexus carcinoma or papilloma before the age of 15, rhabdomyosarcoma before the age of 5, leukemia, Wilms tumor, malignant phyllodes tumor, colorectal and gastric cancers. {ECO:0000269	PubMed:10494981}. Note=The disease is caused by mutations affecting the gene represented in this entry.	EDTA Blood Sample

Additional features are characteristic postural abnormalities, dysautonomia, dystonic cramps, and dementia. The pathology of Parkinson disease involves the loss of dopaminergic neurons in the substantia nigra and the presence of Lewy bodies (intraneuronal accumulations of aggregated proteins), in surviving neurons in various areas of the brain. The disease is progressive and usually manifests after the age of 50 years, although early-onset cases (before 50 years) are known. The majority of the cases are sporadic suggesting a multifactorial etiology based on environmental and genetic factors. However, some patients present with a positive family history for the disease. Familial forms of the disease usually begin at earlier ages and are associated with atypical clinical features. {ECO:0000269|PubMed:12847165, ECO:0000269|PubMed:16148263, ECO:0000269|PubMed:19286955}. Note=Disease susceptibility may be associated with variations affecting the gene represented in this entry.	EDTA Blood Sample
Parkinson Hastalığı, Geç Başlangıçlı, Yatkınlık, 168600, Sporadik Vakalar, Multifaktöryel (ATXN2 geni) (Tüm Gen Dizi Analizi) (Postnatal)	Parkinson disease, late-onset, susceptibility to, 168600, Isolated cases, Multifactorial (ATXN2 gene) (Sequence Analysis-All Coding Exons) (Postnatal)	ATXN2	ATXN2, ATX2, SCA2, ASL13	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	DISEASE: Spinocerebellar ataxia 2 (SCA2) [MIM:183090]: Spinocerebellar ataxia is a clinically and genetically heterogeneous group of cerebellar disorders. Patients show progressive incoordination of gait and often poor coordination of hands, speech and eye movements, due to cerebellum degeneration with variable involvement of the brainstem and spinal cord. SCA2 belongs to the autosomal dominant cerebellar ataxias type I (ADCA I) which are characterized by cerebellar ataxia in combination with additional clinical features like optic atrophy, ophthalmoplegia, bulbar and extrapyramidal signs, peripheral neuropathy and dementia. SCA2 is characterized by hyporeflexia, myoclonus and action tremor and dopamine-responsive parkinsonism. In some patients, SCA2 presents as pure familial parkinsonism without cerebellar signs. {ECO:0000269|PubMed:8896555, ECO:0000269|PubMed:8896556, ECO:0000269|PubMed:8896557}. Note=The disease is caused by mutations affecting the gene represented in this entry. SCA2 is caused by expansion of a CAG repeat resulting in about 36 to 52 repeats in some patients. Longer expansions result in earlier the expansion, onset of the disease.	EDTA Blood Sample
Parkinson Hastalığı, Yatkınlık, 168600, Sporadik Vakalar, Multifaktöryel (MAPT geni) (Tüm Gen Dizi Analizi) (Postnatal)	Parkinson disease, susceptibility to, 168600, Isolated cases, Multifactorial (MAPT gene) (Sequence Analysis-All Coding Exons) (Postnatal)	MAPT	MAPT, MTBT1, DDPAC, MSTD	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	DISEASE: Pick disease of the brain (PIDB) [MIM:172700]: A rare form of dementia pathologically defined by severe atrophy, neuronal loss and gliosis. It is characterized by the occurrence of tau-positive inclusions, swollen neurons (Pick cells) and argentophilic neuronal inclusions known as Pick bodies that disproportionally affect the frontal and temporal cortical regions. Clinical features include aphasia, apraxia, confusion, anomia, memory loss and personality deterioration. {ECO:0000269|PubMed:10604746, ECO:0000269|PubMed:11089577, ECO:0000269|PubMed:11117542, ECO:0000269|PubMed:11601501, ECO:0000269|PubMed:11891833}. Note=The disease is caused by mutations affecting the gene represented in this entry.	EDTA Blood Sample

In PSS2 patients, skin peeling is painless and strictly limited to the dorsa of the hands and feet. It is accompanied by painless erythema and spontaneous non-scarring healing. Ultrastructural and histological analysis shows a level of blistering high in the epidermis at the stratum granulosum-stratum corneum junction. {ECO:0000269|PubMed:16380904}. Note=The disease is caused by mutations affecting the gene represented in this entry.;	EDTA Blood Sample
Soyulan Deri Sendromu 3, 616265, Otozomal Resesif; PSS3 (Soyulmuş Deri Sendromu Tip A) (CHST8 geni) (Tüm Gen Dizi Analizi) (Postnatal)	Peeling skin syndrome 3, 616265, Autosomal recessive; PSS3 (Peeling skin syndrome type A) (CHST8 gene) (Sequence Analysis-All Coding Exons) (Postnatal)	CHST8	CHST8, GALNAC4ST1, PSS3	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	DISEASE: Peeling skin syndrome 3 (PSS3) [MIM:616265]: A form of peeling skin syndrome, a genodermatosis characterized by generalized, continuous shedding of the outer layers of the epidermis. Two main PSS subtypes have been suggested. Patients with non-inflammatory PSS (type A) manifest white scaling, with painless and easy removal of the skin, irritation when in contact with water, dust and sand, and no history of erythema, pruritis or atopy. Inflammatory PSS (type B) is associated with generalized erythema, pruritus and atopy. It is an ichthyosiform erythroderma characterized by lifelong patchy peeling of the entire skin with onset at birth or shortly after. Several patients have been reported with high IgE levels. PSS3 is characterized by generalized white scaling occurring over the upper and lower extremities. Symptoms start during the second half of the first decade of life. {ECO:0000269|PubMed:22289416}. Note=The disease is caused by mutations affecting the gene represented in this entry.;	EDTA Blood Sample

Children with the NALD presentation may reach their teens, while patients with the IRD presentation may reach adulthood. The clinical conditions are often slowly progressive in particular with respect to loss of hearing and vision. The biochemical abnormalities include accumulation of phytanic acid, very long chain fatty acids (VLCFA), di- and trihydroxycholestanoic acid and pipecolic acid. {ECO:0000269|PubMed:10482504, ECO:0000269|PubMed:7719337}. It is due to failure of the primary vitreous to regress in utero, resulting in the presence of a retrolental fibrovascular membrane with persistence of the posterior portion of the tunica vasculosa lentis and hyaloid artery. Disease manifestations range from a trivial remnant of hyaloid vessels to a dense fibrovascular mass causing lens opacity and retinal detachment. {ECO:0000269|PubMed:21441919, ECO:0000269|PubMed:22068589, ECO:0000269|PubMed:22645276}. Note=The disease is caused by mutations affecting the gene represented in this entry. A 6.5 kb deletion that spans a remote cis regulatory element 20 kb upstream from ATOH7 has been found in PHPVAR patients (PubMed:21441919). {ECO:0000269|PubMed:21441919},.	EDTA Blood Sample
Kalıcı Müllerian Kanal Sendromu, Tip 1, 261550, Otozomal Resesif (Persistant Müllerian Kanal Sendromu) (AMH geni) (Tüm Gen Dizi Analizi) (Postnatal)	Persistent Mullerian duct syndrome, type I, 261550, Autosomal recessive (Persistent Müllerian duct syndrome) (AMH gene) (Sequence Analysis-All Coding Exons) (Postnatal)	AMH	AMH, MIF	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	DISEASE: Persistent Muellerian duct syndrome 1 (PMDS1) [MIM:261550]: A form of male pseudohermaphroditism characterized by a failure of Muellerian duct regression in otherwise normal males. {ECO:0000269|PubMed:8162013, ECO:0000269|PubMed:8872466}. Note=The disease is caused by mutations affecting the gene represented in this entry.;	EDTA Blood Sample
Kalıcı Müllerian Kanal Sendromu, Tip 2, 261550, Otozomal Resesif; PMDS (Persistant Müllerian Kanal Sendromu) (AMHR2 geni) (Tüm Gen Dizi Analizi) (Postnatal)	Persistent Mullerian duct syndrome, type II, 261550, Autosomal recessive; PMDS (Persistent Müllerian duct syndrome) (AMHR2 gene) (Sequence Analysis-All Coding Exons) (Postnatal)	AMHR2	AMHR2, AMHR	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	DISEASE: Persistent Muellerian duct syndrome 2 (PMDS2) [MIM:261550]: A form of male pseudohermaphroditism characterized by a failure of Muellerian duct regression in otherwise normal males. {ECO:0000269|PubMed:11549681, ECO:0000269|PubMed:8872466}. Note=The disease is caused by mutations affecting the gene represented in this entry.;	EDTA Blood Sample
Persistan Truncus Arteriosus, 217095 (Konotrunkal Kalp Malformasyonları) (NKX2-6 geni) (Tüm Gen Dizi Analizi) (Postnatal)	Persistent truncus arteriosus, 217095 (Conotruncal heart malformations) (NKX2-6 gene) (Sequence Analysis-All Coding Exons) (Postnatal)	NKX2-6	NKX2-6, CSX2, CTHM	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	DISEASE: Conotruncal heart malformations (CTHM) [MIM:217095]: A group of congenital heart defects involving the outflow tracts. Examples include truncus arteriosus communis, double-outlet right ventricle and transposition of great arteries. Truncus arteriosus communis is characterized by a single outflow tract instead of a separate aorta and pulmonary artery. In transposition of the great arteries, the aorta arises from the right ventricle and the pulmonary artery from the left ventricle. In double outlet of the right ventricle, both the pulmonary artery and aorta arise from the right ventricle. {ECO:0000269|PubMed:15649947, ECO:0000269|PubMed:14421281, ECO:0000269|PubMed:25195019, ECO:0000269|PubMed:25380965}. Note=The disease may be caused by mutations affecting the gene represented in this entry.;	EDTA Blood Sample
Persistan Truncus Arteriosus, 217095 (Trunkus Arteriozus) (GATA6 geni) (Tüm Gen Dizi Analizi) (Postnatal)	Persistent truncus arteriosus, 217095 (Truncus arteriosus) (GATA6 gene) (Sequence Analysis-All Coding Exons) (Postnatal)	GATA6	GATA6, AVSD5, ASD9, AVSD5, PACHD	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	DISEASE: Tetralogy of Fallot (TOF) [MIM:187500]: A congenital heart anomaly which consists of pulmonary stenosis, ventricular septal defect, dextroposition of the aorta (aorta is on the right side instead of the left) and hypertrophy of the right ventricle. In this condition, blood from both ventricles (oxygen-rich and oxygen-poor) is pumped into the body often causing cyanosis. {ECO:0000269|PubMed:20581743, ECO:0000269|PubMed:20631719}. Note=The disease is caused by mutations affecting the gene represented in this entry.	EDTA Blood Sample
Peters Plus Sendromu, 261540, Otozomal Resesif (Peters Plus Sendromu) (B3GLCT geni) (Tüm Gen Dizi Analizi) (Postnatal)	Peters-plus syndrome, 261540, Autosomal recessive (Peters plus syndrome) (B3GLCT gene) (Sequence Analysis-All Coding Exons) (Postnatal)	B3GLCT	B3GLCT, B3GALTL, B3GTL	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	.	EDTA Blood Sample

Pitriazis Rubra Pilaris, 173200, Otozomal Dominant; PRP (Pitriasis Rubra Pilaris) (CARD14 geni) (Tüm Gen Dizi Analizi) (Postnatal)	Pityriasis rubra pilaris, 173200, Autosomal dominant; PRP (Pityriasis rubra pilaris) (CARD14 gene) (Sequence Analysis-All Coding Exons) (Postnatal)	CARD14	CARD14, CARMA2, BIMP2, PSORS2, PSS1, PRP	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	DISEASE: Pityriasis rubra pilaris (PRP) [MIM:173200]: A rare, papulosquamous skin disease characterized by the appearance of keratotic follicular papules, well-demarcated salmon-colored erythematous plaques covered with fine powdery scales interspersed with distinct islands of uninvolved skin, and palmoplantar keratoderma. Most cases are sporadic. The rare familial cases show autosomal dominant inheritance with incomplete penetrance and variable expression. Familial PRP usually presents at birth or appears during the first years of life and runs a chronic course. It is characterized by prominent follicular hyperkeratosis, diffuse palmoplantar keratoderma, and erythema. {ECO:0000269	PubMed:22703878}. Note=The disease is caused by mutations affecting the gene represented in this entry.;	EDTA Blood Sample

Plasenta Dekolmanı (NOS3 geni) (Tüm Gen Dizi Analizi) (Postnatal)	Placental abruption (NOS3 gene) (Sequence Analysis-All Coding Exons) (Postnatal)	NOS3	NOS3	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	DISEASE: Note=Variation in NOS3 seem to be associated with susceptibility to coronary spasm. {ECO:0000269|PubMed:11740345, ECO:0000269|PubMed:9737729}.	EDTA Blood Sample
Plazma Fibronektin Eksikliği, 614101, Otozomal Dominant (FN1 geni) (Tüm Gen Dizi Analizi) (Postnatal)	Plasma fibronectin deficiency, 614101, Autosomal dominant (FN1 gene) (Sequence Analysis-All Coding Exons) (Postnatal)	FN1	FN1, FN, LETS, FNZ, GFND2	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	DISEASE: Glomerulopathy with fibronectin deposits 2 (GFND2) [MIM:601894]: Genetically heterogeneous autosomal dominant disorder characterized clinically by proteinuria, microscopic hematuria, and hypertension that leads to end-stage renal failure in the second to fifth decade of life. {ECO:0000269|PubMed:18268355}. Note=The disease is caused by mutations affecting the gene represented in this entry.	EDTA Blood Sample
Plazma Trigliserit Düzeyi QTL, Düşük, 615881, Otozomal Dominant; TGQTL (ANGPTL4 geni) (Tüm Gen Dizi Analizi) (Postnatal)	Plasma triglyceride level QTL, low, 615881, Autosomal dominant; TGQTL (ANGPTL4 gene) (Sequence Analysis-All Coding Exons) (Postnatal)	ANGPTL4	ANGPTL4, PGAR, HFARP, FIAF, TGQTL	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	.	EDTA Blood Sample
Plazminojen Aktivatör İnhibitörü 1 Eksikliği, 613329, Otozomal Resesif, Otozomal Dominant (Konjenital Plazminojen Aktivatör İnhibitörü Tip 1 Eksikliği) (SERPINE1 geni) (Tüm Gen Dizi Analizi) (Postnatal)	Plasminogen activator inhibitor-1 deficiency, 613329, Autosomal recessive, Autosomal dominant (Congenital plasminogen activator inhibitor type 1 deficiency) (SERPINE1 gene) (Sequence Analysis-All Coding Exons) (Postnatal)	SERPINE1	PAI1, PLANH1, SERPINE1	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	DISEASE: Plasminogen activator inhibitor-1 deficiency (PAI-1D) [MIM:613329]: A hematologic disorder characterized by increased bleeding after trauma, injury, or surgery. Affected females have menorrhagia. The bleeding defect is due to increased fibrinolysis of fibrin blood clots due to deficiency of plasminogen activator inhibitor-1, which inhibits tissue and urinary activators of plasminogen. {ECO:0000269|PubMed:9207454}. Note=The disease is caused by mutations affecting the gene represented in this entry.	EDTA Blood Sample
Plazminojen Eksikliği, Tip 1, 217090, Otozomal Resesif (Hipoplazminojenemi) (PLG geni) (Tüm Gen Dizi Analizi) (Postnatal)	Plasminogen deficiency, type I, 217090, Autosomal recessive (Hypoplasminogenemia) (PLG gene) (Sequence Analysis-All Coding Exons) (Postnatal)	PLG	PLG	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	DISEASE: Plasminogen deficiency (PLGD) [MIM:217090]: A disorder characterized by decreased serum plasminogen activity. Two forms of the disorder are distinguished: type I deficiency is additionally characterized by decreased plasminogen antigen levels and clinical symptoms, whereas type 2 deficiency, also known as dysplasminogenemia, is characterized by normal, or slightly reduced antigen levels, and absence of clinical manifestations. Plasminogen deficiency type 1 results in markedly impaired extracellular fibrinolysis and chronic mucosal pseudomembranous lesions due to subepithelial fibrin deposition and inflammation. The most common clinical manifestation of type 1 deficiency is ligneous conjunctivitis in which pseudomembranes formation on the palpebral surfaces of the eye progresses to white, yellow-white, or red thick masses with a wood-like consistency that replace the normal mucosa. {ECO:0000269|PubMed:10233898, ECO:0000269|PubMed:1427790, ECO:0000269|PubMed:1986355, ECO:0000269|PubMed:6216475, ECO:0000269|PubMed:6238949, ECO:0000269|PubMed:8392398, ECO:0000269|PubMed:9242524, ECO:0000269|PubMed:9858247}. Poikiloderma, Nötropenik, 604173, Otozomal Resesif; PN (Poikiloderma-Nötropeni) (USB1 gen) (Tüm Gen Dizi Analizi) (Postnatal)	Poikiloderma with neutropenia, 604173, Autosomal recessive; PN (Poikiloderma with neutropenia) (USB1 gene) (Sequence Analysis-All Coding Exons) (Postnatal)	USB1	C16orf57, PN	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	DISEASE: Poikiloderma with neutropenia (PN) [MIM:604173]: A genodermatosis characterized by poikiloderma, pachyonychia and chronic neutropenia. The disorder starts as a papular erythematous rash on the limbs during the first year of life. It gradually spreads centripetally and, as the papular rash resolves, hypo- and hyperpigmentation result, with development of telangiectasias. Another skin manifestation is pachyonychia, but alopecia and leukoplakia are distinctively absent. Patients have recurrent pneumonias that usually result in reactive airway disease and/or chronic cough. One of the most important extracutaneous symptoms is an increased susceptibility to infections, mainly affecting the respiratory system, primarily due to a chronic neutropenia and to neutrophil functional defects. Bone marrow abnormalities accuunt for neutropenia and may evolve into myelodysplasia associated with the risk of leukemic transformation. Poikiloderma with neutropenia shows phenotypic overlap with Rothmund-Thomson syndrome. (ECO:0000269|PubMed:20004881, ECO:0000269|PubMed:20503306). Polidaktili, Preaksiyel Tip 2, 174500, Otozomal Dominant; PPD2 (Trifalangeal Basparmak-Polisindaktili Sendromu) (LMBR1 geni) (Tüm Gen Dizi Analizi) (Postnatal)	Polydactyly, preaxial type II, 174500, Autosomal dominant; PPD2 (Triphalangeal thumb-polysyndactyly syndrome) (LMBR1 gene) (Sequence Analysis-All Coding Exons) (Postnatal)	LMBR1	LMBR1, ACHP, C7orf2, PPD2, THYP, LSS	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	DISEASE: Laurin-Sandrow syndrome (LSS) [MIM:135750]: A rare autosomal dominant disorder characterized by polysyndactyly of hands and/or feet, mirror image duplication of the feet, nasal defects, and loss of identity between fibula and tibia. Some patients do not have nasal abnormalities (segmental Laurin-Sandrow syndrome). {ECO:0000269|PubMed:24456159}. Note=The disease is caused by mutations affecting the gene represented in this entry. Disease-causing mutations consists of duplications (16-75 kb) involving the ZPA regulatory sequence (ZRS), a SHH long-range cis- regulatory element, located in LMBR1 intron 5. The mutations do not alter normal LMBR1 expression and function, but affect SHH limb expression. {ECO:0000269|PubMed:24456159}.;	EDTA Blood Sample
Polidaktili, Preaksiyel, Tip 4, 174700, Otozomal Dominant (Polipolisindaktili) (GLI3 geni) (Tüm Gen Dizi Analizi) (Postnatal)	Polydactyly, preaxial, type IV, 174700, Autosomal dominant (Polysyndactyly) (GLI3 gene) (Sequence Analysis-All Coding Exons) (Postnatal)	GLI3	GLI3, PAPA, PAPB	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	DISEASE: Pallister-Hall syndrome (PHS) [MIM:146510]: An autosomal dominant disorder characterized by a wide range of clinical manifestations. Clinical features include hypothalamic hamartoma, pituitary dysfunction, central or postaxial polydactyly, and syndactyly. Malformations are frequent in the viscera, e.g. anal atresia, bifid uvula, congenital heart malformations, pulmonary or renal dysplasia. {ECO:0000269	PubMed:10441570}. Note=The disease is caused by mutations affecting the gene represented in this entry.	EDTA Blood Sample
Polidaktili, Preaksiyel, Tip 4, 174700, Otozomal Dominant (Polipolisindaktili) (MLPA)	Polydactyly, preaxial, type IV, 174700, Autosomal dominant (Polysyndactyly) (MLPA)	GLI3	GLI3, PAPA, PAPB	MLPA (CNV)	EDTA'lı Kan (2-4 ml)		20	60	.	.	30	Postnatal	DISEASE: Pallister-Hall syndrome (PHS) [MIM:146510]: An autosomal dominant disorder characterized by a wide range of clinical manifestations. Clinical features include hypothalamic hamartoma, pituitary dysfunction, central or postaxial polydactyly, and syndactyly. Malformations are frequent in the viscera, e.g. anal atresia, bifid uvula, congenital heart malformations, pulmonary or renal dysplasia. {ECO:0000269	PubMed:10441570}. Patients with Barrett esophagus have an increased risk of esophageal adenocarcinoma. The main cause of Barrett esophagus is gastroesophageal reflux. The retrograde movement of acid and bile salts from the stomach into the esophagus causes prolonged injury to the esophageal epithelium and induces chronic esophagitis, which in turn is believed to trigger the pathologic changes. {ECO:0000269	PubMed:21791690}. Note=The disease may be caused by mutations affecting the gene represented in this entry. Genetic variants in MSR1 have been found in individuals with Barrett esophagus and are thought to contribute to disease susceptibility.;	EDTA Blood Sample

Prostat Kanseri, Ailesel, 2, Yatkınlık, 614731; HPC2 (Ailesel Prostat Kanseri) (ELAC2 geni) (Tüm Gen Dizi Analizi) (Postnatal)	Prostate cancer, hereditary, 2, susceptibility to, 614731; HPC2 (Familial prostate cancer) (ELAC2 gene) (Sequence Analysis-All Coding Exons) (Postnatal)	ELAC2	ELAC2, HPC2, COXPD17	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	DISEASE: Combined oxidative phosphorylation deficiency 17 (COXPD17) [MIM:615440]: An autosomal recessive disorder of mitochondrial dysfunction characterized by onset of severe hypertrophic cardiomyopathy in the first year of life. Other features include hypotonia, poor growth, lactic acidosis, and failure to thrive. The disorder may be fatal in early childhood. {ECO:0000269	PubMed:23849775}. Note=The disease is caused by mutations affecting the gene represented in this entry.	EDTA Blood Sample
Prostat Kanseri, Progresyon, 176807, Otozomal Dominant (Ailesel Prostat Kanseri) (HIP1 geni) (Tüm Gen Dizi Analizi) (Postnatal)	Prostate cancer, progression of, 176807, Autosomal dominant (Familial prostate cancer) (HIP1 gene) (Sequence Analysis-All Coding Exons) (Postnatal)	HIP1	HIP1	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	DISEASE: Note=A chromosomal aberration involving HIP1 is found in a form of chronic myelomonocytic leukemia (CMML). Translocation t(5;7)(q33;q11.2) with PDGFRB (PubMed:9616134). The chimeric HIP1- PDGFRB transcript results from an in-frame fusion of the two genes (PubMed:9616134). The reciprocal PDGFRB-HIP1 transcript is not expressed (PubMed:9616134). {ECO:0000269	PubMed:9616134}.	EDTA Blood Sample
Prostat Kanseri, Somatik, 176807 (MAD1L1 geni) (Tüm Gen Dizi Analizi) (Postnatal)	Prostate cancer, somatic, 176807 (MAD1L1 gene) (Sequence Analysis-All Coding Exons) (Postnatal)	MAD1L1	MAD1L1, TXBP181	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	Tümör dokusu (Taze ve ya etanol ile fikse) / Parafinize doku bloğu		30	120	.	.	60	Postnatal	DISEASE: Note=Defects in MAD1L1 are involved in the development and/or progression of various types of cancer. {ECO:0000269|PubMed:10597320, ECO:0000269|PubMed:11423978}.	Tumor tissue (Fresh or etanol fixed) /Parafinized tissue sample
Prostat Kanseri, Somatik, 176807 (KLF6 geni) (Tüm Gen Dizi Analizi) (Postnatal)	Prostate cancer, somatic, 176807 (KLF6 gene) (Sequence Analysis-All Coding Exons) (Postnatal)	KLF6	KLF6, COPEB, BCD1, ZF9	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	Tümör dokusu (Taze ve ya etanol ile fikse) / Parafinize doku bloğu		30	120	.	.	60	Postnatal	DISEASE: Prostate cancer (PC) [MIM:176807]: A malignancy originating in tissues of the prostate. Most prostate cancers are adenocarcinomas that develop in the acini of the prostatic ducts. Other rare histopathologic types of prostate cancer that occur in approximately 5% of patients include small cell carcinoma, mucinous carcinoma, prostatic ductal carcinoma, transitional cell carcinoma, squamous cell carcinoma, basal cell carcinoma, adenoid cystic carcinoma (basaloid), signet-ring cell carcinoma and neuroendocrine carcinoma. {ECO:0000269|PubMed:11752579}. Note=The disease is caused by mutations affecting the gene represented in this entry.	Tumor tissue (Fresh or etanol fixed) /Parafinized tissue sample
Prostat Kanseri, Yatkınlık, 176807, Otozomal Dominant (Ailesel Prostat Kanseri) (MX01 geni) (Tüm Gen Dizi Analizi) (Postnatal)	Prostate cancer, susceptibility to, 176807, Autosomal dominant (Familial prostate cancer) (MX01 gene) (Sequence Analysis-All Coding Exons) (Postnatal)	MX01	MX01	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	.	EDTA Blood Sample
Prostat Kanseri, Yatkınlık, 176807, Otozomal Dominant (Ailesel Prostat Kanseri) (CDH1 geni) (Tüm Gen Dizi Analizi) (Postnatal)	Prostate cancer, susceptibility to, 176807, Autosomal dominant (Familial prostate cancer) (CDH1 gene) (Sequence Analysis-All Coding Exons) (Postnatal)	CDH1	CDH1, UVO, LCAM, ECAD	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	DISEASE: Hereditary diffuse gastric cancer (HDGC) [MIM:137215]: A cancer predisposition syndrome with increased susceptibility to diffuse gastric cancer. Diffuse gastric cancer is a malignant disease characterized by poorly differentiated infiltrating lesions resulting in thickening of the stomach. Malignant tumors start in the stomach, can spread to the esophagus or the small intestine, and can extend through the stomach wall to nearby lymph nodes and organs. It also can metastasize to other parts of the body. {ECO:0000269|PubMed:10319582, ECO:0000269|PubMed:12216071}. Note=Disease susceptibility is associated with variations affecting the gene represented in this entry. Heterozygous CDH1 germline mutations are responsible for familial cases of diffuse gastric cancer. Somatic mutations has also been found in patients with sporadic diffuse gastric cancer and lobular breast cancer.	EDTA Blood Sample

Psödohipoaldosteronizm, Tip 1, 264350, Otozomal Resesif, PHA1B (Jeneralize Psödohipoaldosteronizm Tip 1) (SCNN1A geni) (Tüm Gen Dizi Analizi) (Postnatal)	Pseudohypoaldosteronism, type I, 264350, Autosomal recessive, PHA1B (Generalized pseudohypoaldosteronism type 1) (SCNN1A gene) (Sequence Analysis-All Coding Exons) (Postnatal)	SCNN1A	SCNN1A, BESC2	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	DISEASE: Pseudohypoaldosteronism 1, autosomal recessive (PHA1B) [MIM:264350]: A rare salt wasting disease resulting from target organ unresponsiveness to mineralocorticoids. PHA1B is a severe form involving multiple organ systems, and characterized by an often fulminant presentation in the neonatal period with dehydration, hyponatremia, hyperkalemia, metabolic acidosis, failure to thrive and weight loss. {ECO:0000269|PubMed:10586178, ECO:0000269|PubMed:15853823, ECO:0000269|PubMed:18634878}. Note=The disease is caused by mutations affecting the gene represented in this entry. The degree of channel function impairment differentially affects the renin-aldosterone system and urinary Na/K ratios, resulting in distinct genotype-phenotype relationships in PHA1 patients. Loss-of-function mutations are associated with a severe clinical course and age-dependent hyperactivation of the renin-aldosterone system. This feature is not observed in patients with missense mutations that reduce but do not eliminate channel function. Markedly reduced channel activity results in impaired linear growth and delayed puberty (PubMed:18634878). {ECO:0000269|PubMed:18634878}.	EDTA Blood Sample

Psöriasis, Karşı Koruma, 605606 (IL23R geni) (Tüm Gen Dizi Analizi) (Postnatal)	Psoriasis, protection against, 605606 (IL23R gene) (Sequence Analysis-All Coding Exons) (Postnatal)	IL23R	IL23R, IBD17	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	DISEASE: Inflammatory bowel disease 17 (IBD17) [MIM:612261]: A chronic, relapsing inflammation of the gastrointestinal tract with a complex etiology. It is subdivided into Crohn disease and ulcerative colitis phenotypes. Crohn disease may affect any part of the gastrointestinal tract from the mouth to the anus, but most frequently it involves the terminal ileum and colon. Bowel inflammation is transmural and discontinuous; it may contain granulomas or be associated with intestinal or perianal fistulas. In contrast, in ulcerative colitis, the inflammation is continuous and limited to rectal and colonic mucosal layers; fistulas and granulomas are not observed. Both diseases include extraintestinal inflammation of the skin, eyes, or joints. {ECO:0000269|PubMed:17068223, ECO:0000269|PubMed:17804789}. Most patients are asymptomatic for several years or even for decades and generally, the diagnosis is incidental to clinical investigations unrelated to the disease. Cases with early-onset or rapid progression are rare. A 'sandstorm-appearing' chest roentgenogram is a typical diagnostic finding. The onset of this potentially lethal disease varies from the neonatal period to old age and the disease follows a long- term, progressive course, resulting in a slow deterioration of lung functions. Pulmonary alveolar microlithiasis is a recessive monogenic disease with full penetrance. {ECO:0000269	PubMed:16960801}. Note=The disease is caused by mutations affecting the gene represented in this entry.	EDTA Blood Sample

Renal Hücreli Karsinom, 144700 (HNF1B geni) (Tüm Gen Dizi Analizi) (Postnatal)	Renal cell carcinoma, 144700 (HNF1B gene) (Sequence Analysis-All Coding Exons) (Postnatal)	HNF1B	HNF1B, TCF2, HNF2, MODY5, FJHN, HPC11	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	DISEASE: Diabetes mellitus, non-insulin-dependent (NIDDM) [MIM:125853]: A multifactorial disorder of glucose homeostasis caused by a lack of sensitivity to the body's own insulin. Affected individuals usually have an obese body habitus and manifestations of a metabolic syndrome characterized by diabetes, insulin resistance, hypertension and hypertriglyceridemia. The disease results in long-term complications that affect the eyes, kidneys, nerves, and blood vessels. {ECO:0000269	PubMed:12161522}. Note=Disease susceptibility may be associated with variations affecting the gene represented in this entry.	EDTA Blood Sample
Renal Hücreli Karsinom, 144700 (MLPA)	Renal cell carcinoma, 144700 (MLPA)	HNF1B	HNF1B, TCF2, HNF2, MODY5, FJHN, HPC11	MLPA (CNV)	EDTA'lı Kan (2-4 ml)		20	60	.	.	30	Postnatal	DISEASE: Diabetes mellitus, non-insulin-dependent (NIDDM) [MIM:125853]: A multifactorial disorder of glucose homeostasis caused by a lack of sensitivity to the body's own insulin. Affected individuals usually have an obese body habitus and manifestations of a metabolic syndrome characterized by diabetes, insulin resistance, hypertension and hypertriglyceridemia. The disease results in long-term complications that affect the eyes, kidneys, nerves, and blood vessels. {ECO:0000269	PubMed:12161522}. Note=Disease susceptibility may be associated with variations affecting the gene represented in this entry.	EDTA Blood Sample
Renal Hücreli Karsinom, 144700 (Kalıtsal Berrak Hücreli Renal Hücre Karsinomu) (RNF139 geni) (Tüm Gen Dizi Analizi) (Postnatal)	Renal cell carcinoma, 144700 (Hereditary clear cell renal cell carcinoma) (RNF139 gene) (Sequence Analysis-All Coding Exons) (Postnatal)	RNF139	RNF139, TRC8, RCA1	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	DISEASE: Renal cell carcinoma (RCC) [MIM:144700]: Renal cell carcinoma is a heterogeneous group of sporadic or hereditary carcinoma derived from cells of the proximal renal tubular epithelium. It is subclassified into clear cell renal carcinoma (non-papillary carcinoma), papillary renal cell carcinoma, chromophobe renal cell carcinoma, collecting duct carcinoma with medullary carcinoma of the kidney, and unclassified renal cell carcinoma. Clear cell renal cell carcinoma is the most common subtype. Note=The disease may be caused by mutations affecting the gene represented in this entry. A chromosomal aberration involving RNF139 has been found in a lymphoblastoid cell line established from a family with renal cell carcinoma and thyroid carcinoma. Translocation (3;8)(q14.2;q24.1) with FHIT. RNF139 is found to be fused to FHIT and disrupted within the steroi-sensing domain. In contrast, the FHIT coding region is maintained and expressed. Sporadic cases of renal carcinoma, where an acquired mutation in RNF139 results in the duplication of 12 nucleotides in the 5'-UTR, has also been identified.;	EDTA Blood Sample
Renal Hücreli Karsinom, 144700 (Kalıtsal Berrak Hücreli Renal Hücre Karsinomu) (HNF1A geni) (Tüm Gen Dizi Analizi) (Postnatal)	Renal cell carcinoma, 144700 (Hereditary clear cell renal cell carcinoma) (HNF1A gene) (Sequence Analysis-All Coding Exons) (Postnatal)	HNF1A	HNF1A, TCF1, MODY3, IDDM20	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	DISEASE: Hepatic adenomas familial (HEPAF) [MIM:142330]: Rare benign liver tumors of presumable epithelial origin that develop in an otherwise normal liver. Hepatic adenomas may be single or multiple. They consist of sheets of well-differentiated hepatocytes that contain fat and glycogen and can produce bile. Bile ducts or portal areas are absent. Kupffer cells, if present, are reduced in number and are non-functional. Conditions associated with adenomas are insulin-dependent diabetes mellitus and glycogen storage diseases (types I and 3). Note=The disease is caused by mutations affecting the gene represented in this entry. Bi-allelic inactivation of HNF1A, whether sporadic or associated with MODY3, may be an early step in the development of some hepatocellular carcinomas.	EDTA Blood Sample
Renal Hücreli Karsinom, 144700 (Kalıtsal Berrak Hücreli Renal Hücre Karsinomu) (MLPA)	Renal cell carcinoma, 144700 (Hereditary clear cell renal cell carcinoma) (MLPA)	HNF1A	HNF1A, TCF1, MODY3, IDDM20	MLPA (CNV)	EDTA'lı Kan (2-4 ml)		20	60	.	.	30	Postnatal	DISEASE: Hepatic adenomas familial (HEPAF) [MIM:142330]: Rare benign liver tumors of presumable epithelial origin that develop in an otherwise normal liver. G6PD Eksikliğine Bağlı Sıtmaya Direnç, 611162 (Sıtma) (G6PD geni) (Tüm Gen Dizi Analizi) (Postnatal)	Resistance to malaria due to G6PD deficiency, 611162 (Malaria) (G6PD gene) (Sequence Analysis-All Coding Exons) (Postnatal)	G6PD	G6PD, G6PD1	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	DISEASE: Anemia, non-spherocytic hemolytic, due to G6PD deficiency (NSHA) [MIM:300908]: A disease characterized by G6PD deficiency, acute hemolytic anemia, fatigue, back pain, and jaundice. In most patients, the disease is triggered by an exogenous agent, such as some drugs, food, or infection. Increased unconjugated bilirubin, lactate dehydrogenase, and reticulocytosis are markers of the disorder. Although G6PD deficiency can be life-threatening, most patients are asymptomatic throughout their life. {ECO:0000269	PubMed:1611091}. Note=The disease is caused by mutations affecting the gene represented in this entry. Deficiency of G6PD is associated with hemolytic anemia in two different situations. First, in areas in which malaria has been endemic, G6PD-deficiency alleles have reached high frequencies (1% to 50%) and deficient individuals, though essentially asymptomatic in the steady state, have a high risk of acute hemolytic attacks. Secondly, sporadic cases of G6PD deficiency occur at a very low frequencies, and they usually present a more severe phenotype. Several types of NSHA are recognized. Class-I variants are associated with severe NSHA; class-II have an activity <10% of normal; class-III have an activity of 10% to 60% of normal; class- IV have near normal activity.;	EDTA Blood Sample

The macules gradually darken and extend to the proximal regions of the extremities. The manifestations tend to progress until middle age, after which progression of the eruptions stops. The pigmentary augmentation is found on the flexor aspects of the wrists, neck, patella and olecranon. Other features include breaks in the epidermal ridges on the palms and fingers, palmoplantar pits, occasionally plantar keratoderma, and partial alopecia. {ECO:0000269	PubMed:23666529}. Note=The disease is caused by mutations affecting the gene represented in this entry.	EDTA Blood Sample
Retina Arter Anevrizması-Supravalvüler Pulmoner Stenoz, 614224, Otozomal Resesif; RAMSVPS (Ailesel Retinal Arter Makroanevrizması) (IGFBP7 geni) (Tüm Gen Dizi Analizi) (Postnatal)	Retinal arterial macroaneurysm with supravalvular pulmonic stenosis, 614224, Autosomal recessive; RAMSVPS (Familial retinal arterial macroaneurysm) (IGFBP7 gene) (Sequence Analysis-All Coding Exons) (Postnatal)	IGFBP7	IGFBP7, MAC25, RAMSVPS	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	DISEASE: Retinal arterial macroaneurysm with supravalvular pulmonic stenosis (RAMSVPS) [MIM:614224]: An autosomal recessive condition characterized by the bilateral appearance of 'beading' along the major retinal arterial trunks, with the subsequent formation of macroaneurysms. Affected individuals also have supravalvular pulmonic stenosis, often requiring surgical correction. {ECO:0000269	PubMed:21835307}. Note=The disease is caused by mutations affecting the gene represented in this entry.;	EDTA Blood Sample
Retina Arteler, Tortiosite, 180000, Otozomal Dominant; RATOR (Retinal Arter Tortiositesi) (COL4A1 geni) (Tüm Gen Dizi Analizi) (Postnatal)	Retinal arteries, tortuosity of, 180000, Autosomal dominant; RATOR (Retinal arterial tortuosity) (COL4A1 gene) (Sequence Analysis-All Coding Exons) (Postnatal)	COL4A1	COL4A1, PNREN1, HANAC, ICH, BSVD, RATOR	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	DISEASE: Porencephaly 1 (PNREN1) [MIM:175780]: A neurologic disorder characterized by a fluid-filled cysts or cavities within the cerebral hemispheres, neurologic manifestations, facial paresis, and visual defects. Affected individuals typically have hemiplegia, seizures, and intellectual disability. Porencephaly type 1 is usually unilateral and results from focal destructive lesions such as fetal vascular occlusion or birth trauma. {ECO:0000269|PubMed:15905400, ECO:0000269|PubMed:16107487, ECO:0000269|PubMed:19194877}. Note=The disease is caused by mutations affecting the gene represented in this entry.	EDTA Blood Sample
Retinal Kon Distrofisi 3, 610024, Otozomal Resesif, Otozomal Dominant; RCD3A (Akromatopsi) (PDE6H geni) (Tüm Gen Dizi Analizi) (Postnatal)	Retinal cone dystrophy 3, 610024, Autosomal recessive, Autosomal dominant; RCD3A (Achromatopsia) (PDE6H gene) (Sequence Analysis-All Coding Exons) (Postnatal)	PDE6H	PDE6H, RCD3, ACHM6	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	DISEASE: Cone dystrophy, retinal 3A (RCD3A) [MIM:610024]: A rare form of cone dystrophy associated with supernormal rod responses. The disorder is characterized by reduced visual acuity, photoaversion, night blindness, and abnormal color vision. At an early age, the retina shows subtle depigmentation at the macula and, later, more obvious areas of atrophy. {ECO:0000269	PubMed:15629837}. Note=The disease is caused by mutations affecting the gene represented in this entry.;	EDTA Blood Sample
Retinal Kon Distrofisi 3B, 610356, Otozomal Resesif; RCD3B (Kon Distrofisi-Süpernormal Rod Yanıtı) (KCNV2 geni) (Tüm Gen Dizi Analizi) (Postnatal)	Retinal cone dystrophy 3B, 610356, Autosomal recessive; RCD3B (Cone dystrophy with supernormal rod response) (KCNV2 gene) (Sequence Analysis-All Coding Exons) (Postnatal)	KCNV2	KCNV2, KV11.1, RCD3B	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	DISEASE: Cone dystrophy retinal 3B (RCD3B) [MIM:610356]: A rare form of cone dystrophy associated with supernormal rod responses. The disorder is characterized by reduced visual acuity, photoaversion, night blindness, and abnormal color vision. At an early age, the retina shows subtle depigmentation at the macula and, later, more obvious areas of atrophy. {ECO:0000269	PubMed:16909397}. Note=The disease is caused by mutations affecting the gene represented in this entry.;	EDTA Blood Sample

Retinal Kon Distrofisi 4, 610478, Otozomal Resesif; RCD4 (Progresif Kon Distrofisi) (CACNA2D4 geni) (Tüm Gen Dizi Analizi) (Postnatal)	Retinal cone dystrophy 4, 610478, Autosomal recessive; RCD4 (Cone rod dystrophy) (CACNA2D4 gene) (Sequence Analysis-All Coding Exons) (Postnatal)	CACNA2D4	CACNA2D4, RCD4	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	DISEASE: Retinal cone dystrophy 4 (RCD4) [MIM:610478]: Characterized by minimal symptoms except for slowly progressive reduction in visual acuity. (ECO:0000269	PubMed:17033974). Note=The disease is caused by mutations affecting the gene represented in this entry.;	EDTA Blood Sample
Retina Dejenerasyonu, Otozomal Resesif, Kıvırcık Pigment Tipi (NRL geni) (Tüm Gen Dizi Analizi) (Postnatal)	Retinal degeneration, autosomal recessive, clumped pigment type (NRL gene) (Sequence Analysis-All Coding Exons) (Postnatal)	NRL	NRL, D14S46E, RP27	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	DISEASE: Retinal degeneration autosomal recessive clumped pigment type (RDCP) [MIM:162080]: A retinopathy characterized by night blindness since early childhood, consistent with a severe reduction in rod function. Color vision is normal although there is a relatively enhanced function of short-wavelength-sensitive cones in the macula. Signs of retinal degeneration and clusters of clumped pigment deposits in the peripheral fundus at the level of the retinal pigment epithelium are present. (ECO:0000269	PubMed:15591106). Note=The disease is caused by mutations affecting the gene represented in this entry.;	EDTA Blood Sample
Retinal Dejenerasyon, Geç Başlangıçlı, Otozomal Dominant, 605670, Otozomal Dominant; LORD (Geç Başlangıçlı Retinal Dejenerasyon) (C1QTNF5 geni) (Tüm Gen Dizi Analizi) (Postnatal)	Retinal degeneration, late-onset, autosomal dominant, 605670, Autosomal dominant; LORD (Late-onset retinal degeneration) (C1QTNF5 gene) (Sequence Analysis-All Coding Exons) (Postnatal)	C1QTNF5	C1QTNF5, CTRP5, LORD	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	DISEASE: Late-onset retinal degeneration (LORD) [MIM:605670]: Autosomal dominant disorder characterized by onset in the fifth to sixth decade with night blindness and punctate yellow-white deposits in the retinal fundus, progressing to severe central and peripheral degeneration, with choroidal neovascularization and chorioretinal atrophy. (ECO:0000269|PubMed:12944416, ECO:0000269|PubMed:22892318). Note=The disease is caused by mutations affecting the gene represented in this entry.;	EDTA Blood Sample
Usher Sendromu Tip 2A, Retina Hastalığı, Modifiye Edici, 276901, Otozomal Resesif; USH2A (Usher Sendromu) (PDZD7 geni) (Tüm Gen Dizi Analizi) (Postnatal)	Retinal disease in Usher syndrome type IIA, modifier of, 276901, Autosomal recessive; USH2A (Usher syndrome) (PDZD7 gene) (Sequence Analysis-All Coding Exons) (Postnatal)	PDZD7	PDZD7	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	DISEASE: Usher syndrome 2C (USH2C) [MIM:605472]: USH is a genetically heterogeneous condition characterized by the association of retinitis pigmentosa with sensorineural deafness. Age at onset and differences in auditory and vestibular function distinguish Usher syndrome type 1 (USH1, Usher syndrome type 2 (USH2) and Usher syndrome type 3 (USH3). USH2 is characterized by congenital mild hearing impairment with normal vestibular responses. (ECO:0000269|PubMed:20440071). Note=The disease is caused by mutations affecting distinct genetic loci, including the gene represented in this entry. PDZD7 mutations have been found in combination with mutations in USH2A and GPR98 in patients affected by Usher syndrome, suggesting a role as contributor to digenic Usher syndrome or a modifier of retinal disease expression. (ECO:0000269|PubMed:20440071).;	EDTA Blood Sample
Retina Distrofi- Iris Kolobomu ± Katarakt, 616722, Otozomal Dominant; RDICC (MIR204 geni) (Tüm Gen Dizi Analizi) (Postnatal)	Retinal dystrophy and iris coloboma with or without cataract, 616722, Autosomal dominant; RDICC (MIR204 gene) (Sequence Analysis-All Coding Exons) (Postnatal)	MIR204	MIR204, MIRN204, RDICC	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	.	EDTA Blood Sample
Retina Distrofisi ve Obezite, 616188, Otozomal Resesif; RDOB (Retinitis Pigmentozaa) (TUB geni) (Tüm Gen Dizi Analizi) (Postnatal)	Retinal dystrophy and obesity, 616188, Autosomal recessive; RDOB (Retinitis pigmentosa) (TUB gene) (Sequence Analysis-All Coding Exons) (Postnatal)	TUB	TUB, RDOB	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	DISEASE: Retinal dystrophy and obesity (RDOB) [MIM:616188]: A disease characterized by obesity, night blindness, decreased visual acuity, and electrophysiological features of a rod cone dystrophy. (ECO:0000269	PubMed:24375934). Note=The disease is caused by mutations affecting the gene represented in this entry.;	EDTA Blood Sample
Retina Distrofisi, İnner Retina Disfonksiyonu ve Gangliyon Hücresi Anormallikleri, 616079, Otozomal Dominant; RDGCA (Retinal Distrofi-İç Retinal Disfonksiyon ve Ganglion Hücre Anomalileri) (ITM2B geni) (Tüm Gen Dizi Analizi) (Postnatal)	Retinal dystrophy with inner retinal dysfunction and ganglion cell abnormalities, 616079, Autosomal dominant; RDGCA (Retinal dystrophy with inner retinal dysfunction and ganglion cell anomalies) (ITM2B gene) (Sequence Analysis-All Coding Exons) (Postnatal)	ITM2B	ITM2B, BRI, ABRI, FBD, RDGCA	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	DISEASE: Cerebral amyloid angiopathy, ITM2B-related 2 (CAA-ITM2B2) [MIM:117300]: A disorder characterized by amyloid deposition in the walls of the blood vessels of the cerebrum, choroid plexus, cerebellum, spinal cord and retina. Plaques and neurofibrillary tangles are observed in the hippocampus. Clinical features include progressive ataxia, dementia, cataracts and deafness. (ECO:0000269|PubMed:10781099, ECO:0000269|PubMed:14656991, ECO:0000269|PubMed:16091362). Note=The disease is caused by mutations affecting the gene represented in this entry. A decamer duplication in the 3' region of ITM2B results in the production of the ADan amyloidogenic peptide (PubMed:10781099). ADan is generated by cleavage of the mutated precursor at the normal furin processing site. ADan accumulates in the brain and produces amyloid fibrils responsible for neuronal dysfunction and dementia. (ECO:0000269|PubMed:10781099).	EDTA Blood Sample
Retina Distrofisi, İnner Retina Disfonksiyonu ve Gangliyon Hücresi Anormallikleri, 616079, Otozomal Dominant; RDGCA (Retinal Distrofi-İç Retinal Disfonksiyon ve Ganglion Hücre Anomalileri) (Prenatal) (ITM2B geni) (Tüm Gen Dizi Analizi) (Prenatal)	Retinal dystrophy with inner retinal dysfunction and ganglion cell abnormalities, 616079, Autosomal dominant; RDGCA (Retinal dystrophy with inner retinal dysfunction and ganglion cell anomalies) (ITM2B gene) (Sequence Analysis-All Coding Exons) (Prenatal)	ITM2B	ITM2B, BRI, ABRI, FBD, RDGCA	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	Amniyon sıvısı / CVS / Heparinli ve EDTA'lı (İKİSİ BİRDEN) kordon kanı VE ANNEDEN EDTA'LI KAN		.	.	15	30	20	Prenatal	DISEASE: Cerebral amyloid angiopathy, ITM2B-related 2 (CAA-ITM2B2) [MIM:117300]: A disorder characterized by amyloid deposition in the walls of the blood vessels of the cerebrum, choroid plexus, cerebellum, spinal cord and retina. Plaques and neurofibrillary tangles are observed in the hippocampus. Clinical features include progressive ataxia, dementia, cataracts and deafness. Retinitis Pigmentoza 11, 600138, Otozomal Dominant; RP11 (Retinitis Pigmentoza) (PRPF31 geni) (Tüm Gen Dizi Analizi) (Postnatal)	Retinitis pigmentosa 11, 600138, Autosomal dominant; RP11 (Retinitis pigmentosa) (PRPF31 gene) (Sequence Analysis-All Coding Exons) (Postnatal)	PRPF31	PRPF31, PRP31, RP11	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	DISEASE: Retinitis pigmentosa 11 (RP11) [MIM:600138]: A retinal dystrophy belonging to the group of pigmentary retinopathies. Retinitis pigmentosa is characterized by retinal pigment deposits visible on fundus examination and primary loss of rod photoreceptor cells followed by secondary loss of cone photoreceptors. Patients typically have night vision blindness and loss of midperipheral visual field. As their condition progresses, they lose their far peripheral visual field and eventually central vision as well. {ECO:0000269|PubMed:11545739, ECO:0000269|PubMed:12923864, ECO:0000269|PubMed:8808602}. Note=The disease is caused by mutations affecting the gene represented in this entry.;	EDTA Blood Sample
Retinitis Pigmentoza 13, 600059, Otozomal Dominant; RP13 (Retinitis Pigmentoza) (PRPF8 geni) (Tüm Gen Dizi Analizi) (Postnatal)	Retinitis pigmentosa 13, 600059, Autosomal dominant; RP13 (Retinitis pigmentosa) (PRPF8 gene) (Sequence Analysis-All Coding Exons) (Postnatal)	PRPF8	PRPF8, PRPC8, RP13	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	DISEASE: Retinitis pigmentosa 13 (RP13) [MIM:600059]: A retinal dystrophy belonging to the group of pigmentary retinopathies. Retinitis pigmentosa is characterized by retinal pigment deposits visible on fundus examination and primary loss of rod photoreceptor cells followed by secondary loss of cone photoreceptors. Patients typically have night vision blindness and loss of midperipheral visual field. As their condition progresses, they lose their far peripheral visual field and eventually central vision as well. {ECO:0000269|PubMed:11468273, ECO:0000269|PubMed:11910563, ECO:0000269|PubMed:12714658, ECO:0000269|Ref.33}. Note=The disease is caused by mutations affecting the gene represented in this entry.;	EDTA Blood Sample
Retinitis Pigmentoza 14, 600132, Otozomal Resesif; RP14 (Retinitis Pigmentoza) (TULP1 geni) (Tüm Gen Dizi Analizi) (Postnatal)	Retinitis pigmentosa 14, 600132, Autosomal recessive; RP14 (Retinitis pigmentosa) (TULP1 gene) (Sequence Analysis-All Coding Exons) (Postnatal)	TULP1	TULP1, RP14, LCA15	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	DISEASE: Leber congenital amaurosis 15 (LCA15) [MIM:613843]: A severe dystrophy of the retina, typically becoming evident in the first years of life. Visual function is usually poor and often accompanied by nystagmus, sluggish or near-absent pupillary responses, photophobia, high hyperopia and keratoconus. {ECO:0000269|PubMed:15024725, ECO:0000269|PubMed:17962469}. Note=The disease is caused by mutations affecting the gene represented in this entry.;	EDTA Blood Sample
Retinitis Pigmentoza 17, 600852, Otozomal Dominant; RP17 (Retinitis Pigmentoza) (CA4 geni) (Tüm Gen Dizi Analizi) (Postnatal)	Retinitis pigmentosa 17, 600852, Autosomal dominant; RP17 (Retinitis pigmentosa) (CA4 gene) (Sequence Analysis-All Coding Exons) (Postnatal)	CA4	CA4, RP17	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	.	EDTA Blood Sample
Retinitis Pigmentoza 18, 601414, Otozomal Dominant; RP18 (Retinitis Pigmentoza) (PRPF3 geni) (Tüm Gen Dizi Analizi) (Postnatal)	Retinitis pigmentosa 18, 601414, Autosomal dominant; RP18 (Retinitis pigmentosa) (PRPF3 gene) (Sequence Analysis-All Coding Exons) (Postnatal)	PRPF3	PRPF3, HPRP3, RP18	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	DISEASE: Retinitis pigmentosa 18 (RP18) [MIM:601414]: A retinal dystrophy belonging to the group of pigmentary retinopathies. Retinitis pigmentosa is characterized by retinal pigment deposits visible on fundus examination and primary loss of rod photoreceptor cells followed by secondary loss of cone photoreceptors. Patients typically have night vision blindness and loss of midperipheral visual field. As their condition progresses, they lose their far peripheral visual field and eventually central vision as well. {ECO:0000269|PubMed:11773002, ECO:0000269|PubMed:12714658}. Note=The disease is caused by mutations affecting the gene represented in this entry.;	EDTA Blood Sample
Retinitis Pigmentoza 19, 601718; RP19 (Retinitis Pigmentoza) (ABCA4 geni) (Tüm Gen Dizi Analizi) (Postnatal)	Retinitis pigmentosa 19, 601718; RP19 (Retinitis pigmentosa) (ABCA4 gene) (Sequence Analysis-All Coding Exons) (Postnatal)	ABCA4	ABCA4, ABCR, STGD1, FFM, RP19, CORD3, ARMD2	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	DISEASE: Macular degeneration, age-related, 2 (ARMD2) [MIM:153800]: A form of age-related macular degeneration, a multifactorial eye disease and the most common cause of irreversible vision loss in the developed world. In most patients, the disease is manifest as ophthalmoscopically visible yellowish accumulations of protein and lipid that lie beneath the retinal pigment epithelium and within an elastin-containing structure known as Bruch membrane. {ECO:0000269|PubMed:19028736, ECO:0000269|PubMed:9295268}. Note=Disease susceptibility is associated with variations affecting the gene represented in this entry.	EDTA Blood Sample
Retinitis Pigmentoza 2, 312600, X'e Bağlı; RP2 (Retinitis Pigmentoza) (RP2 geni) (Tüm Gen Dizi Analizi) (Postnatal)	Retinitis pigmentosa 2, 312600, X-linked; RP2 (Retinitis pigmentosa) (RP2 gene) (Sequence Analysis-All Coding Exons) (Postnatal)	RP2	RP2	Tüm Gen Dizi Analizi/ Sequence Analysis-All Coding Exons	EDTA'lı Kan (2-4 ml)		30	120	.	.	60	Postnatal	DISEASE: Retinitis pigmentosa 2 (RP2) [MIM:312600]: A retinal dystrophy belonging to the group of pigmentary retinopathies. Retinitis pigmentosa is characterized by retinal pigment deposits visible on fundus examination and primary loss of rod photoreceptor cells followed by secondary loss of cone photoreceptors. Patients typically have night vision blindness and loss of midperipheral visual field.
